grand present; but afterwards, understanding that
I knew both of the money and of the circumstances
wherewith it was to be divided, they, fearing lest I

me a part. *Sheldon, Miracles of Antichrist, p. 161:

other words, to find how often the second may be
subtracted continually from the first, until nothing
remains, or, at least, until the number which re-
mains is less than the second. The first of these
numbers is called the *dividend*; the second the *di-
visor*; and the number which results from the
operation is called the quotient. *Encyclopedia
Metaphysica, Arithmetica.*

Nought can quench mine lily flaming side,
Nor sea of liquor ebb, nor lake of mire,
Nothing but death can do me to requite. *Idem*.
We do you to wit. *2 Corinthians*, viii. 1.

[This means, 'we make you to know;' wit being a verb preceded by *to*, like the verbs in the preceding extracts, the object being a pronoun, and either *make* or *cause* being capable of being substituted for *do*.]

3. In the following the exact equivalent is less clear, being *render* or *enact* in the first two instances. The third means 'according to their consciences,' the construction being obscure, inasmuch as *conscience* may possibly mean 'conscientious duty.'

My one, that is a herald and a prince,
Do a fair messenger to his kindly ones!

Shakespeare, Troilus and Cressida, i. 3.
Pindarus is come

To do you salutation from his master.

Idem, Julius Caesar, iv. 2.

If there be any good thing to be done,
That may to thee do ease, and grace to me,
Speak to me. *Shakespeare, Hamlet*, i. 1.

4. Thus far the power of *do*, as an active or transitive verb, is clear. In the following instances it takes the character of an intransitive or neuter one. Preceded by *have*, and followed by *with*, it means *finish*; in which case the noun is governed, not by the verb, but by the preposition; the verb being left without a case. In an ordinary word this would make it neuter at once; yet there is a notable difference between 'I have dealt with such a person,' and 'I have done with such a person.' In the former, *deal* means 'have acted as a dealer,' which is a very vague term. In the latter, *do* is by no means equivalent to 'be a doer.' This is because *do* is a word which conveys not only the special notion of *action*, but of some object acted on; so that 'I have done with them' means 'done what I had to do.' At any rate, it makes the doctrine that *done* is an active verb with its case understood a probable one. The word, then, if treated as one having a neuter character, is equivalent. Again, the notion of *end, finish, or conclude*, is conveyed by the form of the construction (that of the past participle) rather than by the meaning of the verb *do* itself, which has simply its first sense. To speak of an action as past, with the implication that it will not be reverted to (and this is always conveyed by the construction), is to pronounce it finished.

No man would make use of dissimulated parties to destroy one body, unless they were sure to master them when they had done with them.—*Bishop Stillingfleet*.

I have done with Chaucer, when I have answered some objections.—*Deplan*.

Having done with such amusements, we give up what we cannot disown. *Pope*.

5. In the following, the departure from a strict active sense, and the approach to a neuter, is clearer.

No man who hath to do with the king, will think himself safe, unless you be his good angel, and guide him.—*Idem*.

6. The doubts involved in the next construction require a reference to *Do*, from *dro-gan*; the sense being *fare*, be in regard to sickness or health.

Good woman, how *do'st* thou?—The better that it please your good worship to ask.—*Shakespeare, Merry Wives of Windsor*, i. 4.

Let twelve exhaust, that not one part remains;
It follows straight, that every twelfth confines
Two whole, and one half portion of the signs.
Crech.

This term is applied to the twelve houses, or parts
of the zodiac of the primum mobile, to distinguish
them from the twelve signs. *Dodecatemery* is also
a denomination some authors give to each of the

Dodge. v. n.

1. Use craft; deal with tergiversation; play
mean tricks; use low shifts.

If in good offices and due retributions we may not
be plucking and niggardly, it argues an earthly and
inhabitable mind, where we have apparently reason,
to bludge and *dodge* in the animals.—*Sir M. Hale, Contemplations*.

The consideration should make men grow weary
of *dodging* and shewing tricks with God.—*South, Sermons*, I. 358.

2. Shift place as another approaches.

Dodg'd with him his betwixt Cambridge and the Hall.

3. Play fast and loose; raise expectations

dance she has led me; she *dodged* with me above
thirty years.—*Addison*.

Dodo. s. [corruption of *Douvers*, and Dutch
rather than Portuguese, as may be seen in
the last extract. As the island, on its disco-
very, was uninhabited, the notion of its
being a native term is out of the ques-
tion.] Bird of remarkable configuration,
extinct within the last century, a native
of the Mauritius, and, according to
the latest views as to its affinities, as given
in an elaborate monograph by Strickland,
more akin to the Columbidae, dove or
pigeon family, than to any other.

The *dodo* is a bird the Dutch call *Walghvogel* or
Dod *voers*; her body is round and fat, which oc-
casioned her slow pace; or that, her corpulence.
*Sir T. Herbert, Relation of some Years' Travels
into Africa and the Great Asia*, p. 522.

The Dutch sailors called them *Walghvogel*, . . . In
1697, Willem sailed from Batavia . . . He makes re-
peated mention of *dod-voers*. . . It is not easy to
determine the date when the synonymous words
dodman, from which our name *dodo* is derived, and
Dodo, first . . . Verhaeren's voyage was pub-
lished; hence, how early it occurs under the current
form of *Dodo*. There is little doubt that the name
is derived from *dodvoer*, which, in the Dutch lan-
guage, means slaughter. *Dodvoer* not improbably a
real word among Dutch sailors analogous to our
lubber. . . Sir Thomas Herbert was the first to use
. . . *Dodo*. He tells us that it is a Portuguese word,
and, in fact, we find that *dodo*, in the last named
language, means foolish or simple. But none of the
Portuguese voyagers seem to have mentioned the
Dodo, or even visited Mauritius. . . The derivation
of the word *Dodo* is even still more obscure.—
Strickland, The Dodo and its Kindred.

Then but forbear your foal a little while,

done, let not the principal *doers* themselves be for-

2. Feat; action; goal or end.

The next degree was to mark all Zezanne's doings, speeches and fashions, and to take them into herself, as a pattern of worthy proceeding.—*Sir P. Sidney*.

3. Behaviour; conduct.

Never the earth on his round shoulders bare,
A maid trim'd up from high or low degree,
That in her doings better could compare
Mirth with respect, few words with courtesy.

Sir P. Sidney.

4. Conduct; dispensation.

Dangerous it were for the feeble brains of man to wade far into the doings of the Most High.—*Hooker, Ecclesiastical Polity*.

5. Stir; bustle; tumult.

Shall there be then, in the mean while, no doings?
—*Hooker, Ecclesiastical Polity*.

After such momentous doings, we are not yet in a condition of bringing France to our terms.—*Swift*.

Dole. *s.* [Fr. *d'hoit* = 1 of a penny.] Used metaphorically for any small piece of money.

When they will not give a dole to relieve a lame beggar, they will lay out ten to send a deaf Indian.—*Shakespeare, Twelfth, ii. 2.*

In Anna's was a soldier, poor and old,
Had drench'd a little purse of gold:
Tid'd with a tedious march, one luckless night,
He slept, poor dog! and lost it to a dole.

—*Pope*.
'And so, I suppose, this Miss Wyndham, his daughter, will have nothing at all?' 'Not a dole,' said he, starting and settling himself with his own feet, and the fair loss of his chair, on the floor again.—*Earl of Wyndham, ch. xvi.*

Dole. *s.* [root of *dole*—distribute.]
1. Act of distribution or dealing.

It was your presumption,
That in the dole of blows your son might drop.

Shakespeare, Henry 4, Part II, l. 1.

Each receives his ancient soul. —*Clearland*.
In general dole

2. Anything dealt out or distributed; allowance; share; lot.

But best some may hardly think, or thus expostulate with me after this dole, that who made you the last summer to dole about this dole of laughter and rejoicing, who no man thanks your loyalty for.—*Milton, Apology for Smectymnus*.

3. Provisions or money distributed in charity, at any time: (formerly at funerals more especially).

Our dole and funeral meals, if they be our own early provisions, will then spend the latter: *J. P. Taylor, Rule and Exercise of Holy Living, ch. iv. § 9*.

Clients of old were feasted; now a poor divided dole is dealt at the outward door,
Which by the hungry rant is soon dispatch'd.

Dryden, Juvenal's Satires.

Construction adjectival.
I know you were once could keep
The buttery-latch still lock'd, and save the chip-pings,

In the head of a troop stand as if he had been routed,
Dealing large doles of death.

Nothing is hard, by miracle restor'd,
He now be leading dole among his foes,
And over heaps of slaughter'd walk his way?

Happy man be his dole. Good luck to him.

Let every man bow his own way, and happy man be his dole.—*Beaumont and Fletcher, Wit at several Weapons*.

DOLG

{DOGMATIZING
DOLGOTE

Let us, that are unhurt and whole,
Fall on, and happy man be's dole.

Butler, Hudibras.

Dole. *s.* [from Lat. *dolor*.] Grief; lamentation.

Yonder they lie; the poor old man, their father,
making such pitiful dole over them, that all beholders take his part with weeping.—*Shakespeare, As you like it, l. 2*.

Here we, as two, with a defeated joy,
With mirth in funeral, and with dirge in marriage,
In equal scale weighing delight and dole,

Take to wife.
—*Hamlet, l. 2*.

They might hope to change
Torment with ease, and so sweet recompense
Dole with delight. —*Milton, Paradise Lost, iv. 602*.

Dole. *s.* [N. Fr.] Boundary: (this sense is yet used in some parts of England; a dole-stour in Norfolk is a landmark).

Cursed be he which translated the bounds and doles of his neighbour.—*Injunctions of Queen Elizabeth, 1534*.

Accursed be he, with Almighty God by Moses, who removeth his neighbour's dole and marks.—*Matthew, 18. 16*.

[*Dole*, *dole*, slips of pasture left between furrows of ploughed lands. (Bailey.) 'Cursed be he that translateth the bounds and doles of his neighbour.' (Injunction to Elizabeth in Brandy's English Antiquities.) A dole-wood is a wood in which the

shares of different proprietors are marked by doles or landmarks. Now the simplest division of property would be a strip of turf left unploughed. That Dutch, *dole*, a small ditch with the soil turned up beside it for a landmark; *andole*, *s.* to mark the division of property with a ridge and furrow. (Hermisch's Wörterbuch.) The word is probably at bottom identical with Welsh *twl*, a put, to divide; *twl*, a put, ditch; then the ditch and bank are made by digging on the one side the earth taken up from the other) applied both to ridge and furrow, and subsequently appropriated to either as accidental circumstances might determine. We find the same simplicity of meaning in *dole*; and *mole*, the term by which we designate the ditch of a castle, signifies in Italian the mound on which the castle is built.—*Wedgwood, Dictionary of English Etymology*.

Dole. *s.* Distribute as a dole; deal out.

He dealt out his morality in periodic apophegms.—*Lamb, Letter to Coleridge*.

Doleance. *s.* Grievance; complaint. *Rare*.

When first he spied my love. —*Sir P. Sidney*.

3. Dismal; impressing sorrow; dolorific.

Dolefully. *adv.* In a doleful manner; sorrowfully; dismally; querulously.

They tragically exaggerate the matters they take to be ill, and dolefully forebode worse, to cast a damp on their own spirits, and exasperate or deject all whom they can influence.—*B. Jenks, Sermon, November 5, 1894, p. 28*.

Dolesomeness. *s.* Attribute suggested by Dolefulness.

If the exceeding glory of heaven cannot counter-
vail the dolesomeness of the grave, what dost I be-
lieving?—*Bishop Hall, Meditations, Of Death*. (Ord 188.)

Doligote. *s.* This is entered in the Law Dictionaries, Tomline and Jacob, with little

more than the notice that it is the A.S. *doly* = wound, maim, scar, or similar bodily injury, and *hote* = penalty, fine, recompense for injury; the term being apparently Anglo-Saxon rather than English; or, at least, obsolete or rare in modern law. Dogbolt is, probably, a corruption of this, and, at the same time, a proof showing how early the true meaning of the word was lost. If this derivation be true, a 'dogbolt' lawyer was an action-seeking pettifogger, who first provoked an assault and then sued for damages.

Dolichocephalic. *adj.* [Gr. *δολιχός* = long, *κεφαλή* = head; as a new term it might conveniently be spelt with a *k*, *-cephalic*.] Long-headed; (term used in *Ethnology* to denote a head of the African type, i.e. one with its diameter from side to side notably shorter than its diameter from front to back; the opposite to *brachycephalic*.) To him Fitzinger we owe the terms *brachycephalic* and *dolichocephalic*.—*Rank, On a Systematic Mode of Craniometry.*

Dolichocephalism. *s.* Condition, or form, indicated by *Dolichocephalic*. (For example see next entry.)

Dolichocephalous. *adj.* Same as *Dolichocephalic*.

In the sciences of observation, 'it is the averages which afford the best evidence; they alone have an absolute value, and lead to positive results.' Now we find that the twenty-five skulls from long barrows have an average relative breadth of .71, which, according to the view here adopted, is all but absolutely *dolichocephalous*; whilst the twenty-five skulls from the round barrows have an average relative breadth of .81, which even exceeds the *brachycephalous* standard. The two classes differ nearly as much in their relative breadth as in their relative height. Of Hindu or Chinese skulls, of the *brachycephalic* type, we have, as characters, a race which, in this instance, by minimizing the skull of the one category with those of the other, it is possible to modify the averages to almost any extent, in proportion to the amount of admixture; and in this way to mask and confuse the actual results. Thus, if the two classes of skulls be in equal numbers, as in the table before us, the relative breadth would be .76, or almost exactly that of the oval or orthocephalic type; and so the *dolichocephalism* of the one, and the *brachycephalism* of the other, would be equally lost sight of in such a method of analysis. —*Dr. Thurman, On British and Danish Skulls, Memoirs, &c., Anthropological Society of London, p. 177: 1865.*

Dollite. *s.* Term of contempt for one who professes much and performs little. Great talkers are commonly *dollites*.—*Rich Richardson, Character Observations upon the Old & New, p. 28: 1655.*

Dollar. *s.* Foreign silver coin so called, varying from about two to five shillings in value, and current in Holland, Germany, Spain, and the United States of America.

He disbursed
Ten thousand dollars for our general use.
Shakspeare, Macbeth, l. 2.

Dollmaker. *s.* Maker of dolls. (For example see extract under Doll.)

Dolmen. *s.* In *Archæology*. Breton name for a chambered variety of cromlech.

This occipital flatness was characteristic of the skulls of ancient Gauls. It exists in many countries in the Galerie Anthropologique, at the Jardin des Plantes, and is quite obvious in some of those derived from the excavation of the dolmens at Menton, near Paris. . . . It might not be omitted to be mentioned here, that the late learned and excellent Swedish craniologist, Professor A. A. Retzius, designated this and the other brachycephalic skulls derived from the Menton dolmens, *basques*, *Arnaut*, *Rank*, *Budolf Kreyser*, *Nilsen*, and others had agreed in an erroneous manner, that all Western European in the oldest period was inhabited by a so-called Turanian race, who had brachycephalic skulls, of which the Finns and the Basques are the only representatives. On the discovery of many crania of this form among the ossuaries of the dolmens, at Menton, [he] remarked this . . . to be fully proved, and he subsequently treated it as an established fact, not boldly asserting that these were the skulls

of Basques, i.e. of the principal race now supposed to be represented by the Basques.—*B. Davis, On the Crania of the Ancient Britons, Natural History Review, no. 7, p. 251.*

Dolomite. *s.* In *Geology*. Magnesian limestone.

The great geological feature of the island is, however, the production of *dolomite*, and the various new forms arising from its disintegration. In the mountains, with the exception of occasional beds of *dolomite*, no more recent formations overlie it; from the period of its first upheaval, the gneiss has undergone no second metamorphism, and the *dolomite* covers it in these lofty altitudes is formed almost entirely by its decay. *Dolomite*, both crystalline and amorphous, are also found in a particular stratum of *dolomite* (Bullatite and Halatite, in which there is a peculiar copper-coloured mica with metallic lustre).—*Sir J. E. Tennant, Geology, pt. I, ch. I.*

Doloriferous. *adj.* Producing pain. Whether or not wine may be regarded in such *doloriferous* subjects in the joints.—*Whitaker, History of the Grapes, p. 74.*

This, by the softness and rarity of the fluid, is insensible, and not *dolorific*.—*Arbutnot, On the Effects of Air on human Bodies.*

Dolorous. *adj.* 1. Sorrowful; doleful; dismal; gloomy; depressing sorrow. We are taught by his example, that the presence of *dolorous* and dreadful objects, even in winds most perfect, may, as clouds, overcast all reasonable joy. —*Hooker, Ecclesiastical Polity.*

2. Painful. How doth thine own which torment thee, whilst thy whole body rests upon this forced and *dolorous* bed, till thy maimed feet bear their part in a new less effective suppuration! —*Bishop Hall, Contemplations, The Crucifixion.*

2. Lamentation; complaint. Never trouble him, either with asking questions, or finding fault with his melancholy; but rather fitting to his *dolour* dolorous discourses of their own and other folk's misfortune. —*Sir P. Sidney.*

3. Pain; pang. A mist *dolour* and bent upon somewhat that is good, doth avert the *dolour* of death. —*Racine.*

Dolphin. *s.* Cetaceous animal so called. Though the old genus *Dolphin* has now been broken down into no less than nine subdivisions, and there are many species in them, yet in the genus of *dolphin* proper the number of species amount to nearly twenty. . . . The general features which distinguish the common *dolphin* are few and simple. Their snout is considerably elongated, broad at the base, round at the extremity. . . . It used to be held that the common *dolphin* was an inhabitant of every sea throughout the world. . . . A very different opinion is now gaining ground, . . . the *dolphin* with 'its many tints of colours,' mentioned in many books and some by modern poets, is not this, but quite a different animal, . . . the beautifully coloured *Coryphæna Hippurys*, the *Dorado* of the Portuguese; and it would be well if its popular name were altogether dropped. —*Hamilton, Whales, in Naturalist's Library.*

Dolt. *s.* Heavy stupid fellow; blockhead; thickskull; loggerhead.

Let *dolt* in haste some altar fire erect To those high powers which idly sit above. —*Sir P. Sidney.*

Dametas, the most arrant *doltish* clown, that ever was without the privilege of a launce. —*Sir P. Sidney.*

If I have since felt lassitude and weariness at the common-place suppositions of these white-waisted wise-ones, relieved only by a sort of indication at the *doltish* stupidity of their fancies and calculations, I doubt very much whether I was ever so much worried in after-life by their elaborated nonsense as I was by Tom Hickson's conversation on the day to which I now refer. —*Theodore Hook, Gilbert Gurney, vol. II, ch. I.*

Doltishness. *s.* Attribution suggested by *Doltish*; folly; stupidity.

We have nothing but stupidity, unworthy of any close care; or some extreme show of *doltishness*, indeed, fit to lift up a loud laughter, and nothing else. —*Sir P. Sidney, Defence of Poetry.*

Dome. *s.* [see last extract.]

1. Building; house; fabric. Best be he call'd among men, Who to his God this column rais'd: Though lightning strikes the *dome* again, The man who built it shall be prais'd. —*Prior.*

2. Hemispherical arch; cupola.

And urns, and domes, and cells, and grottoes. —*Shakspeare.*

[It is doubtful how the term *dome* came to be applied to a cupola or vaulted roof. A cathedral is in Italian *domo*, in German *dom*, and a *dome* may be so called because it was the ornament of a cathedral church. A church in general was called *domus Dei*, the house of God, and probably the name was given to a cathedral church par excellence. On the other hand we find that the Greek *domos* was used for a roof. *Quid apud Latinos testatur, in Palestina enim et, Keryto-nou habet in Iovis cultibus sed domos, que domos vel Solaria, vel Mœnium vocant, et, plana tecta quo transverberantur sustinentur.* (St. Jerome in Berytus).—*Wadsworth, Dictionary of English Etymology.*]

Domebook. *s.* See Domesday.

Domesday. *s.* Element in the triple compound Domesday-book; a *proper*, rather than a *common*, term, but one requiring notice. One of its derivations is *domus Dei*, from being kept in an enclosure so called, i.e. *God's house*; and, if this be true, the present spelling is preferable, even on etymological grounds, to *Domesday*. But this origin is unsatisfactory; it being nearly certain that the *dome* is the ordinary *doom* = judgement. If so, the present spelling rests upon the word being a *proper*, rather than a *common*, term—*Domesday* being the original spelling. The meaning of *-day* is more doubtful. A *domesday* roll was probably a title-deed shown on certain court-days.

Domebook, liber iudicialis, [was] a book composed under the direction of Alfred, for the general use of the whole kingdom, containing the local customs of the several provinces of the kingdom. This book is said to have been extant as late as the reign of Edward IV., but is now lost. . . . *Domesday* or *Domesday-book* [is] a most ancient record, made in the time of William I., and now remaining in the Ex-

chequer, consisting of two volumes, a greater and a less. . . There is also a third book, which differs from the others more in form than in matter. . . And there is a fourth book, kept in the Exchequer, which is called *Domestick*, and, though a very large volume, is only an abridgement of the others. Likewise a fifth book is kept in the Remembrançe office in the Exchequer, which has the name of *Domestick*, and which is the very same with the fourth before mentioned. Our ancestors had many *domesticks*. . . The addition of *-ship* to this book was not made with any reference to the final day of judgment. . . There is an ancient roll in Chester Castle called *Domestick* roll. At York, Worcester, and other cathedrals, these registers or cartularies are called *Domestick* books.—*Townier, Low's History*. (Gauger.)

We learn from the Saxon Chronicle, that in the 10th year of king William's reign, an invasion was apprehended from Denmark. . . As soon as the danger was over, the king held a great council to enquire into the state of the nation; the immediate consequence of which was the compiling of the great survey called *Domestick* Book; which was finished the next year; and in the latter end of that very year the king was attended by all his nobility at Sarum, where all the principal landholders submitted their lands to the yoke of military tenure, became the king's vassals, and did homage and fealty to his person.—*Sir W. Blackstone, Commentaries*.

Domestically. adv. In a domestic manner; relatively to the domestic character or affairs; privately; not openly.

Domicle (s) the place where a man has his home. Personal property follows the person of the owner, and, on his decease, must be distributed according to the law of the country in which he was domiciled at the time of his death, and not according to the law of the country where such property is situate. The residence of a party for forty days constitutes a *domicle* as to jurisdiction in Scotland. —*Townier, Law Dictionary*. (Gauger.)

That wonderful people the Normans . . . had their *domicles* on the Mediterranean, and on either side of the British Channel. In the south they had become *mother-tongues*. . . In the north, on the other hand, as by adopting and *domicling* men of Roman

Italian cultivation, they had braced the intellect of the degenerate church to young energy, and had trained learned churchmen and theologians, Laurences and Anselms; so taking the form, the structure, the architectural science of Universal Latin Christendom, they gave it a grandeur, solidity, unswerving, even height, which might seem intended to confront a ruler element, more wild and tempestuous weather. —*Milman, History of Latin Christianity*, b. xiv. ch. v.

Domicled. part. adj. Having an abode.

Dorsum. *s.* [Lat. = back.] Ridge of a hill.

I know not if it had any connection with a similar ridge, which creeping through the deep south-east valley beneath the trench of the great escarpment on the brow of Catharine hill near Winchester, suddenly rises into a narrow *dorsum*.—*J. Warburton, History of the Parish of Kiblington*, p. 48.

Dorture. *s.* [Fr. *dortoir*; Lat. *dormitura* = sleeping-place, from *dormio* = sleep.] Dormitory.

He led us to a gallery like a *dorture*, where he showed us along the one side seventeen cells, very neat.—*Bacon*.

To a friar that lives, or to a monk in his *dortor*.—*Jerome Taylor, Dissuasive against Popery*, ch. ii. § 2.

Dory. *s.* [see last extract; the derivation from *juntura* being the true one.] Fish (Zeus Faber) so called.

Between the dorsal ribs extends an aponeurosis, the remains or homologous of the primitive thoracic investment of the abdomen in the lancelet and lamprey. In the salmon and dory the ribs continue to be attached to some of the parapophyses after they are bent down to form the broad canal and spine in the tail; and we derive the same striking evidence of the true nature of these inferior arches from the skeleton of the lunny, the dory, and some other fishes.—*Owen, Lectures on Comparative Anatomy*, lect. iii.

The dory or dorre contends with the haddock for the honour of bearing the marks of St. Peter's fingers, each being supposed to have been the fish out of whose mouth the apostle took the tribute money; lying on its sides, in proof of its identity, the marks of his finger and thumb. Another origin for the spots on the side of the dory has also been assigned. St. Christopher, in wading through an arm of the sea, bearing our Saviour, whence his name Christopher, is reported to have caught a dory, and to have left those impressions on his sides to be transmitted to all posterity as an eternal memorial of the fact. The name of dorre was therefore said to have been derived from the French *adorer*, 'worshipped.' Our common appellation is also said to be of foreign origin, and even with a second reference to St. Peter. The fishermen of the Adriatic call this fish *la jantura*, 'the caterpillar,' in allusion to the supposed keys of the gates of heaven, of which the needle is supposed to be the bearer; and in several countries of Europe the dory is called St. Peter's fish. The real origin of the English name for this fish may be questioned; but it is probably derived from the French *dorée*, or *jantura dorée*, in reference to its peculiar golden colour. At what time the epithet John became prefixed to the simple name of this fish, it might be difficult to ascertain; its name of dorre is at least as old as Merrett, who in his *Pinax Rerum Naturalium Britannicarum*, 1686, speaks of it as a dorre or a dory.—*Yarrell, British Fishes*.

Dose. *s.* [Fr.; Gr. *dos* = giving, or thing or quantity given.]

1. So much of any medicine as is taken at one time.

Our love is but a dotage, or a dream.

No plea was to be admitted to release from imprisonment; not the duty of the husband to the young wife, of the young wife to her husband; not that of the parents for the care of their children, nor of children for the care of their parents; infirmity, age, *dotage*, nothing excused, nothing mitigated the sentence.—*Milman, History of Latin Christianity*, i. 41, ch. i.

which affords not only good drink, being pierced,
but all things else that belong to the subsistence of
man.... It bears huge nuts, which have excellent

above, I happened to come upon a dotterel (*Charadrius Morinellus*), which flew from among stones,

flying to short distances. I shouted for two of my
companions, who had gone ahead towards the summit
of the mountain, and who returned accordingly.
Although it was evident the bird had a nest or

its charge.—*Macgillivray, Natural History of Dee Side and Braemar*.

2. Fish so called. See extract.

The gemmuous dragonet (*Callionymus lyra*), so called from its brilliant gemlike colours, was first described as a British fish by Dr. Tyson; . . . the second term, that of *dragonet*, was derived by Pennant from the trivial name attached to the second species, *draconula*; that name, in its turn, having probably been given, with a double reference to its speckled appearance, and also to the large winglike ventral and pectoral fins which induced Zeban, Selas, and others, to consider these species as allied to the flying fishes. When examining books to obtain local and provincial names for the various fishes to be included in this work, I find that I made the mistake of transferring the name of Gaudie to the Great Weaver, instead of to the gemmuous dragonet. The prevailing colour of this last-named fish is a golden yellow; it is called the Yellow Skulpin in Cornwall. The word *Dragonet* is so called probably from the dingy hue of its colours as compared with those of its generic companion.—*Farrill, British Fishes.*

Dragonblood is a resin, so named as to seem to have been imagined an animal production.—*Sir J. Hill.*

Take dragonblood, beat it in a mortar, and put it in a cloth with aqua vitæ, and strain them together.—*Præpar.*

Dragon's blood is a resinous substance which comes to us in small balls of the size of a pigeon's egg, sometimes in rods like the finger, sometimes in irregular cakes. . . . *Dragon's-blood* is chiefly used for tinging spirit and turpentine varnishes, for preparing gold lacquer, for tooth tinctures and powders, for staining marble, &c.—*Ure, Dictionary of Arts, Manufactures, and Mines.*

The natural secretion of the fruit of the Calamus Draco constitutes the best dragon's blood, a dark-coloured, odorous, insipid resin; a second and inferior kind is produced from the fruit from which the natural secretion has been removed by heat, and bruising; the third and most inferior kind appears to be the refuse of the last process. It is doubtful whether this article is procured from the plant by incisions as has been supposed. . . . Resinous matters have been yielded in abundance by some species [of Liliaceæ]. . . . Of these the most celebrated is *dragon's blood*, a tonic, astringent resin, sometimes employed in diarrhæa and passive hæmorrhages: it is yielded in part by the *Draconia Draco* from the surface of the leaves, and from the cracks in its trunk; this, however, is scarcely known to modern druggists, who sell the astringent resin of *Pterocarpus*. . . . The *Dalbergia montana* of Linnaeus yields a resin very similar to *dragon's blood*.—*Lindley, Vegetable Kingdom, Palmaceæ, Liliaceæ, and Fabaceæ.*

Drágon-tree. s. Tree producing the Dragonblood.

Two or three hundred years are estimated to form the extreme length of life in a date palm and many others. But when, as in the *dragon-trees*, the degree to which the stem will grow in diameter is indefinite, the age seems, as in exegesis, to be indefinite also. Thus a famous specimen of the *Draconia Draco*, of Orata, in Teneriffe, was an object of great antiquity so long ago as A. D. 1402, and is still alive.—*Lindley, Vegetable Kingdom, p. 90.*

Drágon. s. Soldier so called, originally mounted on horseback and armed with a dragon [Fr.] or kind of carbine.

Two regiments of dragons suffered much in the late action.—*Tait.*

I am persuaded that this most inhuman and barbarous persecution of the innocent French heretics, (as they miscall them,) will make all sober magistrates and the Pope and his party, who use such unchristian and antichristian means to make proselytes, and endeavour to bring men to the catholic faith (as they pretend) by dragons, and imprisonment; not by demonstrations and reasons out of Scripture.—*Bishop Barlow, Remains, p. 293.*

Many rules of imitating nature Aristotle drew
from Homer, which he fitted to the drama; furnish-

when it flourished under Aeschylus, Euripides, and
Sophocles.—*Dryden*.

Ho [Lycurgus] was the author of a regulation—the
precise nature of which is not sufficiently ascer-
tained to be stated here—for the better management
of the comic drama. But he conferred a more last-
ing benefit on his country, and on all posterity, by
another measure designed to honour and preserve
the memory and the works of the three great tragic
poets to whom Athens was indebted for so large a
part of her literary fame. The dramas of Sophocles
and Euripides, if not of Aeschylus, were still fre-
quently exhibited: they were acknowledged as the
most perfect models of dramatic poetry; but this
did not prevent them from undergoing a fate simi-
lar to that which has so often befallen the works of
our early dramatists: they were frequently interpo-
lated and mutilated by the actors.—*Thirlwall, History*
of Greece, ch. lvi.

Dripstone, . . . called also *Label*, *Weather-moulding*, *Water-table*, and *Hoodmould*, [is] a projecting tablet or moulding over the heads of doorways, windows, archways, niches, &c., in Norman and Gothic architecture. This member is manifestly derived from the upper or outer moulding of the Roman arch. . . . It cannot have been introduced to throw off rain, for it is used quite as much in internal as in external work. Hence such terms as *Dripstone*, &c., convey an erroneous idea. The term *Label* is borrowed from heraldry, and therefore, in strictness, is only applicable to the straight form which is used in perpendicular work, which resembles the heraldic label. The ancient English term for this member was *Hoodmould*, which is perfectly descriptive. This, as Mr. Wilson informs us, is still in use in Yorkshire, where many old masonic terms remain.—*Glossary of Architecture*, in voce.

Dugong. s. [?] Herbivorous cetaceous animal so called (Malicore Dugong).

The third and most interesting group of this order is that of Manatus, composed of such Cetacea as are herbivorous; that is, deriving their nourishment alone from vegetables. From this circumstance, they have been vulgarly called sea cows or sea horses, but they are better known by the name of Manatus, or *dugongs*. So closely do they resemble the seals, and more especially the walrus, that Linnaeus classed them in the same genus, and all naturalists admit their affinity. They are large animals, but much inferior to the whale. . . . They are provided with vestiges of claws at their extremities, which they use with tolerable dexterity in creeping and carrying their young ones. — *Strainson, Natural History and Classification of Quadrupeds*, § 180.

One of the most remarkable animals on the coast is the *dugong*, a phytophagous cetacean, numbers of which are attracted to the inlets from the bay of Calcutta to Adam's Bridge, by the still water and the abundance of marine algae in these parts of the gulf. The rude approach to the human outline observed in the shape of the head of this creature, and the attitude of the mother while suckling her young, holding it to her breast with one flipper, while swimming with the other, holding the heads of both above water, and when disturbed, suddenly diving and displaying her fish-like tail, — these, together with her habitual demonstrations of strong maternal affection, probably gave rise to the fable of the 'mermaid,' and thus that earliest invention of mythical physiology may be traced to the Arab seamen and the Greeks, who had watched the movements of the *dugong* in the waters of Mauret. Megasthenes records the existence of a creature in the ocean, near Taprobana, with the aspect of a woman; and *Ellen*, adopting and enlarging on his information, peoples the seas of Ceylon with fishes having the heads of Hens, partridges, and rams, and, stranger still, cetaceans in the form of satyrs. Statements such as these must have had their origin in the hairs which are set round the mouth of the *dugong*, somewhat resembling a beard, which *Ellen* and Megasthenes both particularise from their resemblance to the hair of a woman. — *Sir J. E. Tennent, Ceylon*, pt. ix. ch. vii. p. 555.

The *Minerva* . . . was a vessel of war belonging to the Dutch government, which had been chased by English cruisers into the neutral port of Bergen. There she had been purchased by a certain Lord of Kuhlhausen, who appears to have been some sort of continental sovereign, and who is always spoken of by Karl Stoward with much respect as an 'august person.' She sailed from Bergen to this potentate's private port of the river Dnie, and on her way she was captured by an English man-of-war. The Lord of Kuhlhausen claimed that she should be given up to him, but the 'august person' claimed in vain. . . . The *Minerva* was condemned . . . because the circumstances of the transfer were such as to raise the presumption that she would resume at the earliest opportunity the character of a Dutch man-of-war. The 'august person' was merely a *dummy* acting for the Dutch government.—*Saturday Review, September 3, 1864.*

Dampishness, s. Attribute suggested by Dampish; sadness; melancholy.

How many worthy Christians are there in the world who bear a part with in this just blame; who have yielded over themselves to a discommodious melancholy, and a sad dejection of spirit; partly through a natural disposition inclining to *dampishness*, and partly through the prevalence of temptation. *Bishop Hall, Christ Mystical.*

The colour of his skin was not quite black, but very tawny; and yet not an ugly, yellow, nauseous tawny, as the blackness and Virginians, and other natives of America are, but of a bright kind of a *dun* olive colour, that had in it something very agreeable, though not very easy to describe.—*De Foë, Life and Adventures of Robinson Crusoe.*

We have set *Dunce* in Bourde, and have utterly banished him Oxford for ever, with all his blind gloom. . . . And the second time we came to New College after we had declared your injunctions, we found all the great quadrant court full of the leaves of *Dunce*,

the wind blowing them into every corner. And there we found one Mr. Greenfield, a gentleman of Buckinghamshire, gathering up part of the same book leaves, as he said, throw with to make him sewers or bladders to keep the deer within his wood, thereby to have better cry with his hounds.—*Sirype, Ecclesiastical Memoirs*, l. 333. A word of uncertain etymology: perhaps from *dum*, Dutch, stupid, Dr. Johnson says. *Milnes* derives it from *dunus*, thick; Skinner from the Spanish, *lento*, stupid. None of these will be received. *Romanus* offers the Swedish, *dunser*, a heavy-footed man. In the margin of Mr. Horne Tooke's copy of Johnson's dictionary are these words: 'Perhaps a word of reproach first used by the Thomists, from *Duns Scotus*, their antagonist; but we must first find out when this word began to be used.' I had made a similar remark, many years since, and am enabled to strengthen it, by what Mr. Tooke had not met with, an example in point: 'They hate even to death all them that preach the pure words of God, vocal of all the dresses of Dunno learning and man's traditions.' Confutation of Nicholas Shaxton, 1540, sig. F. iii. See also A. Wood, *Pastor Conventus*, 1601, vol. i. col. 673. From *Duns Scotus*, the great leader of the schoolmen, called after him *Dunsmen* or *Duncemen*; and as they were violently opposed to classic studies in the revival of learning, the name of *Dunce* was given to an opposer of learning, or one slow at learning.—*Wedgwood, Dictionary of English Etymology*.

Canada... has by her high import duties raised
up against herself a protected manufacturing inter-
est. These duties... are now said to be imposed
only with a view to revenue... The duties have
been high enough to divert Canadian capital from
its natural investment in the opening up, improv-
ing, and settling a vast territory hitherto very
sparsely inhabited, and to turn it into the premature
creation of manufactures. This result has
of course been produced, not by the effect of the high
duties in raising a revenue, but by their effect in
keeping out foreign manufactured goods... If the
Canadian duties were low in amount, there would
be imported into Canada not only enough of better
and cheaper goods than she now obtains for her own
consumption, but for the consumption of a very
considerable portion of the United States. The
Canadian high duties are a great protection to the
United States against that vast and systematic
smuggling across the frontier which the American
tariff encourages... She must at length become
alive to the fact that duties do not raise three
revenue merely because those who impose them
declare that they are imposed with that purpose,
and that if the wealth of states and individuals
must arise from trade and commerce, the first care
of the state ought to be to leave trade and com-
merce unobstructed.—*Times, August 11, 1903.*

Dwarfish; minuteness of stature; little-

we are, either by the heels of our shoes, or by pat-
ents or seats, and the like inventions, which seek to
give an advantage of proberity and comeliness to
our stature; which, if shrink to a dwarfiness, and

Proper nouns, when familiarized in English,
dwindle to monosyllables; whereas in other lan-
guages they receive a softer turn, by the addition of
a new syllable.—*Adams.*

A contemporary writer, who was evidently well
acquainted with Ireland, asserted that the authors
of the report had valued the forfeited property in
Carlow at six times the real market price, and that
the two million six hundred thousand pounds, of
which they talked, would be found to shrink to
about half a million, which, as the exchanges then
stood between Dublin and London, would have
diminished to four hundred thousand pounds by the
time that it reached the English Exchequer.—*Mac-
aulay, History of England, ch. xxv.*

During the following summer and autumn, the
crops went on dwindling, and the cry of distress
from every county in the realm became louder and
more piercing.—*ibid., ch. xxi.*
From which mode of presenting the facts it will
become manifest not only that, as we all know, hy-
pothesis must precede induction; but further, that

if there are none.—*Herbert Spencer, Principles of
Psychology.*

seems to be that of 'is gone,' &c., where
the use of the copula gives the construction
the appearance of being that of an active
verb.

Dwindling. *part. adj.* Shrinking; losing bulk.

Physicians, with their milky cheer,
The love-sick maid and dwindling bean repair. *Gay.*

Dyad. *s.* [Gr. *δύω*, *δύω*, *δύω*.] Two units treated as one; pair; couple. *Rare.*

A point answers to a monad, and a line to a dyad, and a superficies to a triad.—*Cutworth, Intellectual System, p. 376.*

Dye. *v. a.* [A.S. *deagan.*] Tinge; stain; colour.

Moses speaks of a raiment dyed blue, and purple, and scarlet, and of sheepskins dyed red. . . . Tyre, however, was the nation of antiquity which made dyeing its chief occupation and the staple of its commerce. . . . Homer marks no less the value than the antiquity of this dye by describing his heroes as arrayed in purple robes. . . . Dyeing was little cultivated in ancient Greece. . . . Dyeing baths are copper heated directly by a furnace, or by means of steam conducted by a pipe from a boiler at a certain distance from the bath. . . . Those dyestuffs . . . whose colouring matter is of the nature of extractive or apothecary, form a fæder combination with stuffs. Thus the yellow, fawn, and brown dyes, which contain tannin and extractive, become oxygenated by contact of air, and insoluble in water; by which means they can impart a durable dye.—*Ure, Dictionary of Arts, Manufactures, and Mines, Dyeing.*

Dye. *s.* Colour effected by, or material used for, dyeing.

(For example see extract under preceding entry.)

Dyebath. *s.* Bath, vat, or cistern for dyeing.

(For example see extract under Dye.)

Dyédug. *s.* Drug for dyeing.

(For example see extract under Dyestuff.)

Dyehouse. *s.* House or establishment for dyeing.

(For example see extract under Dyestuff.)

Dyeing. *verbal abs.* Act of one who dyes; process for obtaining a dyer's colour.

Archil is, in general, a very useful ingredient in dyeing; but as it is rich in colour, and communicates an alluring bloom, dyers are often tempted to abuse it, and to exceed the proportions that can add to the beauty without, at the same time, in a dangerous manner, affecting the permanence of the colour. . . . The lichen must be of the third year's growth to yield an abundant dye; and that which grows near the sea is the best. . . . Since more solid dyes of the same shade have been invented, the archil has gone much into disuse.—*Ure, Dictionary of Arts, Manufactures, and Mines, Archil.*

I conceive much light would be given to the philosophy of dyeing, by careful experiments of the weight added by each drug or salt, in dyeing of every colour.—*Sir W. Petty, Sprat's History of the Royal Society, p. 305.*

Dyeing. *part. adj.* Fit or liable to be used as dyes; constituting or forming part of a dye.

Some dyeing ingredients or drugs, by the coarseness of their bodies, make the thread of the dyed stuff seem coarser.—*Sir W. Petty, Sprat's History of the Royal Society, p. 303.*

Dyer. *s.* One who dyes. See Dye.

Verdigrise is used by them dyers in their yellow and greenish colours.—*Sir W. Petty, Sprat's History of the Royal Society, p. 293.*

Dyestuff. *s.* Raw material for dyeing.

This invaluable blue dyestuff, for which no tolerable substitute has been found, was known to the ancients as a pigment under the name of Indicum, whence its present denomination. . . . Its general use in the dye-houses of both England and France was kept back by absurd laws founded upon an opinion that it was a fugitive dye-dye, and even pernicious to the fibre of wool. The plants which afford this dye-dye grow in the East and West Indies, in the middle regions of America, in Africa, and Europe. They are all species of the genera Indigofera, Indigo, and Nerium.—*Ure, Dictionary of Arts, Manufactures, and Mines, Indigo.*

Dying. *verbal abs.* Act of that which dies; passage from life to death: (common with day in a construction either adjectival, or that of the first element in a compound. This word has, even by high authorities, been treated as a participle or participial adjective. In such expressions as 'a dying man,' this is really the case, but not in the construction under notice).

And this for law I will maintain
'Till my dying day, sir,
That whatsoever king shall reign,
'I'll be the vicar of Bray, sir.

Old Song.

Dyingly. *adv.* In a dying manner; solemnly as if dying. *Rare.*

I can dyingly, and boldly, say,

I know not your dissonance.

Beaumont and Fletcher, Love's Pilgrimage.

Dyke. *s.* [the use of *y* in the spelling of this word is Dutch, and, as many of the great English drains were made under the direction of Dutch engineers, the word, in some cases, has been introduced under this form. As such, it is generally a proper, rather than a common, name. For the original English form, derived, along with ditch, from the A.S. *dic*, is most properly spelt with *i*; any instances to the contrary having arisen out of a confusion between the two concurrent forms.] In the following extract it means the embankment rather than the depression.

Then the whole Greek army poured into the town by the moles or dykes which they had thrown across from the main land to the shore of Motza, and the place was taken by storm.—*Arnold, History of Rome, ch. xxi.*

Dynámic. *adj.* [Gr. *δυναμική* = invested with power, acting as a power or force, *ἐνέργεια*.] Having the character of a force.

Magnetism, as was proved by the important discovery of Faraday, will produce electricity, but with this peculiarity, that in itself it is static; and therefore, to produce a dynamic force, motion must be superadded to it; it is, in fact, directive, not motive, altering the direction of other forces, but not, in strictness, initiating them.—*Grove, Correlation of Physical Forces.*

Dynamical. *adj.* Same as Dynamic: (of which it is the commoner, though not the more correct, form).

That relation between object and subject which is established the act of

three distinct aspects, according as there is some species of activity on the part of the object; on the part of the subject; or on the part of both. If, while the subject is passive, the object is working an effect upon it, . . . there results in the subject, a perception of what is usually termed a secondary property of body; but what may be better termed a dynamical property. If the subject is directly acting upon the object by grasping, thrusting, pulling, or any other mechanical process; and the object is reacting, as it must, to an equivalent extent; the subject perceives those variously modified kinds of resistance which have been raised as the secondary-primary properties; but which I prefer to class as static-dynamical. And if the subject alone is active . . . then the property perceived is of the kind commonly known as primary, but here named statical. . . . Beginning with these contingent attributes as contemplated in themselves, let us, in the first place, consider the property of classing them as dynamical. The most familiar ones are obviously manifestations of certain forms of force. Of sound, we know, not only that it becomes sensible to us solely through vibrations of the membrane tympani—not only that these vibrations are caused by waves in the air; but we know that the body whence they proceed must be thrown into a vibratory state by some mechanical force: that it must propagate undulations through surrounding matter—and that in this purely dynamical action resides the production of sound. Respecting heat, . . . its multiplied phenomena are resolved into dynamical ones.—*Herbert Spencer, Principles of Psychology, ch. x. § 48.*

Dynamics. *s.* [for the final *s*, see Chromatics.] Doctrine or study of force or forces; that part of mechanics which deals with forces in action, as opposed to forces in equilibrium.

The treatise of Galileo, *De la Scienza Meccanica*, . . . is chiefly confined to statics, or the doctrine of equilibrium; it was in his dialogues on motion, *De la Nuova Scienza*, published in 1686, that he developed his great principles of the science of dynamics, the moving force of bodies. . . . Still less was known of the principles of dynamics than of those of statics, till Galileo came to investigate them. The acceleration of falling bodies, whether perpendicularly or on inclined planes, was evident; but in what order this took place, no one had succeeded in determining, though many had offered conjectures. He showed that the velocity acquired was proportional to the time from the commencement of falling.—*Hollam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries, pt. iii. ch. viii. § 38, 39.*

It appears from our history, that certain truths concerning the equilibrium of bodies were established by Archimedes—that, after a long interval of inactivity, his principles were extended and pursued further in modern times;—and that to these

doctrines concerning equilibrium and the forces which produce it, which constitute the science (*statics*) were added many other doctrines concerning the motions of bodies, considered also as produced by forces, and thus the science of *dynamics* was produced. The assemblage of these sciences composes the province of *Mechanics*. Moreover, philosophers have laboured to make out the laws of the equilibrium of fluid as well as solid bodies; and hence has arisen the science of *Hydrostatics*. And the doctrines of *Mechanics* have been found to have a most remarkable bearing upon the motions of the heavenly bodies; with reference to which, indeed, they were at first principally studied. The explanation of these essential facts by means of mechanical principles and their consequences, forms the science of physical astronomy. These are the principal examples of mechanical science; although some other portions of Physics, as *Acoustics* and *Electro-dynamics*, introduce mechanical doctrines very largely into their speculations.—*Whewell, History of Scientific Ideas, b. iii. ch. i.*

The empirical laws of society are of two kinds: some are uniformities of co-existence, some of succession. According as the science is occupied in ascertaining and verifying the former sort of uniformities or the latter, M. Comte gives it the title of *Social Statics*, or of *Social Dynamics*; conformably to the distinction in mechanics between the conditions of equilibrium and those of movement; or in biology, between the laws of organization and those of life. The first branch of the science ascertains the conditions of stability in the social union: the second, the laws of progress. *Social Dynamics* is the theory of society considered in a state of progressive movement; while *Social Statics* is the theory of the consensus already spoken of as existing among the different parts of the social organism.—*J. S. Mill, System of Logic.*

Dynamometer. *s.* [Gr. *δύναμις* = power, and *μετρον* = measure.] Instrument for measuring power: (its application various, e.g. to the muscular power of animals and the force of steam; its construction varying accordingly).

The experiments with the Rafter and Aloeta give more precise results. . . . The power exerted by the engine of both vessels was ascertained by the indicator. The thrust also upon the screw shaft was ascertained by the dynamometer, an instrument consisting of a combination of levers, like a weighing machine for carts, in which a small weight balances a heavy pressure. . . . In some cases the dynamometer consisted of a shaft and lever, the end of which is pressed by a spiral spring, and in other cases there is a combination of levers, by which the same purpose is subverted.—*Bourne, Treatise on the Screw Propeller, ch. iv.*

Dynast. *s.*

1. Ruler; governor.

The ancient family of Des Ewes, *dynasts* or lords of the dition of Kewell. *J. Wood, Athens Quenens, i. col. 110: ed. 1822.*

2. Dynasty; government: (if it be not a misprint).

It might give some account for the heroic times of those Egyptian *dynasts*, pretending antiquity many years further back into the chaos than the Moslem hegemony.—*Gregory, Posthumus, p. 112: 1673.*

Dynastic. *adj.* Relating to, or consisting of, a dynasty; resting on the power of royal or ruling individuals, as opposed to the general sense of the community.

Prussia, ever mindful of strengthening her dynastic alliances, was connected with Russia too closely to hesitate.—*S. Edwards, The Polish Captivity.*

Dynasty. *s.* [Gr. *δυναστία*; Fr. *dynastie*.]

1. Government; sovereignty.

Some account him fabulous, because he carries up the Egyptian *dynasties* before the flood, yea, and long before the creation.—*Sir M. Hale, Origin of Mankind.*

2. Race or family of rulers; epoch constituted by their reigns.

This was the light put into the hands of the next dynasty of theologians, the schoolmen.—*Barrow, On the Fathers, p. 18.*

Dys- [Gr. *δύς*, a syllable only found in composition, wherein it suggests a notion of badness, as opposed to *εὖ*, suggestive of goodness. See Eu-.]

Dyscrasy. *s.* [Gr. *δυσκρασία*.] Unequal mixture of elements in the blood or nervous juices; distemperature, when some humour or quality abounds in the body.

I will somewhat write of two *dyscrasies* of the body.—*Sir T. Elyot, Castel of Helthe, b. 3: 1541.*
It is but a disease and *dyscrasy* in the soul.—*Cutworth, Sermons, p. 81: 1673.*

In this pituitous *dysenteria* of blood, we must vomit off the pituita, and purge upon intermissions.—*Sir J. Floyer, Præternatural State of the animal Humours.*

Dysenteria. *adj.* Relating to, constituting, or constituted by, Dysentery.
(For example see first extract under Dysentery.)

Dysentericus. *adj.* Dysenteric. *Rare.*
All will be but as delicate meats dressed for a *dysentericus* person, that can relish nothing, can retain nothing, receiveth no strength from them, is but the worse for them.—*Gualter, p. 180. (Ord 318.)*

Dysentery. *s.* [Gr. *δυσεντερία* = bad condition of the intestines, *εντεριον*.] In *Medicine*. Disease so called; looseness, where-in very ill humours flow off by stool, and are also sometimes attended with blood.

Dysentery was at least as prevalent in ancient as it has been in modern times. It is noticed by Hippocrates, Celsus, and particularly by Aretæus and Galen. The ancients were even not far wrong in their opinions respecting the seat of this disease, which they referred to the internal coats of the intestines, but attributed it too generally to erosion and ulceration. . . . The forms of *dysentery* are extremely diversified. . . . Sthenic *dysentery* presents various states and grades of severity, depending upon the nature of the cause, the state of the secretions, and the degree of inflammatory irritation or of spasmodic action of the bowels resulting therefrom. It may be preceded by constipation, or by diarrhoea; or the *dysenteric* symptoms may appear from the first, and be attended by chills or rigors. . . . In the dark races, *dysentery* is perhaps the most prevalent and fatal disease; and in negroes it generally takes the place of fever, being, in the language of Sydenham, a low fever turned in upon the bowels. . . . Of the influence of exhalations from animal bodies in a state of decomposition, in causing the low forms of *dysentery*, I could produce, if my limits would permit, numerous proofs. Of the agency of impure water in producing *dysentery*, proofs are likewise numerous. I have myself seen several instances, in a warm climate, where it was the cause of the disease being epidemic there. In temperate countries, waters containing decayed animal matters, or an excess of uncombined alkali, cause diarrhoea more frequently than *dysentery*, or the former passing into the latter. But in warm climates, especially where water is collected and preserved in tanks,

and in autumn, after warm summers, in colder countries, *dysentery* is the most common result. I have no doubt that the *dysenteric* epidemic in London, during several successive autumns after the Great Plague, was owing to the same causes.—*Copland, Dictionary of Practical Medicine.*

From what has been said, it will be apparent that, compared with continental India, the securities for health in Ceylon are greatly in favour of the island. As to the formidable diseases which are common to both, their occurrence in either is characterized by the same appalling manifestations; *dysentery* fastens, with all its fearful concomitants, on the unwary and incautious, and cholera, with its dark horrors, sweeps mysteriously across neglected districts, exacting its hecatombs.—*Sir J. E. Tennant, Ceylon, pt. I. ch. ii.*

Dyspepsia. *s.* [Gr. *δυσπεψία*, from *πένω* = connect, in the sense of digest.] Indigestion.

Dyspepsia or indigestion [is] impaired or fastidious appetite; slow and difficult digestion; sensations of discomfort referrible to the stomach, and frequently coexistent. *Dyspepsia* or indigestion has been employed as the generic designation of several disorders ranked under it as species, by most modern writers, and particularly by Sauvages and Cullen. Young and Good have limited the meaning of the term, by considering some of those disorders as altogether distinct from it. Dr. Todd, however, in an able and comprehensive article on the subject, has applied this term to all the functional disorders of the alimentary canal. . . . The continued or chronic form of *dyspepsia* may take place gradually or slowly, or as a consequence of the foregoing. . . . In the slightest states of irritative *dyspepsia*, the appetite is often increased, occasionally voracious, in some instances impaired; thirst is generally present, and burning or heat of the soles of the feet and palms of the hands frequently occurs, particularly in warm or temperate weather. . . . *Dyspepsia* may terminate in a restoration of the healthy function of digestion; it may pass into more severe functional or structural disease of the stomach; it may superinduce disease of the liver, bowels, and other collaterals organs; it may give rise to affections of remote organs or tissues; and, lastly, it may cause functional disorder of the heart. . . . But neglected *dyspepsia* is most frequently followed by inflammatory action, and its consequences, in the villous coat of the stomach. . . . In both sexes, cutaneous eruptions either originate in, or are perpetuated by, *dyspeptic* dis-

orders, and by the state of the circulating fluids and of the cutaneous exhalation consequent upon them.—*Copland, Dictionary of Practical Medicine.*

Dyspeptic. *adj.* Characteristic of, consisting in, or relating to, indigestion.
(For example see extract under Dyspepsia.)

Dyspeptic. *s.* Dyspeptic person.
Habitual *dyspepsia*, and those affected by hepatic obstructions, had better avoid a lengthened sojourn in Ceylon; but the tortures of rheumatism and gout, if they be not reduced, are certainly postponed for longer intervals than those conceded to the same sufferers in England.—*Sir J. E. Tennant, Ceylon, pt. I. ch. ii.*

Dysphagia. *s.* [Gr. *δυσφαγία* = inability to eat, or difficulty in eating; from *φαγω* = eat.] In *Medicine*. Difficulty in swallowing.

Inability to swallow, *dysphagia*, is another of the hysterical vagaries relating to the parts about the throat.—*Watson, Lectures on the Principles and Practice of Physic, lect. xxxviii.*

Dyspnoea. *s.* [Gr. *δυσπνοία*, *πνέω* = breathe.] Difficulty in breathing.

Dyspnoea, difficulty of respiration, is one of the most prominent of these symptoms. . . . In *dyspnoea*, the breathing is almost always most difficult when the patient is lying flat on his back. One reason for this is plain. In the supine horizontal posture the action of the diaphragm is obstructed by the weight and pressure of the adjacent abdominal viscera, and the erect position obviates this. Upright breathing, orthopnoea, has come to be considered a distinct modification of *dyspnoea*. The patient cannot lie down.—*Watson, Lectures on the Principles and Practice of Physic, lect. xxxviii.*

Dysuria. *s.* Difficulty in passing urine.

Sometimes pain and difficulty in making water are added; there is *dysuria*, the irritation of the rectum being reflected upon the bladder through the lower portion of the spinal cord.—*Watson, Lectures on the Principles and Practice of Physic, lect. xxxiii.*

Dysuria. *s.* [Gr. *δυσουρία*; from *αίσις* = pass urine.] Difficulty in making urine.

It doth ent in a dysouric, pain of the hemorrhoids, inflammation of any of the lower parts, diabetes, a continual pissing, or a hot dysuria, difficulty of making water.—*Harey.*

E.

E

E The fifth letter in the English alphabet.

Except that it began with *H* (i. e. was aspirated), the Hebrew name was the same as the English, viz. *He*. This became in Greek, *ἑ φάλας* = bare or naked *E*, as distinguished from *Eta*, which, word for word, is Aitch, the name of the English aspirate; but upon which we may remark that it begins with *A* instead of *H*. Putting these together, we may treat *E*, when under notice as the name of a letter, as the Hebrew *He* divested of its initial aspirate; in which case it is in the same category with *Aitch* and *Zed*; these being English forms of *Eta* and *Zeta*, and, as such, exceptional to the general rule concerning the names of the elements of the English alphabet, which is that they are approximations to the several sounds they are intended to suggest, rather than actual names, i. e. that they are in the category of *A B D*, rather than in that of *Alph, Beth, Daleth*, or *Alpha, Beta, Delta*. The remarkable point, however, in *E*, is that the two methods coincide; *E* being in respect to its form the sound of the *ee* in *feet*, the Hebrew *He*, minus *H*, or the Greek *ἑ φάλας* minus the que''fying adjective, indifferently. In An-

glo-Saxon, when preceded by a vowel, it was often sounded as *y*.

Each. *pron.* [A.S. *ælc*.—see *Such* and *Which*.] Every one of any number. See *Either*.

Though your orbs of different greatness be,
Yet both are for each other's use dispos'd;

Loveliest of women! heaven is in thy soul;
Beauty and virtue shine for ever round thee,
Bright'ning each other! Thou art all divine!
Addison, Cato.

The cases questioned are, for the most part, such as you will confess, before the suspicion of anti-Christian apostasy, to have been *eachwhere* in the church.—*Bishop Hall, Remains, p. 300.*

Eager. *adj.* [Fr. *aigre*; Lat. *acer*.]

1. Vehement; ardent; struck with desire; keenly desirous; vehement in desire; hotly longing.

Apt as well to quicken the spirits as to allay that which is too eager.—*Hooker, Ecclesiastical Polity, b. v. § 38.*

Nor do the eager clamours of disputants yield more relief to calipied truth, than did the sounding

With joy th' ambitious youth his mother heard,
And eager for the journey soon prepar'd;
He long'd the world beneath him to survey,
To guide the chariot, and to give the day. *Dryden.*

With in.

And eager on it; but he must be spur'd. *Addison, Cato.*

2. Sharp; sour; acid.

And eard, like eager droppings into milk,
The thin and wholesome blood. *Shakespeare, Hamlet, i. 3.*

3. Keen; severe; biting.
The air bites shrewdly; it is very cold.—
It is a whipping and an eager air. *Shakespeare, Hamlet, i. 4.*

The resistance of bone to cold is greater than of flesh; for that the flesh shrinks, but the bone resisteth, whereby the cold becometh more eager.—*Baron, Natural and Experimental History.*

4. Brittle; inflexible; not ductile. *Technical.*

Gold will be sometimes so eager, as artists call it, that it will as little endure the hammer as glass itself.—*Locke.*

Eagerly. *adv.* In an eager manner.

1. With ardour or vehemence.

Who having some advantage on Octavius,
Took it too eagerly. *Shakespeare, Julius Caesar, v. 3.*
To the holy war how fast and eagerly did men go,
when the priest persuaded them that whosoever died
in that expedition was a martyr!—*South, Sermons.*

3. Keenly; sharply.
Abundance of rain froze so eagerly as it fell, that
it seemed the depth of winter had of a sudden been
come in.—*Knales, History of the Turks.*

Eageriness. *s.* Attribute suggested by
Eager; keenness of desire; ardour of in-
clination; desire; cupidity; greediness;
haste; impatience.

She knew her distance, and did angle for me,
Maddening my eagerness with her restraint.

Shakespeare, All's well that ends well, v. 3.
Have you not seen, when whilst from the flat,
Some falcon stoop'd at what her eye design'd,
And, with her eagerness, the quarry mis'd?

It fluids them in the eagerness and height of their

1. Large raptorial bird so called, chiefly of the
genus *Aquila*, some species being native.

His majesty and this
Our majesty Macbeth and Banquo?—*Yes,*
As sparrow eagles, or the hure the lion.

Shakespeare, Macbeth, l. 2.
Draw forth the monsters of th' abyss profound,
Or fetch th' aerial eagle to the ground.

Pope, Essay on Man.

2. Standard of the ancient Romans.
Arts still follow'd where Rome's eagles flew. *Pope.*

Eagle-eyed. *adj.* Sharp-sighted as an eagle.
As he was rarely quick and perspicacious, so was
he inwardly eagle-eyed, and perfectly versed in the
innuendoes of his subjects.—*Hosell, Vocal Farcical.*
Every one is eagle-eyed to see
Another's faults and his deformity.

Dryden, Persius's Satires, sat. iv.

Eaglestone. *s.* Stone, within another, said
to be found at the entrance of the holes in
which the eagles make their nests, and
affirmed to have a particular virtue in de-
fending the eagle's nest from thunder. See
Grade.

If you stop the hole of a hawk's bell, it will make
no buzz, but a flat noise or rattle; and so doth the
reticle, or eaglestone, which hath a little stone within
it.—*Bacon, Natural and Experimental History.*

The eaglestone contains, in a cavity within it,
a small loose stone, which rattles when it is shaken;
and every fossil, with a nucleus in it, has obtained
the name. The sort of analogy that was supposed
to be between a stone, thus containing another
within it, or, as the fanciful writers express it, pre-
sented with another, and a woman lie with child, led
people to imagine that it must have great virtues
and effects in accelerating or retarding delivery; so
that, if tied to the arm of a woman with child, it
prevents abortion; and if to the leg, it promotes de-
livery. It is pretended, that the eagles seek for
these stones to lay in their nests, and that they can-
not hatch their young without. On such tale and
imaginary virtues was raised all the credit which
this famous fossil possessed for many ages.—*Sir J.
Hill, History of the Materia Medica.*

Eaglet. *s.* Young eagle.

This treason of his sons did the king express in an
emblem, wherein was an eagle with three eaglets
tying on her breast, and the fourth pecking at one
of her eyes. *Sir J. Davies.*

Eaglewood. *s.* [Lat. *agallochum*.] See ex-
tract.

Alcoyrium Agallochum produces one of the two
sorts of Calamine, Eaglewood, or Lign-aloes, a tra-
nsparent substance which Laureus states . . . consists
of a concretion of the oily particles into a resin in
the centre of the trunk; it is brought on by some
disease, and in time the tree dies of it. Of all per-
fumes it is the most precious to the oriental nations.
Its scent is used against vertigo and paralysis.—

And, in the doing of the deed of kind,

Ear. *s.* [from A.S. *ear*.]

1. Organ of hearing.

His ears are open unto their cry.—*Isaiah, xxxiv.*

2. Delicacy of sense in music; power of
judging of harmony; musical ear, good
ear for music, or simply good ear.

She has a delicate ear, and her voice is music.—
Richardson.

The faculty by which the relations of sounds are
apprehended is a musical ear in the largest accepta-
tion of the term. In this signification the faculty is
nearly universal among men; for all persons have
musical ears sufficiently delicate to understand and
to imitate the modulations corresponding to various
emotions in speaking; which modulations depend
upon the succession of acuter and graver tones.
These are the relations now spoken of, and these are
plainly perceived by persons who have very im-
perfect musical ears, according to the common use of
the phrase.—*Whitall, Vocal Organism reconstituted.*

3. Prominence raised on a larger body for the
sake of holding it.

There are some vessels, which, if you offer to lift
by the belly or bottom, you cannot stir them; but
are soon removed, if you take them by the ears.
Jeremy Taylor, Rule and Exercise of Holy Living.

4. Disposition to like or dislike what is heard;
judgement; opinion; taste.

He held his sense closer, and in fewer words,

J. Denham.*

5. Head, or person; (generally suggesting the
notion of something falling from above).
Colloquial.

Their warlike force was soon weakened, the city

Better pass over an affront from one scoundrel,
than draw the whole herd about a man's ears.—*Sir
R. L. Estrange.*

Be not alarmed, as if all religion was falling about

6. Privilege of being readily and kindly heard;
favour; (with *give*, *give*, &c.).

They being told there was small hope of ease,
Were willing at the first to give an ear

and W.)*

He conceived that the earable lands were left

Earache. *s.* See extract.

Earache is most frequently symptomatic of in-
flammation of the ear, or of the presence of foreign
bodies, or of insects in the meatus, or of some affec-
tion within the head, or in the vicinity of the ear;
and is occasionally consequent upon small-pox,
scarlet fever, and erysipelas of the adjoining parts.
More rarely it is idiopathic, or a purely nervous
affection. The pain in this form is often very severe;
does not gradually increase in severity, but is sud-
den, and occurs in paroxysms; it is neither attend-
ed with throbbing, nor fever, and is more or less ir-
regular or intermittent. . . . The causes of earache are
those of all other nervous affections. It is more
common in females, in whom it is often connected
with uterine derangement or with pregnancy. It is
also often symptomatic of disorders of the prima
via; or is associated with rheumatism and neuralgia;
and is very commonly caused by currents of cold
air, and the irritation of earwax or otherwise dis-
eased teeth or gums.—*Coptland, Dictionary of Prac-
tical Medicine.*

Earal. *adj.* Relating to, or constituted by,
the ear; aural, auricular. *Barbarous.*

They are not true penitents that are merely earal,
verbal, or worded men, that speak more than they
really intend. *West, Sermons, p. 51; 1628.*

Eardrum. *s.* Membrane so called, stretched
across the ear like the parchment of a drum
so as to receive the vibrations of the air
when thrown into the state that produces
sound; drum of the ear; in more technical
language, Tympanum.

Valvula discovered some passages in the rami of
the ear-drum; of mighty use, among others, to
make discharges of torules.—*Ischam, Physico-
Theology.*

The tympanic adjunct to the organ of hearing
makes its first appearance, simultaneously with the
development of eyelids and lacrymal organs, in the
batrachia, which have quitted their aquatic for an
aerial existence. Beyond the vestibular foramen is
continued a short but wide passage outward, or

'mentus,' closed from the external air by a thin transparent vibratile membrane—the 'tympanum' or *ear-drum*. From the rigidly plate closing the vestibular foramen a slender bony style is continued across the 'tympanic cavity' to a drum, to which it is attached by a capillary or spatulate cartilage, in which a small muscle is inserted. A wide vertical passage from the tympanic cavity to the sinuses preserves the equilibrium between the air in that cavity and the atmosphere outside: it is called 'eustachian tube.' This tube will be found to bear relation to the size and exposed condition of the *ear-drum*, and perhaps, also, to its form, which, in the frog and other air-breathing ovipara, is convex externally. . . . The *ear-drum* . . . is less conspicuous externally in all lands than in those of a small muscle acts on the cartilage connected with the *ear-drum*, and a second longer muscle is attached to the dorsal piece closing the vestibular orifice. . . . All serpents have the internal organ of hearing, similar in the main to the above: the base of the stapes closing the foramen vestibuli, is connected, in most reptiles, by a long slender bony style, through the medium of cartilage and ligamentous fibres to the skin, which shows no sign of *ear-drum* or external mentus. No air is admitted by an eustachian canal to the cellular substance traversed by the tympanic ossicle; and of this there is no trace in Tytlops and Rhinophis. In lacertians, the modification of part of the integument for the special reception of sonorous vibrations is resumed. In the lacertans, the *ear-drum* is partially protected by its oblique position and by a ridge or fold of the skin at the back part of its circumference. . . . In the chelonians the *ear-drum* is again masked by unmodified integument; in the turtle it is covered by the second scale counting upward from the articulation of the lower jaw. The membranous tympani in, however, distinctly formed, thicker and more opaque than in batrachia or lacertians, and convex outwardly. —Owen, *Anatomy of Vertebrates*.

Earing. verbal *abs.* Ploughing.

Earing. verbal *abs.* Coming into ear as corn.

Earl. s. [A.S. *eorl*.] Title of nobility: (in England denoting a rank between that of *marquis* and *viscount*).

Thanes and kinsmen,
Henceforth be earls, the first that ever Scotland
For such an honour nam'd.

Shakespeare, Macbeth, v. 7.
Next to these spiritual lords are the earls and barons, or lay peers of England. The former dignity was perhaps not so merely official as in the Saxon times, although the *earl* was entitled to the third penny of all emoluments arising from the administration of justice in the county-courts, and might, perhaps, command the militia of his county, if it was called forth. Every *earl* was also a baron, and held an honour or barony of the crown, for which he paid a higher relief than an ordinary baron, probably on account of the profits of his earldom. I will not pretend to say whether titular earldoms, absolutely distinct from the lieutenancy of a county, were as ancient as the conquest, which Madox seems to think, or were considered as irregular so late as Henry II., according to Lord Lyttelton. In DuRoi's Baronage, I find none of this description in the first Norman reigns, for even that of Clare was connected with the local earldom of Hertford.—Hallam, *View of the State of Europe during the middle Ages*, ch. viii. pt. 3.
The word *earl* (*eorl*) meant originally a man of noble birth, as opposed to the *ceorl*. It was not a title of office till the eleventh century, when it was used as synonymous to *alderman*, for a governor of a county or province. After the conquest, it superadded altogether the ancient title.—*Ibid.* ch. viii. pt. 3, note.

Earl-marshal. s. One who has chief care of military solemnities.
The marching troops through Athens take their way;
The great *earl-marshal* orders their array. *Dryden*.

The duke of Clarence having married the heir of the earl of Ulster, and by her having all the earldoms of Ulster, carefully went about the redressing evils.—*Spenser, View of the State of Ireland*.

Another director of the Whig party was Charles Montagu. He was often when he had risen in power, honours, and riches, called an upstart by those who envied his success. That they should have called him so may seem strange; for few of the statesmen of his time could show such a pedigree as his. He sprang from a family as old as the Conquest: he was in the succession to an *earldom*; and he was, by the paternal side, cousin of three earls. But he was the younger son of a younger brother.—*Mac. lay, History of England*, ch. xx.

b. In the newer sense.
Modern science has demonstrated that the substances called primitive earths, and which, prior to the great electro-chemical career of Sir H. Davy, were deemed to be elementary matter, are all compounds of certain metallic bases and oxygen, with the exception of silica, whose base, silicon being analogous to boron, has led that compound to be regarded as an acid; a title characteristic of the part it extensively performs in neutralizing alkaline bodies, in mineral nature, and in the processes of art. Four of the earths, when pure, possess divided alkaline properties, being more or less soluble in water, having (at least three of them) an acrid alkaline taste, changing the purple infusion of red cabbage to green, most readily saturating the acids, and affording thereby neutral-saline crystals. These four are barytes, strontia, lime (calcia), and magnesia. The earths proper are five in number; alumina, glucina, yttria, silicic acid, and thorina. These do not change the colour of infusion of cabbage or tincture of litmus, do not readily neutralize acidity, and are quite insoluble in water. The alkalies are soluble in water even when carbonated; a property which distinguishes them from the alkaline earths.—*Ure, Dictionary of Arts, Manufactures, and Mines.*
6. In Hunting. Foxhole: (hence, 'run to earth': 'earth-stopper').
Hamilton fix'd five o'clock in the morning of the thirteenth of February for the deed. Earthnut. s. See extracts, in the first of which it is the English umbelliferous plant *Bunium flexuosum*; in the second, the African *Arachis hypogæa*.
Where there are *earthnuts* in several patches, though the roots lie deep in the ground, and the stalks be dead, the vines will by their scent root only where they grow.—*Ray.*
The *earthnut*, . . . a singular plant, has frequently been confounded with others. . . Its common appellation, the *earthnut*, has led to the conclusion that it was a species of *nut*, such as is known in England under the name of *sigillat nut*, and *groundnut*. This, as well as the *earth chestnut*, belong to totally different genera. On the continent, and in the East Indies, a similar confusion had been existed by the appellation of the ground pistachio, which raised the fruit to be confounded with the nut of the tree *Pistacia vera*. Some resemblance, on the other hand, existing between these—as well as from their being eaten by different nations . . . and also for producing oil—rendered the true description still more difficult. Botanists, however, are now no longer at a loss. The *Arachis* nut partakes of the nature of the pea or bean of our own country . . . originally from Africa. It has been naturalized in Europe, and, with the climate of the south of France, may be turned to good account. *Stamonds, Commercial Products of the Vegetable Kingdom.*

Earthquake. s. Tremor or convulsion of the earth.
This subterranean heat or fire being in any part of the earth stop'd, by some accidental rent or obstruction in the passages through which it used to ascend, and being preternaturally accumulated in greater quantity into one place, causes a great refraction and intumescence of the water of the abyss, putting it into very great commotions; and making the like effort upon the earth, expanded upon the face of the abyss, occasions that agitation and concussion which we call an *earthquake*.—*Woodward, Essay towards a Natural History of the Earth.*
The country, by reason of its vast caverns and subterraneous fires, has been universally torn by *earthquakes*, so that the whole face of it is quite changed.—*Adrian, Travels in Italy.*

Earthwork. s. In Fortification. Outposts made of earth: (opposed to stone).
The white tower . . . is blocked up with a double line of *earthworks* pierced for guns.—*W. H. Russell, The Crimea War, ch. xxxii.*

The consequent of which words is plainly this,
that there is an *éating* of Christ's flesh or drinking

subordination to Christ; the sacramental external
éating alone being no *éating* of Christ's flesh, but
the symbols and sacraments of it.—*Jeremy Taylor,
Real Presence of Christ in the Sacrament*, § 3.

The *Éater*, in the 'Arabian Nights,' who

the combination *ea* was sounded *ya*. Com-
pare also *eum* and *eme*.

sider the boundless ocean of Gossyp (Imperfect, un-
distilled Biography) which is emitted and imbibed
by the human species daily:—if every secret-his-
tory, every closed-mouth conversation, how trivial
matter, has an interest for us, then might the con-
versation of a Schiller with a Goethe, so rarely do
Schillers meet with Goethes among us, tempt Ho-
mesty itself into *éavedropping*. *Carlyle, Miscella-
neous, Schiller*.

What are you staying for here, Miss Wyndham?

Ebony. *s.* Valuable cabinet wood so called;
tree (of the genus *Diospyros*) from which
it is procured.

Ebony is the most important of the trees which
they are in the habit of felling, as well as the one
involving the greatest amount of labour, from the
hardness and weight of the timber, which is so dense
and heavy, that, to permit of their moving it at all,
they are obliged to cut it into very short logs. The
densely black portion, which is an article of com-
merce, occupies the centre of the tree; and in order
to reach it, the whittor wood that surrounds it is
carefully cut away. The Arabs were so well aware
of this peculiarity in *ebony* that Albirouni, in his
treatise on India, calls it the 'black marrow of a
tree, directed of its outer integuments.'—*Sir J. E.*
Tennent, Ceylon, pt. ix. ch. v.

Ebriety. *s.* [Lat. *ebrietas*; from *ebrius* =
drunken.] Drunkenness.

Bitter almonds, as an antidote against *ebriety*, hath
commonly failed.—*Sir T. Browne, Vulgar Errors*.
Avarice, a man of his own faith, restrained his
ebriety to hilarity.—*Whitlock, Observations on the*
present Manners of the English, p. 305. 1051.

When Noah planted the vine, Satan attended, and
sacrificed a sheep, a lion, an ape, and a saw. These
animals were to symbolize the gradations of *ebriety*.
—*T. Watson, History of English Poetry*, lib. lvi.
Discretion on the Great Komosomum.

Ebriosity. *s.* Tendency to, or habit of,
drunkenness.

That religion which excuseth Noah's surprisal,
will neither acquit *ebriosity* nor *ebriety* in their in-
tended perversion.—*Sir T. Browne*.

Ebulliate. *v. n.* Boil over. *Rare*.

Where this 20 play-offering argument will
ebulliate.—*Trypho, Histrionic-Master*, pt. i. act iv. s. 3.
(Rich.)

Ebullience, or Ebullieney. *s.* Act of boil-
ing; condition of that which boils.

My meaning is only this; to caution against that
vulgar and popular error of mistaking the natural
and enthusiastic fervor of men's spirits and the
ebullieney of their fancy.—*Cadworth, Sermons*,
p. 64.

Ebullient. *s.* [Lat. *ebulliens*, -entia, pres.
part. of *ebullio* = boil, boil over.] Boiling
over.

They scarce can swallow their *ebullient* spleen.

Young, *Night Thoughts*, l. vii.

I conceived and drew up the plan of a work, a
drama, which was to be, to my mind, what the
Faint was to Goethe's. My Faint was old Michael
Scott; a much better and more likely original than
Faust. He appeared in the midst of his college
of devoted disciples, enthusiastic, *ebullient*, shedding
around him bright surmises of discoveries fully
perfected in after-times, and incalculating the study
of nature and its secrets as the pathway to the ac-
quisition of power.—*Coleridge, Table Talk*.

Ebullition. *s.* Act of boiling up with heat.

The dissolution of gold and silver disagree; so
that in their mixture there is great *ebullition*, dark-
ness, and, in the end, a precipitation of a black
powder.—*Bacon*.

Iron, in aqua fortis, will fall into *ebullition* with
noise and emission; as also a crass and fuming ex-
halation, caused from the combat of the sulphur of
iron with the acid and nitrous spirits of aqua fortis.
—*Sir T. Browne, Vulgar Errors*.

When aqua fortis, or spirit of vitriol, poured upon
filings of iron, dissolves the filings with a great heat
and *ebullition*, is not the heat and *ebullition* effected
by a violent motion of the parts; and does not the
motion argue, that the acid parts of the liquor rush
towards the parts of the metal with violence, and
run forcibly into its pores, 'till they get between its
outmost particles and the main mass of the metal?
—*Sir J. Newton*.

A violent cold, as well as heat, may be produced
by this *ebullition*; for if acid ammoniac, or any pure
volatile alkali, dissolved in water, be mixed with an
acid, an *ebullition*, with a greater degree of cold, will
ensue.—*Arbuthnot, On the Nature and Choice of*
Aliments.

The remaining circumstances relied upon,—as his
[Lord Chatham's] squandering away the ample
legacy of Sir William Pymont, and his impetuous
proceedings in carrying on improvements at his
Kentish villa, with no regard to expense, and even
little attention to the period of the day or night
when he required the work to be done,—may all be
well accounted for by the known ardour of his dis-
position; and are truly to be reckoned among the
natural *ebullitions* of the same vehement dispo-
sition of purpose which, exerted upon greater things,
formed the leading feature of his commanding char-
acter.—*Lord Brougham, Historical Sketches of*
Sir John of the Reign of George III., Lord
Chas. Jm.

Ecarts. *s.* (pronounced as a word of three
syllables.) [Fr.] Game at cards so called.

All eyes were on a very pretty woman, with fifteen
thousand a-year, and only twenty-three. The duke
of Shropshire wished he was discommodated. Such
a player of *ecarts* might double her income.—
Diary of the younger, The young Duke, b. ii. ch. iv.

Eccentric. *adj.* [Gr. *ek* = out, *kentron* =
centre.]

1. Deviating from the centre; having a dif-
ferent centre from some other circle.

Whenever it is that planets move all one and the
same way in orbit concentric, while comets move
all manner of ways in orbit very *eccentric*?—*Sir I.*
Newton, Opticks.

In the history of astronomy, we find that the in-
equable motions of the sun, moon, and planets were,
in a great measure, reduced to rule and system by
the Greeks, by the aid of an hypothesis of circles,
revolving, and carrying in their motion other circles
which also revolved. This hypothesis introduced
many technical terms, as Deferent, Epicycle, *Eccen-*
tricity.—*Whewell, Novum Organum renovatum*,
p. 205.

2. Not terminating in the same point; not
directed by the same principle.

Whatever affairs pass such a man's hands, he
crowds them to his own ends; which must needs
be often *eccentric* to the ends of his master.—
Bacon, Essays.

3. Irregular; anomalous; deviating from
stated and constant methods.

A character of an *eccentric* virtue, is the more
exact image of human life, because it is not wholly
exempted from its frailties.—*Dryden*.

Then from whatever we can to sense produce,
Common and plain, or wondrous and abstruse,
From nature's constant or *eccentric* laws,
The thoughtful soul this general inference draws,
That an effect must presuppose a cause. *Prior*.

Eccentric. *s.*

1. That which deviates from a centre.

Astronomers, to solve the phenomena, framed to
the comet *eccentric* and epicycles and a wonder-
ful engine of orbs.—*Johnson*. (Rich.)

Thither her course he bends
Through the calm firmament; but up or down,
By centric or *eccentric*, hard to tell.

Milton, *Paradise Lost*, lib. 672.

They blith, unblith, contrive,
To save appearances: they pierce the sphere
With centric, and *eccentric*, scribbled over,
Cycle, and epicycle, orb in orb. *Ibid.* viii. 81.

2. Deviation.

Let the lot decide the main of the controversy,
and reserving somewhat for the publick, somewhat
for the strangers, somewhat for common calamities,
somewhat, as it were, for the universal motion of
the whole body, somewhat for *eccentricity*.—*Ham-*
mond, iv. 351. (Rich.)

Eccentricity. *s.*

1. Deviation from a centre; state of having
a different centre from another circle.

In regard of *eccentricity*, and the epicycle wherein
it moveth, the motion of the moon is unequal.—*Sir*
T. Browne.

By reason of the sun's *eccentricity* to the earth,
and obliquity to the equator, he appears to us to
move unequally.—*Haller*.

The *eccentricity* of the earth is the distance be-
tween the focus and the centre of the earth's elliptical
orbit.—*Harris*.

Excursive and irregular deviation from
usual custom.

The duke at his return from his *eccentricity*, for
so I account favourites abroad, met no good news.—
Sir M. Wotton.

3. Deviation from established methods; par-
ticularity; irregularity.

Akenside was a young man, warm with every no-
tion that by nature or accident had been connected
with the sound of liberty; and, by an *eccentricity*
which such dispositions do not easily avoid, a lover
of contradiction, and no friend to any thing estab-
lished.—*Johnson, Life of Akenside*.

Echymosis. *s.* [Gr. *ekchymos*.] Livid
spots or blotches in the skin, made by
extravagated blood; bruise with suffusion
of blood; black eye; medical term, have
ing *Echymotic* and other derivatives.

Echymosis may be defined an extravasation of
the blood in or under the skin, the skin remaining
whole.—*Wiseman, Surgery*.

Ecclesiast. *adj.* Ecclesiastic. *Rare*.

Thus we see that all our *ecclesiast* and political
choices may consent and work as well together with-
out any rupture of the state as the Christians and
freedomholders.—*Milton, Of Reformation in England*,
b. xl. (Rich.)

Ecclesiastes. *s.* [Gr.] One of the ca-
nonical books of Holy Scripture.

The book is in the Hebrew denominated *Colic-*
eth, a word which signifies one who speaks in pub-
lic; and which, indeed, is properly translated by
the Greek word *Ecclesiastes*, or, the Preacher. . .
The Hebrew word has, however, a feminine termi-
nation in respect to wisdom, personified, as it were,
in Solomon.—*Dr. Gray, Key to the Old Testament*.

Ecclesiastic. *adj.* [Lat. *ecclesiasticus*.]

Relating to the church.

A church of England man has a true veneration
for the scheme established among us of *ecclesiastick*
government.—*Swift*.

Ecclesiastic. *s.* Person dedicated to the
ministries of religion.

The ambition of the *ecclesiasticks* destroyed the
purity of the church.—*T. Burnet, Theory of the*
Church.

Ecclesiastical. *adj.* Same as Ecclesiastic.

In discipline an *ecclesiastical* matter or civil? If
an *ecclesiastical*, it must belong to the duty of the
minister.—*Hooker, Ecclesiastical Polity*.

Clergymen, otherwise little fond of obscure terms,
yet in their sermons are liberal of those which they
find in *ecclesiastical* writers.—*Swift*.

Ecclesiasticism. *s.* Church principles.

My religious convictions and views have remained
from any tincture of *ecclesiasticism*.—*Writ-*
ings of Rev. John, January, 1860, p. 24.

Ecclesiastical. *s.* [Latin, from Greek.]
One of the books which form the Apo-
crypha. See extract.

The book of *Ecclesiastical*, according to some
writers, is so called, because the ancients divided
the books of the Old Testament into four
sorts; the first contained the Pentateuch, the sec-
ond, the Prophets; the third, the Hagiographa;
the fourth, the *ecclesiastical* or apocryphal books,
as not being in the Jewish canon. Among the *ec-*
clesiastical books, this of Jesus the son of Sirach
being most remarkable and useful, it was ear-
ly called *Ecclesiastical*, whilst the rest of the same
class have lost their name. According to others,
this title was given by the Latins to it, to denote
its use in the church, being read for the sake of edifi-
cation in the public religious assemblies. Or,
lastly, because, like Solomon's *Ecclesiastes*, which it
resembles in name as well as matter, it teaches and
instructs such as attend to it by the admirable pro-
cepts which it delivers.—*Arndt, Compendium of*
Ecclesiastical, pref.

Ecclesiologist. *s.* [Gr. *λογος* = word, prin-
ciple.] This word, suggesting as its con-
geners *Ecclesiology* and *Ecclesiological*, is
the title of a periodical upon church archi-
tecture, published in 1850, when it was con-
sidered to be a new word. Earlier exam-
ples, however, are probably to be found, as
well as the use of *Ecclesiology* in a more
general sense, viz. the doctrine, system,
or philosophy of the government and au-
thority of churches.

Eccoprotic. *adj.* (sometimes used as a sub-
stantive.) [Gr. *ek*, and *protrikos*.] Act-
ing as a medicine which purges so as to
bring away no more than the natural ex-
crements lodged in the intestines. *Obsolete*.

The body ought to be maintained in its daily ex-
cretions by such means as are *eccoprotic*.—*Harey*,
On the Mague.

Echidna. *s.* [Gr. *ἐχίνα* = viper.] Mono-
trematous animal so called. See extract.

The third principal division of the *Echidnata* con-
tains but two genera, belonging to the Australian
range, and which have long excited the attention of
zoologists: these are *Echidna* and *Ornithorhynchus*:
the first resembling a hedgehog, with the muzzle of
an ant-eater, without the slightest vestige of a tooth;
and the latter a mole, with the bill of a duck. . .
The *Echidna*, or spiny ant-eater, are of two species.
Their mouth, or muzzle, more remarkable than that of a
bird than of a quadruped, unless, indeed, it be com-
pared to that of the American ant-eater; its form is
narrow and lengthened, terminating in a very small
mouth, hardly more than sufficient to admit the pas-
sage of a slender extensible tongue, which the animal
uses, like the ant-eaters of America and India, to
draw into its mouth the ants upon which it feeds.
Although this mouth is destitute of teeth, the palate
is furnished with several rows of small spines, di-
rected backwards. Their feet are short, and are
each furnished with five very strong and lengthened
toes, admirably adapted for digging. The whole of
the body is covered with short, acute, and rather
strong spines, somewhat similar to those of the
hedgehog; but in one species these spines are inter-
mixed with a quantity of thick and soft fur, more
resembling that of the Brazilian porcupine.—

Scapulae, Natural History and Classification of Quadrupeds, §§ 230, 231.

Echinated, also **Echinate**. *adj.* In Zoology and Botany. Bristled like a hedgehog; set with prickles.

An echinated pyrites in shape approaches the echinated crystalline balls.—*Woodward, On Fossils*.

Echinoderm. *s.* [Gr. *ἐχίνος*, *ἐπίμαρς* = skin.] Animal of the order Radiata, chiefly represented by the sea-urchins so called.

(For examples see extract under Echinodermata.)

Echinodermal. *adj.* Relating to the Echinodermata.

(For example see extract under Echinodermata.)

Echinodermata. *s.* Class in Zoology so called, of which the sea-urchins are the typical representatives.

The soft and gelatinous radiaries have often baffled the anatomist by their seeming simplicity and uniformity of their texture; the harder, spine-clad, or echinodermat species, perplex the most patient and persevering disector by the extreme complexity and diversity of their constituent parts. This class of animals... includes species in which the form is most strictly or typically radiate. With a radiated filamentary system of nerves is combined not only a distinct abdominal cavity with an alimentary canal suspended therein by a vascular mesentery, and having a distinct anal outlet, but there are distinct vascular and chylous systems together with a large and well-defined respiratory organ. This organ, however, may be regarded as the exceptional condition of the radiated type of structure, and is found only in the highest and aberrant forms of the present class, which indicate the transition from the echinodermata to the annelids. In the next order the angles disappear, and the disc expands until a spheroid or globular form is obtained, which characterizes the echinodermata commonly called 'sea-urchins,' and Echinoid by the Greeks. These vermiform echinodermata (holothurioides) seem to lead, by the concluding order Sipunculoides, to the true worms, which stand on the lowest step of the articulated division of the animal kingdom. The name echinodermata has been applied to these diversified forms of the higher organized zoology of Cuvier, because in many of the species the integument is defended by spines; they, however, possess, and are associated together by another and more general tegumentary character; the skin is perforated in most of the species by minute foramina, through which a multitude of small tubes or hollow setaceous (tube-like) feet can be protruded and retracted, and these constitute the common organs of adhesion and locomotion in the echinodermata.—*Owen, Lectures on Comparative Anatomy*, lect. 2.

Echinus. *s.*
1. Radiated animal so called; sea-urchin; sea-hedgehog.

The calcareous pieces entering into the composition of the complex skeleton of the echinus are those of the shell, of the unceasing apparatus called the 'lantern,' of the ambulacral tubes, and of the pedicellaries. All the echinidae are admirable for the regular and beautiful pattern in which, as in a tessellated pavement, the numerous calcareous pieces composing their globular crust are arranged; many of the species are formidable from the size and form of the spines with which the shell is beset. The component plates of the shell are divided into several series, called oral, anal, genital, ocular, ambulacral, and interambulacral plates. The proper shell is built up of the two latter kinds, which constitute a hollow spheroid, having a large aperture at each pole, where the first four kinds of plates are situated. The ambulacral plates are perforated for the passage of the tubular feet, the parallel rows of which intersect and overshadow spaces compared by Linnaeus to avenues or ambulacra; these plates likewise support spines. The interambulacral plates, which support a greater number of the spines, are characterized by more numerous tubercles, and are not perforated. Both kinds of plates are of a pentagonal form, and are arranged each kind in five alternate pairs of vertical rows. The plates of each pair are united together by a sinuous suture, and increase in size as they approach the equator of their living globe. These twenty series of ambulacral and interambulacral plates constitute the chief part of the spheroidal skeleton of the echinus.—*Owen, Lectures on Comparative Anatomy*, lect. 2.

2. In Architecture. Member or ornament taking its name from the roughness of the carving, resembling the prickly rind of a chestnut, and not unlike the thorny coat of a hedgehog.

The echinus is used by modern architects in corners of the Ionic, Corinthian, and Composite orders; and generally set next to the abacus, being carved with anchors, darts, and ovals, or eggs.—*Harrie*.

Echo. *s.* [Gr. *ἠχώ*; Lat. *echo*.—Echo was supposed to have been once a nymph, who pined into a sound for love of Narcissus.] Return, or repercussion, of any sound; sound returned.

The pleasant myrtle may teach the unfortunate echo in these woods to recount the renowned name of a goddess.—*Sir P. Sidney*.

The sound, filling great spaces in arched lines, cannot be guided; therefore there hath not been any means to make artificial echoes.—*Bacon, Natural and Experimental History*.

Babbling echo mocks the hounds, Replying shrilly to the well-tuned horns, As if a double hunt were heard at once.

Shakespeare, Titus Andronicus, ii. 3.

Thy hounds shall make the welkin answer them, And fetch shrill echoes from their hollow earth.

Id., Taming of the Shrew, Induct. sc. 2.

To you I mourn, not to the deaf I sing; The woods shall answer, and the echo ring.

Echo. *v. a.* Resound; give the repercussion of a voice.

As the paring

All the church echo'd.

Shakespeare, Taming of the Shrew, iii. 2.

Echo. *v. a.* Send back a voice; return what has been uttered.

Our separatists do but echo the same note.—*Dr. II. More, Decay of Christian Piety*.

With peals of shouts the Tyrians praise the song; Those peals are echo'd by the Trojan throng.

Dryden, Translation of the Æneid.

Echoed. *part. adj.* Returned as an echo.

One great death deforms the dreary ground; The echo'd woe from distant rocks resound.

Echoer. *s.* One who echoes.

Those servile echoers of aught but truth.

Machin, Pursuits of Literature.

Echoing. *part. adj.* Sounding as an echo.

Through rocks and caves the name of Della sounds;

Della each cave and echoing rock rebounds.

Pope.

The cock's shrill clarion, or the echoing horn, No more shall rouse them from their lowly bed.

Gray, Elegy.

Eclaircissement. *s.* [Fr.] Explanation.

Well, then, by the world, a man can't speak civility to a woman now, but presently she says, he makes love to her. Nay, madam, you shall stay, with your pardon, since you have not yet understood him, till he has made an *éclaircissement* of his love to you.—*Wycherley, The Country Wife*.

Eclat. *s.* [Fr.] Splendour; show; lustre.

Nothing more contributes to the variety, surges, and eclat of Homer's battles, than that artificial manner of piling his heroes by each other.—*Pope, Essay on Homer*.

All people's eyes and inclinations began now to turn towards Cæsar, who, by the eclat of his victories, seemed to rival the fame of Pompey himself.

Middleton, Life of Cæsar. (Ord M.)

Eclat. *adj.* [Gr. *ἐκλεκτικός* = selecting, showing selection, or resulting from it; *ἐκ* = out, *λέγω* = choose.—see *Elect*.] Selecting; choosing at will.

Cicero gives an account of the opinions of philosophers; but was of the eclectic sect, and chose out of each such positions as came nearest truth.—*Watts, Improvement of the Mind*.

(For further examples see under next entry.)

Eclat. *s.* Selector: (with its chief special applications to certain philosophers, who, without attaching themselves to any particular sect, took from any what they judged good; to a sect in the Christian church, called also modern Platonists, as considering the doctrine of Plato conformable to the spirit and genius of the Christian; to a sect of physicians among the ancients).

He [Pericles] sticks to his own philosophy; he shifts not sides like Horace, who is sometimes Epicurean, sometimes Stoic, sometimes Eclectic, as the present humour leads him.—*Dryden, Origin and Progress of Satire*.

But we need not struggle further, wringing a significance out of these mysterious words; in delineating the genuine transcendentalist, or 'philosopher of the third stage,' properly speaking the philosopher. Norval ascends into regions whither few readers would follow him. It may be observed here that British philosophy, tracing it from Duns Scotus to Dupond Stewart, has now gone through the first and second of these stages, the scholastic and the eclectic, and is in considerable honour. With our amiable Professor Stewart, than whom no man, not Cicero himself, was ever more entirely eclectic, that sect or eclectic class may be considered as having

terminated; and now philosophy is at a standstill, or, rather there is now no philosophy visible in these islands. It remains to be seen whether we also are to have our 'third stage,' and how that new and highest 'class' will denote itself here. The French philosophers seem busy studying Kant, and writing of him; but we imagine Norval would pronounce them still only in the eclectic stage. He says afterwards that all *eclectics* are essentially and at bottom sceptics, the more comprehensive, the more sceptical. *Carlyle, Critical and Miscellaneous Essays, Volatile*.

Eclat. *s.* Tendency to become eclectic.

But there is also an injurious mental habit, and a hazard of inferior evils, connected with that sort of eclecticism, which a system of indiscrimination aid to different religious communities presupposes. It seems to imply, and at least it prepares us to believe, that the power of revealed truth is in the abstract form of its propositions, just as when we have accurately stated a formula of mathematics, we know that we virtually possess all its results; and as, when we reduce it to a narrower expression, we are still aware what classes of results we exclude, and how much we retain.—*Gibson, The State in its Relations with the Church*, ch. ii.

Eclage. *s.* [Gr. *ἐκλεγμα*, from *λέγω* = lick.]

Form of medicine made by the incorporation of oils with syrups, and which is to be taken upon a liquorice stick. *Obsolete*.

Confection, trache, multibrid, *eclogia*, or thurea.—*Burton, Anatomy of Minicholp*.

Eclipse. *s.* [Gr. *ἐκλῆψις* = falling; from *λείπω* = leave, fail, fall short of.]

1. Obscuration of the luminaries of heaven: (as that of the sun by the intervention of the moon, or of the moon by the intervention of the earth).

Sips of yew,

Silver'd in the moon's eclipse.

Shakespeare, Macbeth, iv. 1.

Planets, planet-struck, real eclipses

They suffer'd.—*Milton, Paradise Lost*, x. 613.

So, though the sun victorious be,

And from a dark eclipse set free,

The influence, which we fondly fear,

Allies our thoughts the following year.

An eclipse of the moon is when the atmosphere of the earth, being between the sun and the moon, hinders the light of the sun from falling upon and being reflected by the moon: if the light of the sun is kept off from the whole body of the moon, it is a total eclipse; if from a part only, it is a partial one.

—*Locke*.

2. Darkness; obscuration.

All the posterity of our first parents suffered a perpetual eclipse of spiritual life.—*Sir W. Raleigh, History of the World*.

Eclipse. *v. a.*

1. Darken a luminary.

Now if the earth were flat, the darken'd moon

Would seem to all eclips'd as well as one.

Creech, Manilius.

2. Extinguish; put out.

Then here I take my leave of thee, fair son,

Born to eclipse thy life this afternoon.

Shakespeare, Henry VI. Part I. iv. 5.

3. Cloud; obscure.

They had seen tokens of more than common greatness, howsoever now eclips'd with fortune.—*Sir P. Sidney*.

Let other munes write his prosperous fate,

Of conquer'd nations tell, and kings restored;

But mine shall sing of his eclips'd estate,

Which, like the sun's, more wonders does afford.

Dryden.

He descended from his father, and eclipsed the glory of his divine majesty with a veil of flesh.

Calamy, Sermons.

4. Disgrace.

Now add the king, that her husband was eclipsed in Ireland by the no-countenance his majesty had showed towards him.—*Lord Clarendon, History of the Grand Rebellion*.

Another now hath to himself engross'd

All power, and us eclips'd.

Milton, Paradise Lost, v. 775.

Eclipse. *v. a.* ? Become dim (as the night does after looking at the sun). *Rare*.

Starry eyes, whereto my sight

Did eclipse with much delight,

Eyes that lighten, and do shine,

Beams of love that are divine.

R. Greene, Poems.

Eclipse. *s.* See extracts.

All stars, that have their distance from the ecliptic northwards not more than twenty-three degrees

and a half, run, in progression of time, have diurnal motion outward, and move beyond the equator.—*Sir P. Bruns, Vulgar Errors*, iv. 13.

The torquesque globe had the same site and position, in respect of the sun, that it now hath; its axis was not parallel to that of the ecliptic, but in-

ellined in like manner as it is at present.—Woodward, *Essay towards a Natural History of the Earth*.
You must receive an imaginary plane, which passing through the center of the sun, and the earth, extends itself on all sides as far as the firmament: this plane is called the *celiptick*, and in this the center of the earth is perpetually carried, without any deviation.—*Deutler, Sermon*.

A great circle of the sphere, supposed to be drawn through the middle of the zodiac, and making an angle with the equinoctial, in the points of Aries and Libra, of 23° 30', which is the sun's greatest declination. This is by some called *via solis*, or the way of the sun, because the sun, in his annual motion, never deviates from this line. It is this line which is drawn on the globe, and not the zodiac. But in the new astronomy the *celiptick* is that path among the fixed stars, which the earth appears to describe to an eye placed in the sun, as in its annual motion it runs round the sun from west to east. If you suppose this circle to be divided into twelve equal parts, they will be the twelve signs, each of which is denoted or distinguished by some asterism or constellation.—*Harris*.

Used adjectively.

The earth's rotation makes the night and day;
The sun revolving through the *celiptick* way,
Effects the various seasons of the year.

Sir R. Blackmore, Creation.

Eclogue. *s.* [Lat. *ecloga*, title equivalent to Bucolic or Pastoral in Virgil; a word of doubtful origin, and, as being a term applied to certain poems rather than to a general class, a proper rather than a common name.] Bucolic poem; bucolic; idyl; pastoral poem; pastoral.

What exclamation praises Basil
For his eclogue, that shows how better than
Spectacles to make every thing seem great.—*Sir P. Sidney*.

It is not sufficient that the sentences be brief, the whole *eclogue* should be so too.—*Pope*.

Economic. *adj.* Pertaining to the regulation of a household.

Her quickening power in every living part,
Both as a nurse, or as a midwife serve;
And doth employ her economic art,
And tuncy care, her household to preserve.
Sir J. Daines, On the Immortality of the Soul.

Economical. *adj.*

1. Same as Economic. *Rare*.

In economical affairs, having proposed the government of a family, we consider the proper means to effect it. *Watts*.

2. Frugal: (this being the *commoner* meaning, indeed the only one in which the word is, at present, in ordinary use. In few words is the difference between the form in *-ie* and the form in *-ical* more clearly marked than in this. *Economic*—frugal, is nearly as rare as *Economical*—pertaining to the regulation of a household; *Political* and *Political* give a like amount of difference).

Some are so plainly *economical*, as even to desire that the seat be well watered, and well fuelled.—*Sir H. Wotton, Elements of Architecture*.

3. Regulative.

Part of the power given unto Christ as man being merely *economical*, shewing at a certain end, shall then cease and terminate when that end for which 'twas given shall be accomplished.—*Greg, Cosmogony Sacred*, 122. (Ord MS.)

Economics. *s.* Doctrine of economy. See *Chromatics*.

A prince leaving his business wholly to his ministers, is as dangerous an error in politics, as a master's committing all to his servants is in *economics*.—*Sir R. L'Estrange*.

Economist. *s.* Manager, generally of a saving character.

After which, by the addition of a few years, and a superior understanding, she became, and continued all her life, a most prudent *economist*.—*Swift, Character of Stella*. (Ord MS.)

Very few people are good *economists* of their fortune, and still fewer of their time; and yet, of the two, the latter is the most precious.—*Lord Chesterfield, Letters*, let. 216. (Ord MS.)

The *ecologist* brought and sold, squandered and increased, without minding the economist or considering the spendthrift.—*Johnson*.

Economization. *s.* Result of the practice of economy.

Though the loss of heat does not therefore increase only as the square of the dimensions, it certainly increases at a smaller rate than the cubes. And to the extent that augmentation of mass results in a

greater retention of heat, it effects an *economization* of force. This advantage is not, however, so important as at first appears.—*Herbert Spencer, Inductions of Biology*.

Economize. *v. n.* Act, live, or manage with economy.

It was too late to *economize*, even if the necessity of doing so had become evident.—*Emilia Wyndham*.

Economize. *v. a.* Save; husband; make the most of.

In order to *economize* time and facilitate labour, care is taken to associate on one side of the motive machine the hammer, the shears, and the reducing cylinders; and on the other side to place the several systems of cylinders for drawing out the iron into bars.—*Encyclopædia of Arts, Manufactures, and Mines, Iron*.

Economy. *s.* [Gr. *oikonomia*, from *oikos* = house, family, &c., and *nomos* = law, distribution, regulation. The use of the *e* instead of *o*, which in the present spelling of this word is nearly universal, is no innovation, but an orthography recognized by Johnson himself, who writes: "This word is written from its derivation *economy*, but *o* being no dipthong in English, it is placed here" (i.e. under E) "with the authorities for different orthography."] 1. Management of a family; government of a household.

By St. Paul's *economy* the heir differs nothing from a servant, while he is in his minority; so a servant should differ nothing from a child in the substantial part.—*Jeremy Taylor, Rule and Exercise of Holy Living*.

2. Frugality; discretion of expense; laudable parsimony.

Particular sums are not laid out to the greatest advantage in his *economy*; but are sometimes suffered to run waste, while he is only careful of the main. *Dryden, State of Lancaster, Justice*.

I have no other notion of *economy*, than that it is the parent of liberty and ease.—*Swift, Letter to Lord Bolingbroke*.

3. Disposition of things; regulation.

All the divine and infinitely wise ways of *economy* that God could use towards a rational creature, oblige mankind to that course of living which is most serviceable to our nature.—*Hammoud*.

Applied to literary compositions.

In the Greek poets, as also in Plautus, we shall see the *economy* and disposition of poems better observed than in Terence.—*B. Jonson, Discourses*.

If this *economy* must be observed in the minutest parts of an epic poem, what soul, though sent into the world with great advantages of nature, cultivated with the liberal arts and sciences, can be sufficient to inform the body of so great a work?—*Dryden, Induction to Virgil's Æneid*.

4. System of notions; distribution of everything active or passive to its proper place; principle of regulation in any establishment or system, as in political and domestic economy.

These the strainers add,
That, by a constant separation made,
They may a due *economy* maintain,
Exclude the noxious parts, the good retain.
Sir R. Blackmore, Creation.

5. Principle.

But Eutyches did not merely insist upon a phrase; he appealed for his doctrine to the Fathers generally, and the holy Athanasius; he quoted Constantine, "that they said, 'Of two natures before the union,' but that 'after the union' they said 'but one.'"
It is also undeniable that, though the word 'nature' is applied to our Lord's manhood by St. Ambrose, St. Gregory Nazianzen, and others, yet on the whole it is for whatever reason avoided by the previous Fathers; certainly by St. Athanasius, who uses the words 'manhood,' 'flesh,' 'the man,' 'economy,' where a later writer would have used 'nature'; and the same is true of St. Hilary. In like manner, the Athanasian Creed, written, as it is supposed, some twenty years before the date of Eutyches, does not contain the word 'nature.' Much might be said on the plausibility of the defence, which Eutyches might have made for his doctrine from the history and documents of the Church before his time.—*Newman, Development of Christian Doctrine*, ch. v. sect. 2.

Ephrastic. *adj.* [Gr. *εφραστειν* = defensive; from *εφρασα* or *εφάρτω* = ward off.] In *Medicine*. Having the power to repel, or ward off. *Rare*, Prophylactic being the *commoner* word.

transpiration, by suitable purges and *ephrastic* medicines.—*Harsen*.

Ecstasis. *s.* [Latin from Greek.] Same as Ecstasy, only less English.

Let all this be a transportation and *ecstasis*.—*Gregory, Posthumus*. (Ord MS.)

Ecstasy. *s.* [Gr. *εκστασις*; from *εκ* = out, and *στασις* = standing, state, condition.]

1. Any passion by which the thoughts are absorbed, and in which the mind is for a time lost.

Follow them swiftly,
And hinder them from what this *ecstasy*
May now provoke them to.

Whether what we call *ecstasy* be not dreaming with our eyes open, I leave to be examined.—*Locke*.

2. Excessive joy; rapture.

O, love, be moderate! Alas, thy *ecstasy*!
Shakespeare, Merchant of Venice, iii. 2.
The religious pleasure of a well disposed mind moves gently, and therefore constantly; it does not affect by rapture and *ecstasy*; but it does the pleasure of health, still and sober.—*South, Sermons*.
Each delighted, and delighting, gives
The pleasing *ecstasy* which each receives. *Prior*.
A pleasure, which no language can express;
An *ecstasy*, that makes us only feel,
Plays round my heart. *Philips, Distress Mother*.

3. Enthusiasm; excessive elevation of the mind.

He lov'd me well, and oft would beg me sing:
Which when I did, he on the tender grass
Would sit, and harken even to *ecstasy*.
Milton, Comus, 623.

4. Excessive grief or anxiety.

Sighs and groans, and shrieks that rend the air,
Are idle, not mark'd; where violent sorrow seems
A modern *ecstasy*. *Shakespeare, Macbeth*, iv. 3.

5. In *Medicine*. Trance.

Catalepsy and *ecstasy*, although treated of by some writers as distinct affections, generally present very nearly the same pathological conditions, morbid relations, and complications, for which reasons I shall consider them . . . as varieties of the same species of disease.—*Copland, Dictionary of Practical Medicine, Catalepsy*.

One crops a Cærops in *ecstatic* dreams. *Pope*.

The complex ideas of substances are *ectypes*, copies, but not perfect ones; not adequate.—*Locke*.

Ecumenic. *adj.* [Gr. *οικουμενικος*, relating to the *oikoumenē*; this being the passive participle, in the feminine gender (the word *γῆ* = earth being understood), of *οικισ* = inhabit.] Respecting, relating to, or representing, the whole inhabited world; universal: (its chief special application being in *Theology*, to councils of a certain amount of generality).

Let . . . the suppression of heresy be the first paramount absorbing subject of debate. All precedent was in the Pope's favour; it had ever been the first act of *ecumenic* councils, from that of Nicea, to

guard the faith and to condemn heresy. So, too, the Council of Constance, commencing at this point, might be held a continuation, hardly more than a prorogation, of the Council of Pisa. And this to the Pope was life or death. For if the Council of Pisa was thus even tacitly recognized, his title among the three claimants to the Papacy, his absolute title, resting on the solemn decree of that council, was irrefragable.—*Milman, History of Latin Christianity*, b. xiii. ch. viii.

Ecumenical. *adj.* Same as Ecumenic.

Thus they were properly placed, as executive officers, under the control both of the legislature, on the part of the State; and of Scripture, of the ecclesiastical decrees, and of the national clergy, on the part of the Church; the clergy forming the ordinary tribunal to judge of heresy upon any questions which might arise within the kingdom; and the decrees of the councils being those common laws of Christendom, which it is the function of Catholic consent to recognize.—*Gladstone, The State in its Relations with the Church*, ch. vii.

Eutyches was supported by the Imperial Court, and by Dioscorus the Patriarch of Constantinople; the proceedings therefore at Constantinople were not allowed to settle the question. A general council was summoned for the ensuing summer at Ephesus, where the third ecumenical council had been held twenty years before against Nestorius. It was attended by sixty metropolitan bishops, ten from each of the great divisions of the East; the whole number of bishops assembled amounted to one hundred and thirty-five. Dioscorus was appointed President by the Emperor, and the object of the assembly was said to be the settlement of a question of faith which had arisen between Flavian and Eutyches.—*Newman, Development of Christian Doctrine*, ch. v. sect. 3.

Edacity. *s.* [Fr. *édacité*; Lat. *edacitas*, -*atis*, from *edo*=eat.] Tendency to eat largely; habit of eating largely; gluttony; voracity; ravenousness; greediness; rapacity.

In lopping and felling, save *edder* and stake, Thine hedges, as needeth, to mend or to make. *Tusser, Hundred Points of Good Husbandry*.

Eddish. *s.* See extract.

Commonly explained in the sense of aftermath, which gives too confined a signification. The meaning is pasture; or the estate growth of either grass or cornfield, and the word is probably a corruption of *edage*, as *rubbish* of *rubbage*.

Keep for stock is liberally plentiful, and the fine spring weather will soon create a good *eddish* in the pastures. (Times, April 20, 1837.)

That after the flax is pulled you get more feed that autumn than from the aftermath of seeds sown with wheat the second year; that the immense *edage* obtained from weeds the same year they are sown and after the flax is pulled, should be added to the value of the flax. (Economist, Feb. 1, 1852.)—*Wedgwood, Dictionary of English Etymology*.

Eddy. *s.* [see last extract.] Whirlpool; circular motion in water (or air).

My prides are as a bulrush upon a stream: if they sink not, 'tis because they are born up by the strength of the current, which supports their lightness; but they are carried round again, and return on the *eddy* where they first began. *Dryden*.

The wild waves madd'd him, and suck'd him in, And smiling addies dumbled on the main. *Id.*

So, where our wide Numidian wastes extend, Sudden th' impetuous hurricanes descend, Wheel through the air, in circling eddies play, Tear up the sands, and sweep whole plains away. *Adrian, Cato*.

Used either adjectively, or as the first element in a compound.

And chaff with eddy winds is whirl'd around, And dancing leaves are lifted from the ground. *Dryden*.

[*Eddy*.—Commonly referred to an Anglo-Saxon *ed-eden*, back-water (not preserved in the extant remains of the language), from *ed*, equivalent to the Latin *re* in composition, and *eden*, water. But this plausible derivation is opposed by numerous Norse forms given by *Asen*, *ida*, *ida*, *ida*, *edja*, *bik-ida*, *bik-vedu*, *bring-veda*, an eddy, back-water, which leave little doubt that the word is simply the Old Norse *eda*, a whirlpool, from *gida*, to boll, to rush; Anglo-Saxon *gith*, wave, flood, rush of water; *ythian*, to fluctuate, to overflow.—*Wedgwood, Dictionary of English Etymology*.]

Eddy. *v. n.* Whirl as an eddy.

No doubt preaching, in the proper sense of the word, is more effective than reading. . . . But . . . I prefer going to church to a pastor who reads his discourse: for I never yet heard more than one preacher without book, who did not forget his argument in three minutes' time; and fall into vague and unprofitable declamation, and, generally, very coarse declamation too. These preachers never progress; they eddy round and round. Sterility of mind follows their ministry.—*Coleridge, Table Talk*.

Edema. *s.* [Gr. *oîhma*=swelling.—scarcely naturalized; indeed, often combined as a generic term with another Latin word indicative of the specific character of the ailment to which it applies, e.g. *edema nodosum*. Few words beginning with *e* are so rarely spelt as here, i.e. with *e*. The derivatives, however, are truly Anglicized.] *In Medicine*. Swelling.

The jaws of birds are always *edentulous* and sheathed with horn, of diverse configurations, adapted to their different modes of life and kinds of food.—*Owen, Lectures on the Comparative Anatomy of Vertebrate Animals*, introd. lect.

Edit. v. a. [Lat. *edito* (*e* = out, and *do* = give) = give out.] Make an edition.

George Ellis, in his specimens of the early English poets, originally published in 1790, we believe, the first to introduce laymen to the general reader, by giving an extract of considerable length with explanatory annotations, from what he described as his 'very curious work'; which, he added, never had been, and probably never would be, printed. Subsequently another considerable specimen, in every way much more carefully and learnedly edited, and accompanied with a literal translation throughout into the modern idiom, was presented by Mr. Chenevix-Trenchard in his history of English poetry. But now the whole work has been edited by Sir Frederick Madden, for the Society of Antiquaries in London.—*Croik, History of English Literature, i. 179.*

Editing. verbal abs. Act of an editor; making of an edition.

All these works have been printed, used of them more than once; and a good many other pieces have also been attributed to Chaucer which are either known to be the composition of other poets, or of which at least there is no evidence or probability that he is the author. Only the Canterbury Tales, however, have as yet enjoyed the advantage of anything like care in editing.—*Croik, History of English Literature, i. 217.*

Editor. s. Result of editing, or the work of one who edits, generally applied to the republication (generally with some revision or correction) of some work.

These are of the second edition. *Shakespeare, Merry Wives of Windsor, ii. 1.*

The business of our redemption is to rub over the defaced copy of the creation, to imprint God's image upon the soul, and to set forth nature in a second and finer edition. *South, Sermons*.

In 1500 was printed at Paris the first edition of Erasmus's *Adages*, doubtless the chief prose work of this century beyond the limits of Italy; but this edition should, if possible, be preceded in order to judge with chronological exactness of the state of literature, for as his general knowledge of antiquity, and particularly of Greek, which was now very slender, increased, he made vast additions. The *Adages*, which were now about eight hundred, amounted in his last edition to 4151; not that he could find so many which properly deserved that name, but the number is made up by explanations of Latin and Greek idioms, or even of single words. He declares himself, as early as 1504, dissatisfied of the first edition of his *Adages*, which already seemed meagre and imperfect. *Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*.

Editorial. s. Editor; publisher. *Rare.*

They cannot be exact in any map whatever, as Mr. Norden himself, who laboured much in this matter, maketh his complaint in that necessary Guide, added to a little, but not much augmented, by the late editor.—*Gregory, Posthumus, p. 321: 1630.*

Editor. s. Giver out, especially as a publisher, critic, reviser, or one who prepares a work for publication.

Put case some well-minded printer (as one of the Stephens) is willing to be at an excessive charge, in the fair publication of a learned and useful work for the benefit of the present and following ages; it is most just that he should, from the hands of printers or states, receive a privilege for the sole impression; that he may recover, with advantage, the deep expense he hath been at; otherwise, some interloper may perhaps underhand fall upon the work at a lower rate, and undo the first editor.—*Bishop Hall, Cases of Conscience, p. 35: 1630.*

When a different reading gives us a different sense, or a new elegance in an author, the editor does very well in taking notice of it.—*Addison, Spectator*.

This nonsense got into all the editions by a mistake of the stage editors.—*Pope, Notes on Shakespeare*.

Editorial. adj. Relating to, connected with, or consisting in, the duties of an editor.

Laubin and Heyne seem to have considered it as part of their editorial duty not to leave the subject of orthography wholly unnoticed.—*Dr. Parr, British Critic, Feb. 1794.*

Now, in looking on the newspaper press as one of the principal guides of public opinion, and as an authoritative source of practical convictions to a large part of the community, the most prominent characteristic which strikes the observer is, that it is anonymous—that all the writers officially associated with a newspaper are unknown to the reader, and strictly maintain their incognito. This is exactly the general character of the newspaper press in all countries. The editorial articles are always anonymous in form, and generally anonymous in fact; though, in some cases, their authorship may be disclosed in private, or may be ascertained upon inquiry.—*Sir G. C. Lewis, On the Influence of Authority in matters of Opinion, ch. ii.*

Editorial. s. Office and duty of an editor.

Lord Lyttelton puts it into the mouth of Bolingbroke to observe to Pope, that a great part, so tied down to so tedious a translation as that of Homer, 'is a Columbus chained to an oar;' and that the editorship of Shakespeare, which Pope afterward undertook with more profit than reputation, was below him, and that his mind was unfit for the drudgery it requires. *Tyler, Historical Rhapody on Pope, p. 14.*

Edificate. v. n. Perform the office of the edificate, a kind of churchwarden or overseer; defend or govern the house or temple.

The devotion wherof could not but move the city . . . to edificate such a piece of divine edifice, where so many gods were present by their prayers, where not only the sports themselves, but all the company, were reputed holy for that time, and some accounted so ever after.—*Gregory, Notes on Scripture (Acts, xix. 35), p. 49: 1681.*

Edicable. adj. Capable of being educated; susceptible of education. *Rare.*

The functions which attain their highest development in the mammalian class are of far nobler character than those which are more immediately connected with the maintenance of animal life. The progressive expansion of the brain is greatest, and the dual predominance of reason over instinct is achieved, in the present class: sensation is its characteristic rather than muscular energy or irritability, the instincts become more varied, they are also less mechanical and more educable.—*Owen, Lectures on Comparative Anatomy, lect. i.*

Education. s. Bringing-up; training; formation of character: (generally in youth).

Education and instruction are the means, the one by use, the other by precept, to make our natural faculty of reason both the better, and the sooner to judge rightly between truth and error, good and evil. *Hooker, Ecclesiastical Polity*.

All nations have agreed in the necessity of a strict education, which consisted in the observance of moral duties.—*Swift*.

Educational. adj. Relating to, or consisting in, education.

Yet who that calmly, philosophically, it may almost be said religiously, surveys the power and strength of the Latin religion, . . . who then surveys it in its vast standing army of the clergy, and monks and friars, that had so long taken service in its defence, with its immense material strength of churches, monasteries, established laws, rank; in its letters, and in its arts; in its charitable, educational, institutions: who will not rather wonder at its dissolution, its abolition in so huge a part of Christendom, than at its duration?—*Milman, History of Latin Christianity, i. xiv. ch. i.*

Even a government cannot safely adopt any authority in ecclesiastical matters, or assume the exclusive truth of any one form of Christianity. It must look mainly to the numbers of such religious persuasion, in deciding the question of endowments for religious and educational purposes; and to the religion of parents in establishing the rules for determining the creed in which children, incapable of judging for themselves, are to be brought up.—*Sir G. C. Lewis, On the Influence of Authority in matters of Opinion*.

Educator. s. One who educates.

Could not the educators of the lowest be reminded under their laborious duty, without detracting from

This matter must have lain eternally confined to its beds of earth, were there not this agent to *educer* it thence.—*Hemward*.

The duty of the persecuted Church was clear: she must suffer patiently, and commit her cause to God. But, if God, whose providence perpetually *educer* good out of evil, should be pleased, as oftentimes He has been pleased, to redress her wrongs by the instrumentality of men, whose angry passions her lessons had not been able to tame, she might profitably accept from Him a deliverance which her principles did not permit her to achieve for herself. —*Murray, History of England*, ch. 12.

Edulcorate is a word introduced by the alchemists to signify the sweetening, or rather rendering insipid, of acrimonious pulverulent substances, by copious ablutions with water. It means, in modern language, the washing away of all particles soluble in water, by agitation or trituration with this fluid and subsequent decantation or filtration.—*Ure, Dictionary of Arts, Manufactures, and Mines*.

effect. *s.* [Lat. *effectum*, neuter of the pass. part. of *efficio*, from *facio*—make; also *effectus*, a substantive with the same meaning.]

1. Anything brought into existence, or determined, by something antecedent to itself, such antecedent being called the Cause, and the two words *cause* and *effect* being correlatives.

You may see by her example, in herself wise, and of others beloved, that neither folly is the cause of vehement love, nor reproach the *effect*. —*Sir P. Sidney*.

Effect is the substance produced, or simple idea introduced into any subject, by the exerting of power. —*Locke*.

We see the pernicious *effects* of luxury in the ancient Romans, who immediately found themselves poor as soon as this vice got footing among them.—*Addison, Travels in Italy*.

In order to express general and abstract truths concerning cause and effect, these terms, cause and effect, must be understood in a general and abstract manner. When one *event* gives rise to another, the first *event* is, in common language, often called the cause, and the second the *effect*. Thus the meeting of two billiard-balls may be said to be the cause of one of them turning aside out of the path in which it was moving. For our present purposes, however, we must not apply the term cause to such occurrences as this meeting and turning, but to a certain conception, force, abstracted from all such special *events*, and considered as a quality or property by which our body affects the motion of the other. And in like manner in other cases, cause is to be conceived as some abstract quality, power, or *efficiency*, by which change is produced: a quality not identical with the *events*, but disclosed by means of them. Not only is this abstract mode of conceiving force and cause useful in expressing the fundamental principles of science; but it supplies us with the only mode by which such principles can be stated in a general manner, and made to lead to substantial truth and real knowledge. Understanding cause, therefore, in this sense, we proceed to our axioms. . . . Nothing can take place without a cause. Every *event*, of whatever kind, must have a cause in the sense of the term which we have just indicated; and that it must, is a universal and necessary proposition to which we irresistibly assent as soon as it is understood. We believe each appearance to come into existence,—we conceive every change to take place,—not only with something preceding it, but something by which it is made to be what it is. An *effect* without a cause—an *event* without a preceding condition involving the *efficiency* by which the *event* is produced,—are suppositions which we cannot for a moment admit. That the connexion of *effect* with cause is universal and necessary, is a universal and constant conviction of mankind. It prevails in the minds of all men, undisturbed by all the assaults of sophistry and skepticism; and, as we have seen in the last chapter, remains unshaken, even when its foundations seem to be ruined. This axiom expresses, to a certain extent, our idea of cause; and when that idea is clearly apprehended, the axiom requires no proof, and indeed admits of none which makes it more evident. That, notwithstanding its simplicity, it is of use in our speculations, we shall hereafter see; but in the first place, we must consider the other axioms belonging to this subject. . . . *Effects* are proportional to their causes, and causes are measured by their *effects*. We have already said that cause is that quality or power, in the circumstances of each case, by which the *effect* is produced;

and this power, an abstract property of the condition of things to which it belongs, can in no way tall directly under the enumeration of the senses. . . . Causes may be greater or less; as, for instance, the force of a man is greater than the force of a child. But how much is the one greater than the other? How are we to compare the abstract conception, force, in such cases as these? To this, the obvious and only answer is, that we must compare causes by means of their *effects*;—that we must compare force by something which force can do. The child can lift one finger; the man can lift ten such fingers: we have here a means of comparison. . . . The cause determines the *effect*. The cause being the same, the *effect* must be the same. The connexion of the two is governed by a fixed and inviolable rule. It admits of no ambiguity. Every degree of intensity in the cause has some peculiar modification of the *effect* corresponding to it. Hence the *effect* is an infallible index of the amount of the cause; and if it be a measurable *effect*, gives a measure of the cause. We can have no other measure; but we need no other, for this is exact, sufficient, and complete. —*W. Wells, Axioms Optimum recedunt*.

Of the light or heat falling on any mass, a part, more or less considerable, is reflected; and only the remaining part works molecular changes in the mass. Next it is to be noted that the *effective* force is itself divisible into the temporarily *effective* and the permanently *effective*. . . Concerning these divisions and subdivisions of any force affecting an aggregate, the fact which chiefly concerns us to observe, is, that they are complementary to each other. Of the whole incident force, the *effective* must be that which remains after deducting the non-*effective*. The two parts of the *effective* force must vary inversely as each other: where much of it is temporarily *effective*, little of it can be permanently *effective*; and vice versa. Lastly, the permanently *effective* force, being expended in work both the innumerable re-arrangements which constitute chemical modification, and the sensible re-arrangements which result in structure, must generate of either kind an amount that is great or small in proportion as it has generated a small or great amount of the other.—*Herbert Spencer, First Principles*.

Effervescence. s.

In the physical sense, *effervescence* signifies an intestine motion, produced by mixing two bodies together that lay at rest before; attended sometimes with a hissing noise, frothing, and ebullition.—*A. R. Butcher, On the Nature and Choice of Aliments*.

Take chalk, ignite it in a crucible, and then powder it; put it into strong spirit of nitre, 'till it becomes sweetish, and makes no *effervescence* upon the injection of the chalk.—*Grew*.

When gaseous matter is suddenly extricated with a hissing sound during a chemical mixture, or by the application of a chemical solvent to a solid, the phenomenon, from its resemblance to that of simmering or boiling water, is called *effervescence*. Up to the eighth century Rome had not been absolutely discovered from the ancient and decrepit civilisation of the old empire. After a short period of subjection to the Ostrogothic kingdom, by the conquest of Justinian she had sunk into a provincial city of the Eastern realm. In the eighth century she suddenly, as it were, burst the bonds of her connexion with the older state of things, disjoined herself for ever from the effete and hapless East, and placed herself at the head of the rude . . . and vigorous civilisation of the West.—*Milman, History of Latin Christianity*, b. iv. ch. ix.

Efficiency. s. Efficient character; agency; production of effects; power.

The manner of this divine *efficiency* being far above us, we are no more able to conceive by our reason, than creatures unreasonable by their sense are able to apprehend after what manner we dispose and order the course of our affairs.—*Hooker, Ecclesiastical Polity*.

Striving against conscience has no special productive *efficiency* of this particular sort of sinning, more than of any other.—*South, Sermons*.

They were not content merely to know that one phenomenon was always followed by another: they thought that they had not attained the true aim of science, unless they could perceive something in the nature of the one phenomenon, from which it might have been known or presumed previous to trial that it would be followed by the other: just what the writer, who has so clearly pointed out their error, thinks that he perceives in the nature of the phenomenon volition. And to complete the statement of the case, he should have added that these early speculators not only made this their aim, but were quite satisfied with their success in it; not only sought for causes which should carry in their mere statement evidence of their *efficiency*, but fully believed that they had found such causes.—*J. S. Mill, System of Logic*, iii. 2, 9.

efficient. adj. Causing effects; that makes the effect to be what it is.

a. As opposed to Final.

Your answering in the final cause, makes me believe you are at a loss for the efficient.—*Collier, Essay on Thought.*

b. As opposed to Metaphysical. Physical; material; real.

Of course the religious ground of the nationality of the Church consists in its claim of spiritual and personal descent from its inspired founders; but the constitutional ground of its title is in the law; and the actual ground, or, so to speak, the efficient or material cause, of its standing in the law, is to be found in its possession of a preponderance of the social forces, of which law itself is only one.—*Gladstone, The State in its Relations with the Church, ch. vi.*

The notion of cause being the root of the whole theory of induction, it is indispensable that this idea should... be, with the utmost practicable degree of precision, fixed and determined.... I premise, then, that when... I speak of the cause of any phenomenon, I do not mean a cause which is not itself a phenomenon; I make no research into the ultimate, or ontological cause of anything. To adopt a distinction familiar in the writings of the Scotch metaphysicians, and especially of Reid, the cause with which I concern myself are not efficient, but physical causes. They are causes in that sense alone, in which one physical fact is said to be the cause of another. Of the efficient causes of phenomena, or whether any such causes exist at all, I am not called upon to give an opinion. The notion of causation is deemed, by the schools of metaphysics in vogue at the present moment, to involve a mysterious and most powerful tie, such as cannot, or at least does not, exist between any physical fact and that other physical fact on which it is invariably consequent, and which is popularly termed its cause; and thence is deduced the supposed necessity of ascending higher, into the essences and inherent constitution of things, to find the true cause, the cause which is not only followed by, but actually produces, the effect. No such necessity exists for the purposes of the present inquiry, nor will any such doctrine be found in the following pages. But neither will there be found anything incompatible with it.... Among modern philosophers, Leibnitz laid it down as a self-evident principle that all physical causes without exception must contain in their own nature something which makes it intelligible that they should be able to produce the effects which they do produce. Far from admitting volition as the only kind of cause which carried internal evidence of its own power, and as the real bond of connexion between physical antecedents and their consequents, he demanded some naturally and per se efficient physical antecedent as the bond of connexion between volition itself and its effects.... The Cartesian... affirmed it to be impossible that a material and a mental fact could be causes one of another. They regarded them as mere occasions on which the real agent, God, thought fit to exert his power as a cause. When a man wills to move his foot, it is not his will that moves it, but God (they said) moves it on the occasion of his will. (God, according to this system, is the only efficient cause, not quâ mind, or quâ endowed with volition, but quâ omnipotent.... All this, undoubtedly, shows that it is the disposition of mankind in general, not to be satisfied with knowing that a fact is invariably antecedent and another consequent, but to look out for something which may seem to explain their being so—something *à la* *deus ex machina*—*J. S. Mill, System of Logic, lib. 5, c. 2.*

efficient. s. Efficient cause.

God, which moveth meer natural agents as an efficient only, doth otherwise move intellectual creatures, and especially his holy angels.—*Hooker, Ecclesiastical Polity.*

There are so many questions concerning the efficient, the form, the matter of general councils, and their manner of proceeding, and their final sanction, that after a question is determined by a conciliary assembly, there are perhaps twenty more questions to be disputed before we can, with confidence, either believe the council upon its mere authority, or obtrude it upon others.—*Jeremy Taylor, Liberty of Prophecy, § 4.*

Observations of the order of nature carry the mind up to the admiration of the great efficient of the world.—*Sir M. Hale.*

Observe these numerous wrongs in *effigy*.

The gods have said it from the devouring sea. *Garth.*

The word *effigy* is reckoned by P. Heylin, in 1656, amongst unusual and uncouth expressions.—*Johnson.*

of writing, and in the delivery, to give the full force to what is said.—*Whately, Elements of Rhetoric*, ch. iii. § 5.

With the *accent* on the *second* syllable.

But chose to serve her still without a livery.

Mr. Charles Murcutt.

Dr. Johnson places the accent on the second syllable of the word; though the example, which he brings from Pope, presents it on the first. ested food at the natural vents.

Neither the procuring of ready concoction, nor

Egg. s. [A.S. *egg*.]

1. Embryo, with its envelopes, of such ani-

mals as do not bring forth their young

alive. (Its popular application is to what

is laid by birds and certain reptiles. In

Physiology, however, the spawn of frogs

and fishes is merely a collection of *eggs*.

With the lower animals and vegetables, and

even with mammals, the object is really

the same; *ovum*, however, and *ovule* are

the technical names, being simply transla-

tions of *egg* into Latin, indeed the same

word.)

An *egg* was found, having lain many years at the

bottom of a moat, where the earth had successively
overgrown it; and this *egg* was found to be the hard-
ness of a stone, and the colour of the white and
yolk perfect.—*Bacon.*

Therefore think him as the serpent's *egg*.
Which, hatch'd, would, as his kind, grow in-

Applied, by Milton, either inaccurately or provincially, to the *honeysuckle* or some plant of similar habit.

Through the sweet-Air or the vine,
Or the twisted egplantine. *L'Allegro*.

Ego. A Latin pronoun meaning I; with which it is the same word, the *g* being softened down to the semivowel *y*, and so, apparently, lost in the present diphthongal term. In German, *ich*; Danish, *jeg*; Swedish, *jag* (the *j* sounded as *y*); A.S. *ic*. In English, so far as it is used, it is a substantive rather than a pronoun, meaning the thinking subject whatever it may be. Its chief application is in those systems of philosophy which take us their starting-point the person thinking, as cognized by himself; this being either the only absolute certainty, or the nearest approach to one. All beyond, i.e. the rest of the world, is non-*ego*; concerning the reality of which, doubts are far more possible than in the case of the thinking individual or Subject. The German form is the vernacular *ich*; Germany being the country in which the philosophy under notice is the most developed. In England, however, *ego* is the better form, as being the most convenient base for derivatives. Laying aside the rare form *Egomism*, we have two approximately concurrent forms; one in *-ist* simply, the other in *-ist*. As both exist, it is better to distinguish between them than to use them as synonyms; the form in *-ism* being restricted to the purposes of philosophy.

(For examples see extracts under *Egotism* and *Egotize*.)

Egotism. s. Reference to Ego.

Napoleon, himself not the superfluous of great men, and ballasted sufficiently with prudence and egoisms, had, nevertheless, as is clear enough, an idea to start with; the idea that democracy was the crime of man, the right and infinite cause.—*Carlyle, Critical and Miscellaneous Essays*, Sir Walter Scott.

Egotist. s. One who refers much or all to Ego.

Hitherto Des Cartes was uncertain of every thing but his own existence, and the existence of the operations and ideas of his own mind. Some of his disciples, it is said, remained at this stage of his system, and got the name of *Egotists*.—*Reid*.

Egotty. s. Egoism. Rare.

This innocent impudence, which I have all along taken care to carry on, as it then was of some me, has since been of regular service to me, and, by being mentioned in one of my papers, effectually recovered my *egotty* out of the hands of some gentlemen who endeavoured to correct it for me.—*Swift, Harrison's Teller*, no. 28. (Ord MS.)
If you would permit me to use a school term, I would say the *egotty* remains.—*Wallington, Religion of Nature delineated*, sect. 9, § 8. (Ord MS.)

Egomism. s. Egotism. Rare.

That kind of scepticism called *egomism*.—*A. Butler, Enquiry into the Nature of the human Soul*, ii. 21: 1787.

Egotism. s. Fault committed in writing by the frequent repetition of the word *ego*, or I; too frequent mention of a man's self, in writing or conversation.

The most violent *egotism* which I have met with, in the course of my reading, is that of Cardinal Wolsey's; *ego et rex meus*, I and my king.—*Spectator*.

Egotist. s. One who is always repeating the word *ego*, I; talker of himself.

A tribe of *egotists*, for whom I have always had a mortal aversion, are the authors of memoirs, who are never mentioned in any works but their own.—*Spectator*.

To return for a moment to the parallel which we have been attempting to draw between Milton and Dante, we would add that the poetry of these great men has in a considerable degree taken its character from their moral qualities. They are not *egotists*. They rarely outtrade their idiosyncrasies on their readers. They have nothing in common with those modern beggars for fame, who extort a pittance from the compassion of the inexperienced by exposing the nakedness and sores of their minds.—*Maccusley, Critical and Historical Essays*, Milton.

Egotistical. adj. Having the character of an Egotist.

The sonnets . . . are . . . dignified by a sobriety and greatness of mind to which we know not where to look for a parallel. It would, indeed, be scarcely safe to draw any decided inferences as to the character of a writer from passages directly *egotistical*. But the qualities which we have ascribed to Milton, though perhaps most strongly marked in those parts of his works which treat of his personal feelings, are distinguishable in every page, and impart to all his writings, prose and poetry, English, Latin, and Italian, a strong family likeness.—*Maccusley, Critical and Historical Essays*, Milton.

Egotize. v. n. Write or speak as an egotist.

I *egotize* in my letters to thee, not because I am of much importance to myself, but because to thee both *ego* and all that *ego* does are interesting. *Cooper, Letter to Lady Hesketh*. (Rich.)

Egre. s. [A.S. *egor*.] Sudden and rapidly rising tide.

From the peculiar disposition of the earth at the bottom, wherein quick excitations are made, may arise those *egres* and flows in some estuaries and rivers; as is observable about Trent and Humber in England.—*Sir T. Browne, Vulgar Errors*.

Egregious. adj. [Lat. *egregius*, i.e. *e grege*, separated or selected from the flock.] Eminent; remarkable; extraordinary.

Al! me, most credulous fool!

Egregious murderer. *Shakespeare, Cymbeline*, v. 2.
If any person of good desert shall wilfully be a delinquent, the same man ought, notwithstanding his former service, to be punished. Horatio, that in combat gained the victory against the Albans, having incidentally slain his own sister, was notwithstanding his *egregious* act and the fresh memory thereof, called into trial of his life, and with great difficulty obtained pardon.—*Sir W. Raleigh, Arts of Empire*, ch. xxvi.

We may be bold to conclude, that these last times, for insolence, pride, and *egregious* contempt of all good order, are the worst.—*Hooker, Ecclesiastical Polity*, preface.

Reader, try by this the *egregious* impudence of this fellow.—*Bishop Hall, Honour of the married Clergy*, p. 104.

Voluntarily therefore and of right we congratulate this accession of dignity to your *egregious* merits, and the most worthy guardian of so much virtue.—*Milton, Letters of State*.

He might be able to adorn this present age, and furnish history with the records of *egregious* exploits, both of art and valour.—*Dr. H. More, Antidote against Atheism*.

And hence the *egregious* wizard shall foredoom

The fate of Louis, and the fall of Rome. *Pope*.

Eminently bad; remarkably-vicious. This is the usual sense. Dr. Johnson says, This remark requires further notice. In the old dictionary of Hubert, *egregious* is defined by *excellent* only. In that of Cockerham, it has the same definition, with this addition, 'sometimes vile, base.' At the close of the sixteenth century, however, the bad sense of the word seems to have been common; for Gabriel Harvey having used the phrase 'an *egregious* argument,' he is thus reprehended by Nashe, in Four Letters Confuted, 1598: '*Egregious* is never used in English but in the extreme ill part.' Yet Raleigh and Milton, as I have shown in the additions to the first definition, considered the word as meaning eminently good, or illustrious, or famous.—*Todd*.

Egregiously. adv. In an egregious manner.

Make the Moor thank me, love me, and reward me,
For making him *egregiously* an ass.

And practising upon his pence and quiet,
Even to madness. *Shakespeare, Othello*, ii. 1

He discovered that, beside the extravagance of every article, he had been *egregiously* cheated.—*Arbuthnot, John Bull*.

Egress. s. [Lat. *egressus*, part. of *egredior*—step or walk out; *egressio*, -onis—stepping or walking out.] Power or act of going out of any place; departure.

Thou shalt have *egress* and regress.—*Shakespeare, Merry Wives of Windsor*, ii. 1.

In a nursery a maid alone, if she cannot have *egress*, before her window you shall have an old woman, or some peevish gossip, tell her some tales of this clerk, and that monk, describing or commending some young gentleman unto her.—*Barton, Anatomy of Melancholy*, p. 263.

With the accent on the second syllable.

Gates of burning adamant,
Bar'd over us, prohibit all *egress*.

Milton, Paradise Lost, ii. 457.

Egression. s. Act of going out.

No thou may'st have a triumphant *egression*.—*H. Jonson, The Devil is an Ass*.

In the days and periods of their joy and festal *egressions*, they chose to throw some ashes into their children's, some sober remembrance of their fatal period.—*Jeremy Taylor, Rule and Exercise of Holy Living*, ii. § 1.

The vast number of troops is expressed in the swarms; their tumultuous manner of beating out of their sleep, and the perpetual *egression*, which seemed without end, are imagined in the bees pouring out.—*Pope* (paraphrasing *Chapman*).

Cooper's ponderous *egress* verse deduces you every step with some heavy Miltonism; *Chapman* colloquies off with you his own free pace. Take a simile for example. The council breaks up—
Being abroad, the earth was overlaid
With flocks; to them, that came forth; as when
Of frequent bees

Swarms rise out of a hollow rock, repairing the degrees

Of their *egression* endlessly, with ever ridier new
From forth their sweet nest; as their store, still
As it failed, grew.

And never would cease sending forth her clusters to the spring.

They still crowd out so; this flock here, that
There, babbling.

The boldest flowers, Sa, &c., &c.
What endless *egression* of phrases the dog commands!—*Leah, Letter to Coleridge*.

Egret. s. [Fr. *aigrette* tuft of feathers, tuft.]

1. Tuft of feathers forming an ornament so called.

Of the same work were their bases; their head-tires of flowers, mixed with silver and gold, with some spikes of *egrets* among; and, from the top of their dressings, a thin veil hanging down.—*H. Jonson, Masques*.

2. Grallatorial bird so called, the exact and original application of the term being uncertain. (At present, it most generally denotes a species of heron, the *Ardea alba* in the first instance; and, secondarily, or as a term accompanied with a qualifying adjective, the *Ardea Gargetta*; both occasional visitants of the British Isles).

We once received out of Audubon the feathers of a bird shot there, which we suspect to have been the *egret*; this is the only instance, perhaps, of its having been recently found in England. One was shot in Ireland in the year 1748. That it was formerly very frequent here appears by some of the old tales of lore; in the famous forest of Arden, where we find no less than a thousand *egrets*, or *egrets*, as it is differently spelt. Perhaps the eastern they were in as a deity during those days, occasioned their extinction in our islands. Alas! they are still common, especially in the southern parts of Europe, where they appear in flocks.—*Pennant, British Zoology*.

Dr. Fleming remarks that 'it is possible the *egret* may have been referred to, as the most common bird with a crest.' To this opinion Mr. Selby subscribes. *Aigrette* and *egret* are common terms for a tuft of feathers; and the little *egret* appears to have been much too rare a species in this country to have afforded the supply. That the little *egret* ought, however, to be retained in our catalogue as a British bird, which has been denied the following evidence will sufficiently prove.—*Tarrell, British Birds*.

Ibises, storks, *egrets* [the zoological name not given], spoonbills, herons, and the smaller races of sandwicks and plovers are now busily traversing the wet mud in search of the red worm which burrows there, or peering with steady eye to watch the motion of the small fry and aquatic insects in the ripple on the shore.—*Sir J. E. Tennant, Cydon*, pt. ii. ch. ii.

Egret. s. [Fr. *aigret*; perhaps from *aigre* = sour.] Species of cherry.

The sour-cherry, which inclineth more to white, is sweeter than the red; but the *egret* is more sour.—*Bacon*.

Egritudo. *s.* [Lat. *egritudo* - sickness; *ager* = sick.] Ailment; maulady. *Rare.*
I do not intrude to write to the cure of *egritudo* or sickness confirmed. -- *Sir T. Elyot, Castel of Health*, b. iv. (Rich.)

Egyptologist. *s.* One engaged in Egyptology.

(For example see under Hieroglyphics.)

Egyptology. *s.* Study of the archeology of Egypt, especially in its connection with the Hieroglyphics.

(For example see under Hieroglyphics.)

Eider. *s.* [see extract.] Duck so called (*Somateria mollissima*) for the softness and warmth of its down: (generally used as the *first element of a compound*, giving *elder-duck*, *elder-down*; indeed it seems that *down* was the original meaning of the word).

The *elder duck*, though indigenous to some of the northern parts of England, as well as several of the Scottish islands, is only a winter visitor to the southern portions of the kingdom, and that, too, in very limited numbers. It is but rarely killed in Ireland. . . . It has been seen and shot on the Cornish, Devonshire, Dorsetshire, Hampshire, Sussex, and Norfolk coasts. . . . The most southern locality in this country at which this species is known to breed regularly is that visited by Leumann in July, 1769, and has been frequently visited by Mr. Selby, namely, the Fern Islands, situated upon the northern coast of Northumberland. . . . The *elder duck* is also called St. Cuthbert's duck, from the circumstance of its breeding there on a rock called St. Cuthbert's Isle, as well as upon other islands that form the group. . . . The late Earl of Derby's principal menagerie manager, who went to Sweden in the summer of 1830, brought back with him a brood of young *eidera*, which he reared, feeding them on slugs and the bodies of shelled molluscs. Several of these birds were reared at Knowsley. *Eider, eider*, or *idder* is the name applied to this duck in Germany, Sweden, Denmark, and Norway. . . . Young males of the *eider* are, at first, like the adult female. . . . The wingspan of the male *eider* measures nine inches in length. -- *Varroch, British Birds*.

Eight. *s.* Same as Eyot.

Eight. *pr.* [A.S. *cahta*.] Cardinal number, or numeral, so called. In English notation, 8; in Roman, viii. As this is, alphabetically, the first of a very definite series of words, the remarks that apply to the entry of the numerals in general will be made here. It is submitted to the reader that the numerals are words which neither definition nor example will explain. They are not only used by everyone, but every time they are used their import explains itself. *One* is naturally single; 'all the others naturally plural. Nevertheless, *one* may be plural when it means a *unit*, and when two or more units (*ones*) are spoken of; and *two*, *three*, *four*, &c., may be singular when they mean a collection of *two*, of *three*, of *four*, and the like. In such cases, the word, as a part of speech, ceases to be a pronoun, and becomes a substantive, and, like other substantives, takes a plural form; as 'three *ones* make three'; 'two *uns* equal twenty.' For some of these collections we have separate and true substantial names; such as *unit* = a one; *pair*, *couple*, *brace*, &c. = a two; *leash* = a three; *dozen* = a twelve; *score* = a twenty; whence *half-dozen* = a six, and *half-score* = a ten. *Mound*, *dyad*, *triad*, *tetrad*, *pentad*, and *decad*, all of Greek origin, are terms of a more exotic and artificial character.

This singular character of a plural number, when the units of which it is composed are taken in mass, or collectively, is well illustrated by the numbers above *ten*, or the difference between the terminations *-teen* and *-ty*.

Thirteen = 10 + 3; *-teen* being merely *ten* in another form.

Thirty = 10 x 3; *-ty* being a contraction of *-* (a *ten*, or a *decad*), a word long

obsolete and a separate term, and one which originated at that comparatively early epoch in our language when *ten*, like the Latin *decem* and the Greek *deka*, contained the sound of either *g* or *k*; a sound of which the nearest representative in the German family of languages is the *k* of the Mesogothic *taihun*.

Of true derivative forms the numerals have only one, viz. the ordinal, formed by the addition of *-th* (*ten*, *ten-th*), with or without certain internal changes (*five*, *fifth*, &c.); and even these are open to an exception. Several high authorities, on the strength of such words as the Danish *tyo* and the Greek *deka*, on the one side, and the *-m-* in words like *primus*, *septimus*, &c., on the other, have held that, where the cardinal ends in *m* or *n*, the ordinal form has (so to say) been reflected back upon it. Hence in *seo-en*, *ni-ne*, *teh-* (*teg-* or *tek-*) *-n*, the final letter is not cardinal, but ordinal. This, however, belongs to the department of comparative philology rather than to lexicography.

In most languages, the first two cardinals form the ordinals from some second basis; as *fir-st*, from the root of *fore*, and *second*, from the Latin *secundus*, connected with *sequor* = follow: a fact which theoretically excludes such ordinals as *oneth* and *twoth*; though, as far as grammar goes, they are not impossible forms. In some respects, *oneth* is a numeral, as in *twenty-odd*. He would be a bold man, however, who wrote *odd-th*; though there are many cases where the word would be convenient. Practically speaking, all the combinations of which a numeral is a basis, except the ordinal, are compounds; the rule being (as has been shown in respect to the forms in *-teen* and *-ty*) that where there is Addition the second element is *-ten*; where Multiplication, *-ty* = a collection of *teus*. In few cases does that agglutination of separate words which constitutes a compound so closely take the guise of a derivative as in the Numerals.

These preliminaries show that, except in particular cases, the entry of one numeral is, in respect to authority, derivation, and the like, a formula for the entry of all the others.

Eight. *s.*

1. Collection of eight.

2. Figure of 8 in skating.

'Till I, tired out
With cutting *eights* that day upon the pond,
Where, three times slipping from the outer edge,
I bump'd the ice into three several stars,
Fell in a doze. *Tennyson, The Epic.*

Eighteen, or Eighteen. *pr.* [*eight* + *ten*, the second *t* being omitted, not only in speaking, but in spelling.] Cardinal of 8 + 10.

The accent falls on either syllable, according to the element upon which the stress is laid. Thus in counting from *ten* to *twenty* we say *thirteen*, *fourteen*, *fifteen*, &c., whereas 'from 3 to 13' is 'from *three* to *thirteen*.' Strictly speaking, then, *eighteen* and *eighteen* are different words; though it would be an overrefinement to treat them as such in the entry. It may be added that, etymologically, the spelling of both 18 and 80 should give two *ts* = *eight* + *ten*, *eight* + *ty*. This doubling, however, of the consonant, though real, has long been ignored both in spelling and speaking.

Eighteenth, or Eighteenth. *adj.* Ordinal of the preceding.

Eightfold. *adj.* (often with an adverbial construction, as, 'it increased *eightfold*.) Multiplied by eight.

Eighth. *adj.* Ordinal of eight.

Eightly. *adv.* As the eighth in order.

Eightieth. *adj.* Ordinal of eighty.

Eighty. *pr.* [*eight* + *ty* = *tig*.--see *Eighteen*.] Cardinal of 8 x 10.

Eisel. *s.* [A.S. *esil*; N.Fr. *aisil* = vinegar.]

1. Vinegar; verjuice; any acid.

Cast in thy mind
How thou resemblest Christ, as with *sovereign* poison,
If thou pause thy taste; remember therewithall
How Christ for thee tasted *eisel* and gall. *Sir T. More.*

Like a willing patient, I will drink
Poisons of *eyes*, against my strong infection. *Shakespeare, Hamlet 2.*

In the following extract from the well-known rant of Hamlet at the grave of Ophelia, the import of the word is doubtful; some explaining it *vinegar*, others as the river Ysel. In the quarto of 1603 the reading is *vessels*; in the later ones, *esil*; in the folio, *exile*:

'Swoonds! show me what thou'll do.
Woo't weep? woo't fight? woo't fast? woo't tear
thyself?

Woo't drink up *eisel*? eat a crocodile?
I'll do't. *Shakespeare, Hamlet, v. 2.*

2. River so called.

Either. *pron.* [see remarks at end of *Either, adv.*]

1. One of two indifferently.

Leopoldus flatters both,
Of both is flattered; but he neither loves,
Nor either cares for him. *Shakespeare, Antony and Cleopatra, ii. 1.*

As they had been a very pair,
So that a man would almost swear,
That *either* had been *either*. *Drayton, Nymphidia.*
Goring made a fast friendship with Dicky, *either* of them believing he could deceive the other. *Lord Clarendon, History of the Great Rebellion.*

I do not ask whether bodies do so exist, that the motion of one body cannot really be without the motion of another: to determine this *either* way, is to lay the question for or against a vacuum. -- *Locke.*

2. Each.

In the process of natural begets, there seem some to be creatures placed, as it were, in the confines of several provinces, and participating something of *either*. -- *Sir M. Hale.*

Sev'n times the sun has *either* tropick view'd,
The winter banish'd, and the spring renew'd. *Dryden, Virgil's Æneid.*

Either is often used improperly instead of *each*; as, 'Nadab and Abihu, the sons of Aaron, took *either* (each) of them his censor.' *Each* signifies *both* of them, taken distinctly or separately; *either* properly signifies only the one, or the other, of them, taken disjunctively. For which reason the like expression in the following passages seems also improper: 'They crucified two other with him, on *either* side one; and Jesus in the midst.' (Mt. John, xii. 18.) 'On *either* side of the river was there the tree of life.' (Rev. xii. 2.) *Lowth's Grammar*. -- *Johnson.*

3. Any one of a number exceeding two.

Henry VIII. Francis I. and Charles V. were so provident, as scarce a palm of ground could be gotten by *either* of the three, but that the other two would set the balance of Europe upright again. -- *Bacon.*

4. One or each (of two) in the reciprocal construction. *Rare.*

Since that they [married persons] have received *either* other from God, let them herein strive to show their thankfulness unto God, by endeavouring to bring *either* other nearer to God, by helping *either* other forward in the good wages of God; do *either* with other, as Anna did with her sonne Samuel, as she had him of God, so she bestowed him on God againe; returned *either* other again to God, and laboured to returne them better than they received. -- *Gataker, Wife in Debt*, p. 108. (Ord. Mk.)

Either. *adv.* In the way of an alternative.

We never heard of any ship that had been seen to arrive upon any shore of Europe; no nor of *either* the East or West Indies. -- *Bacon, New Atlantis.*

What perils shall we find,
If *either* place, or time, or other course,
Cause us to alter th' order now assigned? *De Witt.*

Either your brethren have miserably deceived us, or power confers virtue. -- *Swift, Letter to Pope.*

A distributive adverb, answered by *or*; *either* the

The chymical club concluded; and A. W. paid Mr. Stuebel 30 shillings, having, in the beginning of the class, given 30 shillings beforehand. — *Life of A. Wood*, sub ann. 1670.

Elaine. s. [Gr. *ἑλαιον* = oil.] In Chemistry. See extract.

The fluidity [of the fat oils] is very various, some being solid at ordinary temperatures, and others remaining fluid at the freezing point of water. Liquefied oil, indeed, does not congeal till cooled from 5° to 15° below 0° F. The same kind of need mutually affords oils of different degrees of fluidity, so that in the process of refrigeration one portion concretes before another. Chevreul, who was the first to observe this fact, considers all the oils to be composed of two species, one of which resembles wax, and was thence styled by him *stearine*; and another, which is liquid at ordinary temperatures, and was called *elaine*, or *alcine*. By refrigeration and pressure between the folds of blotting paper, or in linen bums, the fluid part is separated, and the solid remains. By heating the paper in water, the liquid oil may be obtained separate. When alcohol is boiled with the natural oil, the greater part of the *stearine* remains undissolved. — *Enc. Dictionary of Arts, Manufactures, and Mines*.

Baromet obtained *elaine*, or *alcine*, by exposing olive oil to a temperature of about 21° F. in order to cause the condensation of the *margarine*. — *Turner, Chemistry*, p. 150.

Elamp. v. a. Shine; give light. *Barbarous*.
As when the cheerful sun, *clamping* wide,
Gleams all the world.

G. Fletcher, Christ's Victory, c. 1.
Giles [Fletcher] seems to have more vigour than his elder brother, but less sweetness, less smoothness, and more affectation in his style. This, indeed, is deformed by words neither English nor Latin, but simply barbarous, such as *clamping*, *oblation*, *deprolution*, *purpuration*, *glitterant*, and many others. — *Italian, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*, pt. iii. ch. v.

Elance. v. a. [Fr. *élancer*.] Throw out; dart; cast as a dart or lance.

2. *Lapse. Hure.*

The attainment of this, however, [Doctor of Laws] was far from having upon Burman that effect which has been too often observed to be produced in others; who, having in their own opinion no higher object of ambition, have *elapsed* into idleness and security, and spent the rest of their lives in lazy enjoyment of their unacquired dignities. — *Johnson, Life of Burman*, (3rd MS.).

Elastic. adj. [Fr. *élastique*.] Having the power of returning to the form from which it is distorted or withheld; springy; having the power of a spring.

If the body is compact, and bends or yields inward to pressure, without any sliding of its parts, it is hard and *elastic*, returning to its figure with a force arising from the mutual attraction of its parts. — *Sir I. Newton, Opticks*.

The most common diversities of human constitutions arise from the solids, as to their different degrees of strength and tension, in some being too lax and weak, in others too *elastic* and strong. — *Arbuthnot, On the Nature and Choice of Aliments*.

Elbow. s. [A.S. *elboga*.]

1. Next joint or curvature of the arm below the shoulder.

In some fair evening, on your *elbow* laid,
You dream of triumphs in the rural shade. — *Pope*.
Although the bones of the pectoral limbs are swathed in skin, the fins project more freely from

the trunk, the *elbow* is better marked; the limb-joints are synovial, not syndesmoic merely, as in Cetacea; and although there are clearer indications of the digits in the fin of Sirenia, none of the digits have more than three phalanges. — *Owen, Anatomy of Vertebrates*, p. 437.

2. Any flexure or angle.

Fruit trees, or vines, set upon a wall between *elbows* or buttresses of stone, ripen more than upon a plain wall. — *Bevon*.

At the elbow. Near; at hand.

Quick, quick; fear nothing, I'll be at thy *elbow*.

Jog the elbow. Draw attention; waken up; remind a person of anything.

I have long gone about with the conviction that I had a work to do — a Work, if you like, with a great W; a purpose to fulfil; a claim to leap into, a Cartesian horn and foot; a great social evil to discover and to remedy. That conviction has pursued me for years. It has dogged me in the busy street; seated itself by me in the lonely study; *jogged my elbow* as it lifted the wine-cup at the festive board; pursued me in the maze of Rotten Row; followed me in far lands. On Brighton's shingly beach or Margate's sand; the voice outsped the roaring of the sea; it whistles in my nightcap, and it whispers, 'Wake, slumberer, thy work is not done yet.' — *Thackeray, Book of Snobs*, ch. 1.

Granger, Ode on Solitude.

In the following extract we find it followed by similar terms connected with the shoulder.

Men of real merit will, if they persevere, at last reach the station to which they are entitled, and intruders will be ejected with contempt and derision. But it is no small evil that the avenues to fame should be blocked up by a swarm of noisy, insidious, *elbowing* pretenders, who, though they will not ultimately be able to unknock good their own entrance, hinder, in the mean time, those who have a right to enter. All who will not disgrace themselves by joining in the unseemly scuffle must expect to be at last hustled and *shouldered* back. — *Macaulay, Critical and Historical Essays, Robert Montgomery's Poems*.

Elbowroom. s. [the accent stands as in the previous edition; the present editor thinks that *elbow-room* is the commoner pronunciation, so that the combination gives two words rather than a compound, as is certainly the case with *Elbowchair*.] Room to stretch out the elbows

on each side; perfect freedom from confinement; easy freedom.

Now my soul hath elbowroom;
It would not out at windows nor at doors.
Shakespeare, King John, v. 7.
The natives are not so many, but that there may be elbowroom enough for them, and for the adventures also.—*Bacon.*

A politician must put himself into a state of liberty to provide elbowroom for counselmen to have its full play in.—*South, Sermons.*

These (wit and humour) are faculties which never appear in full lustre but when the mind is perfectly at ease, and, as an excellent writer says, enjoys her elbow-room.—*Smallest, Expedition of Humphrey Clinker.*

Two hours will not afford elbow-room.—*Recreations of a Country Parson, p. 334.*

ELD. s. Old age; decrepitude; old generation, or old people in general. *Obsolete, or archaic.*

Her heart with joy unwonted fully swell'd,
As feeling wondrous comfort in her weaker eld.
Spenser, Faerie Queen.

Thy blessed youth
Becomes as aged, and doth beg the aims
Of palsied eld.

Shakespeare, Measure for Measure, iii. 1.
They count him of the green-hair'd eld. *Chapman.*
He thought it touch'd his deity full near,
If like-wise he seem'd fair one would not,
Thereby to wipe away th' infirmities
Of long unrequited bed and childless eld.

Milton, On the Death of a fair Infant.
Roll on, vain days! till reckless may go down,
Since Time hath left what'er my soul enjoy'd,
And with the file of eld mine earlier years alloy'd.

Byron, Child Harold, ii. 99.
That the prince of the powers of darkness, passing
by the flower and pomp of the earth, should lay
propitious siege to the weak fantasy of indolent eld—has neither likelihood nor unlikelihood a priori to us, who have no measure to guess at his policy, or standard to estimate what rate those idle souls may fetch in the devil's market.—*Lamb, Essays of Elia, Witches and other Night Fancies.*

Elder. adj. [This and *eldest* are the Anglo-Saxon comparative and superlative of *cold*—old. This means that there is in English no such positive as *eld*; and that, as examples of the Anglo-Saxon degrees of comparison, the words are perfectly regular. *Elder* and *eldest* are derived from *cold*, just as *older* and *oldest* are from *old*; and the true explanation of their form lies in the fact that, in certain words, the Anglo-Saxon not only added *-r*, or *-st*, to the positive, but changed the vowel as well. Thus—

Lang, Leage, Leagest—*Lang, &c.*

Strang, Stronger, Strongest—*Strang, &c.*

Georg, Ganger, Gangerst—*Georg, &c.*

Securt, Segetre, Segetrest—*Securt, &c.*

Heah, Hyrre, Hyrrest—*Heah, &c.*

Fald, Fylre, Fylrest—*Fald, &c.*

In the word under notice this change of vowel, though out of use with the others, is still retained; the result being that we have two concurrent formations—*old, older, oldest*, and *ald, elder, eldest*, with a difference of import to match. The forms in *o* mean simply *more* and *most* old in general; as, John is *older* than Thomas, &c. The forms in *e* mean *older*, or *oldest*, as the member of some special class; as, John is the *elder* brother of Thomas, and the *eldest* son of James. *Elder*, moreover, can be used as a substantive, having the plural *elders*.]

1. Opposed to *younger*.
They bring the comparison of younger daughters conforming themselves in attire to their elder sisters.—*Hooker, Ecclesiastical Polity.*
How I firmly am resolv'd, you know;
That is, not to bestow my youngest daughter,
Before I have a husband for the eld.

Shakespeare, Twelfth Night, ii. 1.

Among the Lacedæmonians, the chief magistrates, as they were, so they are called, *elder men*.—*Sir W. Raleigh, History of the World.*

The elder of his children comes to acquire a degree of authority among the younger, by the same means the father did among them.—*Sir W. Temple.*

2. Older.

Let still the woman take
An elder than herself; no wears she to him,
So sways she level in her husband's heart.
Shakespeare, Twelfth Night, ii. 4.

Fame's high temple stands;
Stupendous pile! not rear'd by mortal hands!
White'er proud Rome, or artful Greece befall,
Or elder Babylon, its frame excell'd.
Pope.

Elder. s.

1. One who is older than another.

Many nations are very superstitious and diligent observers of old customs, which they received by continual tradition from their parents, by recording of their baris and chronicles, in their songs, and by daily use and example of their elders.—*Spenser, View of the State of Ireland.*

At the board, and in private, it very well becometh children's innocency to pray, and their elders to say Amen.—*Hooker, Ecclesiastical Polity.*

2. Individuals who lived at an earlier period; forerunners in point of time: (as the Englishmen of the time of Elizabeth as compared with those of the present reign). Ancestory in most cases, conveys the notion of lineage as well, which this word does not. See *Forefather*.

Says the goose, If it will be no better, e'en carry your head as your elders have done before you.—*Sir R. L. Estrange.*

I love my patience, and I own it too,
Where works are censur'd, not as bad, but new;
While, if our elders break all reason's laws,
Those fools demand, not pardon, but applause.
Pope.

3. One whose age gives him a claim to credit and reverence.

Believe not an elder, but interest him as a father, and the younger men as brethren.—*Timothy, v. 1.*
The blushing youth their virtues now disclose,
And from their seats the reverend elders rose.
G. Sandys.

4. Specially applied to certain magistrates, or office-bearers, under different constitutions, particularly the ecclesiastical polity of Scotland, where it translates *Presbyter*.

Plain-bitten gown, an assembly be-wail
Of clerks and *elders* and; like the rude
Chorus of presbytery, where laymen ride
With the tame woolpack clergy by their side.
Cleaveland.

Ten of the principal members of the council of elders were appointed ambassadors.—*Arnold, History of Rome, ch. xlii.*

[Connected with this sense is the power of the A.S. *caldorman*, which in Todd's edition is entered twice, (1) as *caldorman*, (2) as *caldorman*.

'The king, archbishop, eorles, bishops, *caldormen*, and other decesses, may suffice to prove them to be acts of parliament.' (Snaller, Rights of the Kingdom, p. 41.)

'These *caldormen* who were ranked with bishops in the Saxon laws, and in the old Latin translation called *abbates*, were such as had counties or other territories under their government, and had the same power and jurisdiction as the earls had afterwards. The word *caldormen* signifies no more than elder, or senator; but it signified among the Saxons a duke, an earl, a nobleman, and petty viceroy, a consul.' (Shelton, Notion of Victor's Abstract of Hicet's Thesaurus, p. 60.)

Enjoining all his *caldormen* and sheriffs immediately to apply themselves to learning, and to quit their offices (Bucke, Abridgement of English History, ii. ch. iv.)

The word, however, is Anglo-Saxon rather than English; the English term being *Alderman*, and the office which it indicates wholly different from what it was before: not only the Norman, but the Danish, conquest. That it is to be found (the form in *-a-* being the true one) in modern writers is true; but so have many other words of like character—words which are not only dead as *numa*, but which have nothing, as *objects*, to correspond with them.

'The dignity next in importance to the royal is that of the *caldorman*, or duke. The proper Anglo-Saxon name for this officer, as ruler and leader of an army, is *Hertoga*. . . a word compounded of *Here*, an army, and *Toga*, a leader.

But, inasmuch as the dual functions of the Anglo-Saxon polity were by no means confined to the service in the field, the peculiar title of *Hertoga* is very rarely met with, being for the most part replaced by *caldorman*, or *aldorman*, which denotes civil as well as military preeminence. . . The word *elder*, or *ahler*, in Anglo-Saxon, denotes princely dignity without any designation of function whatever. . . It is derived

from an adjective implying age, though practically this idea does not by any means survive in it, any more than it does in the word *senior*, the origin of the feudal term *seigneur*. . . The new constitution, introduced by Chut, reduced the *caldorman* to a subordinate position; over several counties was now placed one earl, or earl, in the northern sense a jarl, with power analogous to that of the Frankish dukes. The word *caldorman* itself was used by the Danes to denote a class, gentle indeed, but very inferior to the princely officers who had previously borne the title. It is under Chut . . . and the following Danish kings, that we gradually lose sight of the old *caldorman*: the king rules by his earls, and his earls rule by the *caldormen* which from the earls. From this time the king's writs are directed to the earl, the bishop, and the sheriff of the county; but in no one of them does the title of the *caldorman* any longer occur; whilst those sent to the towns are directed to the bishop and the portewer, or portewer of the city. Gradually the old titles cease altogether, except in the cities, where it denotes an inferior judicature, much as it does among ourselves at the present day.' (Kenble, The Saxons in England, ii. ch. iv.)

Elder. s. (often used adjectivally, especially with *tree* and *berry*, or as the first element in a compound.) [A.S. *elder*.] Name of certain native trees of the genus *Sambucus*, the common elder and the dwarf elder.

Look for thy reward
Among the nettles at the *elder* tree,
Which overshades the mouth of that same id.

Shakespeare, Titus Andronicus, ii. 3, letter.
Elderly. adj. Bordering upon, or showing signs of, old age.

I have a race of orderly, *elderly* people of both sexes at command, who can brawl when I am d-d, and tread softly when I am giddy.—*Swift, Letter to Pope.*

Eldership. s. State, condition, or quality, of that which is an elder.

1. Seniority; primogeniture.

The world, while it had scarcity of people, underwent no other dominion than paternity and *eldership*.—*Sir W. Raleigh.*

That all should Alibech adore, 'tis true;
But some respect is to my birthright due:
My claim to her by *eldership* I prove.

Dryden, Indian Emperor.

Nor were the *eldership*

Of Artaxerxes worth our least of fears,
If Memnon's interest did not prop his cause. *Race.*

2. Presbytery; ecclesiastical senate; kirk-session.

That controversy sprang up between Beza and Erasmus, about the matter of excommunications; whether there ought to be in all churches an *eldership*, having power to excommunicate, and a list of that *eldership* to be of necessity certain chosen out from amongst the laity. *Hooker, Ecclesiastical Polity, preface.*

Eldrest. adj.

1. Oldest: (as a son or brother).

We will establish our estate upon
Our *eldrest*, Malcolm, whom we name hereafter
The prince of Cumberland.

Shakespeare, Macbeth, i. 4.
The mother's and her eldest daughter's grace,
It seems, had trib'd him to prolong their days.
Dryden.

2. Simply oldest. *Rare.*

Their *eldrest* historians are of suspected credit even amongst themselves.—*Bishop Stillington, Origines Sacre. (Ord MS.)*

Elecampane. s. [Lat. ? *inula*, ? *helenium*, ? *campane*, ? *Campania*.] That the foregoing analysis is, in the main, a correct one, is shown by the following forms:—Fr. *cinule uniee*, *unice*, *cinule campane*; Italian, *enula*, *enula campana*, *ella*; Spanish, *enula campana*, *ala*. In German, the *helen* in *helenium* takes the addition of *-t*, giving *abant*, *abantur*; the Danish being *aban*, *abandar*, and, by a natural antithesis, *St. Ellen's root*. Whether the *ele-* is the *-ula* in *in-ula*, or the *helen* in *helenium*, is uncertain.] Plant of the genus *Inula*, especially the *Inula Helenium*, the root of which, from its stimulant, pungent, or aromatic flavour, is used as a medicine or condiment.

The Germans have a method of candying *elecampane* root like pinks, to which they prefer it, and call it German spice.—*Sir J. Hill, Materia Medica.*

In this [the bitter extractive] resides the tonic

property of *decumpana*.—*Pereira, Materia Medica*, p. 1554.

Elected. *Elect.* Elected.

1. Chosen; taken by preference from among others.

You have here, lady,
And of your choice, these reverend fathers,
Yea, the elect of the land.

Shakespeare, Henry VIII. II. 4.

2. Chosen to, as opposed to actually invested with, an office: (*postpositive*).

The bishop elect takes the oath of supremacy, canonical obedience, and against simony; and then the dean of the arches reads and subscribes the sentences.—*Aslife, Parergon Juris Canonici*.

3. In *Theology*. Chosen as a follower of Christ, or member of the kingdom of heaven.

A vicious liver, believing that Christ died for none but the elect, shall have attempts made upon him to reform and amend his life.—*Blount*.
None I have chosen of peculiar grace,
Elect above the rest; no in my will.

Milton, Paradise Lost, III. 183.

Elect. v. a. [*Lat. electus*, pass. part. of *eligo* = choose, pick out, select.]

1. Choose for any office or use; take in preference to others.

Henry his son is chosen king, though young;
And Lewis of France, elected first, beguile'd. *Daniel*.
Such as thou hast solemnly elect'd,
With gifts and graces eminently adorn'd,
To some great work. *Milton, Samson Agonistes*, 674.
They have been, by the means that they elect'd,
Carried beyond the end that they designed.—*Bayle, Essay on Criticism*, (1781).

I would not have Christians neglect the fountain for the stream, and unwisely, as well as unthankfully, elect to read God's word rather in any book than his own.—*Isid.*, p. 145. (1781).

This prince, in gratitude to the people, by whose consent he was chosen, elected a hundred senators out of the commons.—*Swift*.

2. In *Theology*. Select as an object of eternal mercy.

Nor can they think, with the Sabæans, that redemption is only God's passing by those whom he does not elect. *Bishop Burnet, Exposition of the Thirty-nine Articles of the Church of England*, art. 17.

Electant. s. One who has the power of electing.

You cannot go on further to entitle him a free electant too.—*Search, On Freewill, Foreknowledge*, &c. p. 53: 1763.

[Todd, after remarking that this is a word not likely to be used, adds that the same author has used *electancy*.]

Electio. s. Choice.

1. Act of choosing or selecting one or more from a greater number for any use or office; choice.

If the election of the minister should be committed to every several parish, do you think that they would choose the best?—*Archbishop Whitgift*.

I was sorry to hear with what partiality, and popular heat, elections were carried in many places.—*Eikon Basilike*.

Thine, not thy election,
But natural necessity, begot.

Milton, Paradise Lost, I. 764.

As clarity is, nothing can more increase the lustre and beauty than a prudent election of objects, and a fit application of it to them.—*Bishop Sprat*.

Since the late dissolution of the club, many persons put up for the next election.—*Addison, Spectator*.

2. Power of choice.

For what is man without a moving mind,
Which hath a judging wit, and choosing will?

Now, if God's power should her election bind,
Her motions then would cease, and stand all still.
Sir J. Davies, Immortality of the Soul.

3. Discernment; distinction; discrimination.

The discovering of these colours cannot be done but out of a very universal knowledge of things; which no clearest men's judgement and election, as it is the less apt to slide into error.—*Bacon*.

In favour, to use men with much difference and election is good: for it maketh those preferred more thankful, and the rest more obnoxious.—*Id.*

4. In *Theology*. Predetermination of God by which some were selected for eternal life.

The elect about absolute election to eternal life, 804

some enthusiasts entertaining, have been made remote in the practice of virtue.—*Bishop Atterbury*.

Electioneering. s. (often used adjectivally.)

Practice of soliciting votes at the election of a member for parliament; any business connected with such election. Noted by Johnson as a low word.

Forewell distress, and gloomy cares!

A morbid theme my muse prepares:

For lo! to save us, on a sudden,

In shape of porter, beef, and pudding,

Though late, electioneering comes!

Warlop, Newman's Verba, 1703.

While Montague suffered the mortification of finding that his empire over the city was less absolute than he had imagined, Wharton, notwithstanding his acknowledged preeminence in the art of electioneering, underwent a succession of defeats in boroughs and counties for which he had expected to name the members.—*Macaulay, History of England*, ch. xxiv.

Elective. adj.

1. Regulated or bestowed by election or choice.

I will say positively and resolutely, that it is impossible an elective monarchy should be so free and absolute as an hereditary.—*Bacon*.

The last change of their government, from elective to hereditary, has made it seem hitherto of less force, and unfit for action abroad.—*Sir W. Temple*.

If, indeed, we may place reliance on Matthew Paris, Archbishop Hubert on the occasion (the accession of John) declared in the most explicit terms that the crown was elective, giving to the blood royal no other preference than their merit might challenge.—*Hallam, View of the State of Europe during the Middle Ages*, pt. II. ch. viii.

2. Exerting the power of choice.

To talk of compelling a man to be good, is a contradiction; for where there is force, there can be no choice; whereas all moral goodness consisteth in the elective act of the understanding will.—*Grove, Cosmologia Sacra*.

3. Applied in *Chemistry* to substances incapable of choice, but which are not only able to enter into combination with one another, but have their power to do so regulated by what takes the appearance of preference.

Sulphuric acid, in like manner, separates baryta from nitric acid. Combination and decomposition occur in each of these cases; combination of sulphuric acid with ammonia, . . . of baryta with sulphuric acid. These are examples of what Bergmann calls single elective affinity—*elective*, because a substance manifests, as it were, a choice for one of two others, uniting with it by preference and to the exclusion of the other. Many of the decompositions that occur in chemistry are instances of single elective affinity. *Turner, Elements of Chemistry*, p. 131. Nevertheless, in 1775, the Swedish chemist Bergman, pursuing still further this subject of chemical affinities, and the expression of them by means of tables, returned again to the old Newtonian term; and designated the disposition of a body to combine with one rather than another of two others as *elective attraction*. And as his work on *elective attractions* had great circulation and great influence, this phrase has obtained a footing by the side of affinity, and both one and the other are now in common use among chemists.—*Whewell, History of Scientific Ideas*, II. 19.

Elective affinity denotes the order of preference, so to speak, in which the several chemical substances choose to combine; or, really, the gradation of attractive force infused by Almighty Wisdom among the different objects of nature, which determines perfect uniformity and identity in their compounds amidst infinite variety of combination.—*Live, Dictionary of Arts, Manufactures, and Mines*.

Electively. adv. In an elective manner; by choice; with preference of one to another.

How or why that should have such an influence upon the spirits, as to drive them into these unwise electively, I am not subtle enough to discern.—*Ray, Wisdom of God manifested in the Works of the Creation*.

They work not electively, or upon proposing to themselves an end of their operations.—*Grew*.

Electors. s. One who elects.

a. As the member of an ordinary English constituency.

The inhabitants of Edinburgh complained . . . that the representation of this capital city . . . with upwards of one hundred thousand inhabitants, was returned by thirty-three electors.—*T. Erskine May, Constitutional History of England*, I. 298.

b. As a prince of the old German empire, who had a vote in the choice of an em-

peror; in German *Churfurst* = choosing-prince.

c. From the new world her silver and her gold
Came, like a tempest, to confound the old;
Feeding with these the brist'd electors' hopes.
Alone she gave us emperors and popes. *Waller*.
Heidelberg, just beginning to rise again from its ruins, was again sacked, the pious citizens butchered, their wives and daughters foully outraged. The very choral of the churches were stained with blood: the pews and crucifixes were torn from the altars: the bones of the ancient electors were broken open; the corpses, stripped of their cerecloths and ornaments, were dragged about the streets.—*Macaulay, History of England*, ch. xv.

Electoral. adj. Having the dignity, rank, or estate of an elector.

Such are the subdivisions in favour of the electoral and other princes in the empire.—*Burke, Speech on Economical Reform*.

Electoralty. s. Territory of an elector. Electorate the commoner word.

Not to trouble one another, or any thing to them belonging as electoralities, principalities, subjects, towns, villages.—*Treaty in Reliquie Wottonianæ*, dat. 1620, p. 531.

Electorate. s. See preceding entry.

He has a great and powerful king for his son-in-law; and can himself command, when he pleases, the whole strength of an electorate in the empire.—*Addison, Freyhof*.

Electress. s. Same as Electress.

In the end of his [the elector of Brandenburg's] life, the electress had gained great credit.—*Bishop Burnet, History of his own Time*, 1688.

Electors. s. Rank or condition of an elector.

These princes electors, being joyous and bound into the emperor in a double consideration, as well for their electors in respect of the kingdom of Bohemia, could not otherwise do.—*Kudke, History of the Turks*, 128 A. (1781).

Electress. s. Wife of a (prince) elector.

The act of parliament settled the crown on the electress Sophia and her descendants, being protestants.—*Burke*.

Electro. adj. [*Lat. electrum*; *Gr. ἤλεκτρον* = amber, which, at an early date, was observed, when rubbed by dry silk, cloth, or the like, to have acquired the power of attracting light bodies.] Having properties identical with, or referable to, the same force as that developed by friction in amber, the class of phenomena thus reducible being those of that department of physics called electricity; belonging to, constituting, or produced by, Electricity.

By electroic bodies do I conceive not such only as take up light bodies, in which number the ancients only placed jet and amber; but such as, conveniently placed, attract all bodies palpable.—*Sir T. Browne, Vulgar Errors*.

If a piece of white paper, or a white cloth, or the end of one's finger, be held at about a quarter of an inch from the glass, the electric vapour, excited by friction, will, by drawing against the white paper, cloth, or finger, be put into such an agitation as to emit light.—*Sir I. Newton, Opticks*.

(For modern examples see the entries connected with this term in general.)

Electro. s. See extract.

The non-conductors readily exhibiting their electricity by friction, are often called *electrics*, in opposition to the metals and other good conductors which are called *non-electrics*. The *electrics*, from their power of preventing the passage or transfer and escape of electricity, are also sometimes called *insulators*.—*Brande, Manual of Chemistry*, p. 150.

Electrical. adj. Same as *Electric*. In the second extract both terms are found in the same page.

If that attraction were not rather *electrical* than magnetic, it was wonderful what delicious delivery concerning a glass, wherein the mystery of lodestone was prepared, which retained an attractive quality.—*Sir T. Browne, Vulgar Errors*.

An electric current appears to have a magnetic action in a direction cutting its own at right angles: . . . this, when conducting an electrical current, is, to all intents and purposes, a magnet.—*Grove, The Correlation of Physical Forces*.

The form in -ic (*electric*), notwithstanding the frequency of the adverb in -ally, is likely to prevail. Over and above the analogies of *magnetic* and *galvanic*, which are far commoner than *magnetical* and *galvanical*, the familiar term *electric* (no one

says *electrical*) telegraph favours the shorter and more correct form.

Electrically. *adv.* In an electric or electrical manner.

If in the terse form of popular revolutions public virtue shall circulate its principles, the instruction the spirit will be electrically felt by every man.—*Cartwright, State of the Nation*, p. 100.

It is much as electrified bodies are found to present themselves in two opposite or distinct states, it has been assumed that the electric fluid exists in all forms of matter;... that under ordinary circumstances it is in a state of equilibrium or quiescence; and that when this state is disturbed, so as to occasion either its redundancy or deficiency, the bodies then become electrically excited; upon this view of the cause of electricity, which originated with Franklin, the opposite states have been termed positive and negative.—*Brande, Manual of Chemistry*, p. 145.

Electrician. *s.* Investigator of the phenomena of electricity; manipulator of electric instruments.

I cannot enter into this particular subject without first settling a dispute amongst electricians.—*Wilson, in Philosophical Transactions*, li. 306: 1750.

These contain more grand... views... than any found in the works of modern electricians.—*Whewell, History of Scientific Ideas*, li. v. ch. i. § 4.

Electricity. *s.* Department in physics which deals with electric phenomena.

The mechanical theory of electricity invented by Dr. Franklin is believed by some philosophers and as well to explain the various phenomena of electricity, as may be accomplished by an hypothesis of the existence of two electric fluids diffused together, and strongly attracting each other; one of them to be called vitreous, and the other resinous, electricity. The latter opinion is now inclined to espouse.—*Darwin, Zootology*, p. 310.

The science of electricity is of modern origin. The knowledge of the ancients was confined to the fact that amber and lycurium (supposed to be tourmaline) acquired the property of attracting light bodies... Gilbert, of Colchester, detected the same property in a variety of other substances, and thereby laid the foundation of the science of electricity... Symmer added the important fact that friction develops both kinds of electricity at the same time, an observation which led to the theory of the two electric fluids as now understood. These discoveries, added to the confirmation of Franklin's opinion as to the identity of the cause of lightning and electricity, drew the attention of scientists to it upon the new study, and soon acquired for it a high rank among the sciences.—*Turner, Elements of Chemistry*, p. 80.

Electrification. *s.* Act of electrifying.

Painting at Bath is to be the next step, and in case of necessity, even electrification is to be tried.—*Lord Chesterfield, Miscellaneous*, li. 123: col. Maty, letter dated in 1752.

Electrified. *part. adj.* Rendered electric.

(For example extractum electricum.)

Electrify. *v. a.*

1. Render electric; communicate electricity.

The explosion of a cannon in St. James's park, is ascribed to *electrify* the glass of the windows of the Treasury.—*Steyn, Hales, Considerations on the Causes of Earthquakes*, p. 22: 1750.

2. Use metaphorically (the application running through most of its congeners). Shock.

If the sovereign were now to immure a subject in defiance of the writ of *habeas corpus*, or to put a conspirator to the torture, the whole nation would be instantly *electrified* by the news. In the middle ages the state of society was widely different. Rarely and with great difficulty did the wrongs of individuals come to the knowledge of the public.—*Macleay, History of England*, ch. i.

Electrization. *s.* Act of becoming, or of being rendered, electric.

When a substance, such as sulphuret of antimony, is electrified, at the instant of electrification, it becomes magnetic in directions at right angles to lines of electric force; at the same time it becomes heated to an extent greater or less according to the intensity of the electric force.—*Grove, The Correlation of Physical Forces*.

Electrize. *v. a.* Endue with electricity; invest with electric force.

An experiment which I published in 1843, tends, I think, to illustrate this, and in some degree to show the character of the motion impressed upon the molecules of a magnetic metal at the period of magnetization. A tube filled with the liquid in which the magnetic oxide of iron had been prepared, and terminated at each end by plates of glass, was surrounded by a coil of coated wire. To a spectator looking through this tube, a flash of light was perceptible whenever the coil was *electrized*, and the light was transmitted when the electrical current

ceased, showing a symmetrical arrangement of the minute particles of magnetic oxide while under the magnetic influence... To many, however, of the cases we have been considering, the term correlation may be applied in a more strict accordance with its original sense; thus, with regard to the forces of electricity and magnetism in a dynamic state, we cannot *electrize* a substance without magnetizing it, we cannot magnetize it without *electrifying* it. Each molecule, the instant it is affected by one of these forces, is affected by the other; but, in transverse directions, the forces are inseparable and mutually dependent—correlative, but not identical.—*Grove, The Correlation of Physical Forces*.

In the following extract the construction is doubtful; *electrize* meaning either 'render something electric,' or 'act as an electric body.'

He [Dr. Lister, in 1805] did not doubt that several things would *electrize*.—*History of the Royal Society*, li. 305.

Electrode. *s.* [Gr. *ἤλεκτρον* way; as the *o* is short, the *e* with which the new-made word under notice ends suggests a wrong pronunciation.] Direction of an electric current. See extract.

Both Davy, Croftus, Riffault, and Chompré, ascribed electrical decomposition to the action of the poles... Faraday... showed that the polarity must be considered as residing not only in what had till then been called the poles, but at every point of the circuit. He ascribed electrochemical decomposition to internal forces, residing in the particles of the matter under decomposition, not to external forces, exerted by the poles. Hence he shortly afterwards proposed to reject the word *poles* altogether, and to employ instead the term *electrode*, meaning the doors or passages (of whatever surface formed) by which the decomposed elements pass out. What have been called the positive and negative poles he further termed the anode and cathode; and he introduced some other changes in nomenclature connected with these.—*Whewell, History of Scientific Ideas*, li. v. ch. i. § 4.

Electrolysis. *s.* [Gr. *ἄλσις* resolution in the sense of breaking up, as in *analysis*.] Analysis, or decomposition, effected by means of electricity.

The transmission of the voltaic current in liquids is viewed by Croftus as a series of chemical affinities acting in a definite direction; for instance, in the *electrolysis* of water, i.e. its decomposition when placed between the poles or electrodes of a voltaic battery, a molecule of oxygen is supposed to be displaced by the excited attraction of the neighbouring electrode; the hydrogen liberated by this displacement unites with the oxygen of the neighbouring molecule of water; this, in turn, liberates its hydrogen, and so the current continues, being nothing else than this molecular transmission of chemical affinity.—*Grove, The Correlation of Physical Forces*.

Electrolyte. *s.* Substance capable of being analyzed, or decomposed, by electricity.

This may be extended to all liquids capable of being decomposed by the electric current, thence called *electrolytes*.... What the exact nature of the transference of chemical power across an *electrolyte* is, we at present know not, nor can we form any more definite idea of it than that given by the theory of Croftus.—*Grove, The Correlation of Physical Forces*.

Electrolytic. *adv.* Consisting in electrolysis.

When sulphur is obtained by primary *electrolytic* action... it is evolved at the... positive pole.—*Brande, Manual of Chemistry*, p. 221.

Electrometer. *s.* [Gr. *μέτρον* measure.] Instrument for measuring the intensity of an electric current.

To commence, then, with electricity as an initiating force, we set motion directly produced by it in various forms; for instance, in the attraction and repulsion of bodies, evidenced by *static electroscopes*, such as that of Coulter's, where large masses are acted on.—*Grove, The Correlation of Physical Forces*.

Lastly, motion may be again regarded by the forces which have emanated from motion; thus, the divergence of the electrometer, the revolution of the electrical wheel, the deflection of the magnetic needle, are, when resulting from frictional electricity, palpable movements reproduced by the intermediate modes of force, which have themselves been originated by motion. *Ibid.*

Electrophorus. *s.* [Gr. *φύω* bear.] Instrument for accumulating, or condensing, electric (electro-galvanic) force.

The *electrophorus* is another contrivance of Volta's which acts by induced electricity. It consists essentially of two parts; one being a flat cake of resin, ... and the other a disk of brass... supplied with a

glass handle, &c.—*Turner, Elements of Chemistry*, p. 79.

Electroscope. *s.* [Gr. *σκοπεω* = see, spy, look out for, observe.] Instrument for ascertaining the existence, character, or degree (intensity) of electric force.

It is very important, in experiments in electricity, to possess easy methods of ascertaining when a substance is electrified, of ascertaining its intensity or the degree to which it is excited, and distinguishing these objects... and the instruments employed for the purpose are called *electroscopes* and *electrometers*; the latter denoting the intensity of the excitement, the former merely indicating excitement, and the electrical state by which it is produced. The term *electrometer*, however, is often indiscriminately applied to all such instruments, since the methods of ascertaining the kind of excitement give, at the same time, some idea of its intensity.—*Turner, Elements of Chemistry*, p. 80.

Electroscopes and *electrometers* are instruments by which changes in the electrical states of bodies are rendered evident, and their intensities measured.—*Brande, Manual of Chemistry*, p. 121.

If two such discs in close proximity be connected with a delicate *electroscope*, and then suddenly separated, the *electroscope* is affected, showing that the reciprocal radiation from surface to surface, has produced electrical force.—*Grove, The Correlation of Physical Forces*.

Electroscopic. *adj.* Relating to the electroscope.

Several simple *electroscopic* methods have already been indicated.—*Turner, Elements of Chemistry*, p. 80.

Electrotype. *s.* (often used adjectively.) Stamp obtained by the deposition of a film of metal upon a relief by electro-galvanism.

The metallic precipitations... as deposited upon the negative electrode, have been resorted to for the purpose of taking impressions or copies of seals, medals, copper-plates, &c., forming what has been termed *electrotypes*; and a new branch of art has thus arisen, which has been termed *electro-metallurgy*.... *Electrotype* processes have now, to a great extent, superseded the old methods of plating.—*Brande, Manual of Chemistry*, pp. 212-20.

Jacobi's galvanoplasty, Smee's, and also Shaw's, *electro-metallurgy*, Walker's *electrotype* manipulation... present us the different names under which the art is known; and from whence it is gathered that metals may become, as it were, plastic under the agency of galvanic electricity, and may be worked and modelled into form.—*For, Dictionary of Arts, Manufactures, and Mines, Electro-metallurgy*, (Hunt's edition.)

Electrum. *s.* [see Electric.] Amber was but one of the meanings of this word. It also meant an alloy of gold and silver.

The ancient *electrum* had in it a fifth of silver to the gold, and made a compound metal, as fit for most cases as gold, and more resplendent, and more qualified in some other properties; but then that was easily separated.—*Harvey, Natural and Experimental History*, li. 728. (Oud MS.)

Electuary. *s.* [Johnson, after giving the Low Latin *electuarium* as a derivation, by adding that it 'is now written *electuary*,' suggests the notion that he approved of the older term. Todd, after stating that the former word is found in Huloet, and that the old French has *electuaire*, adds that 'electuary has since been offered in the History of Medical Transactions, but has not been followed.' That *electuary* is the commoner word is beyond doubt. It is, however, in a fair way of being itself superseded by Confection.] Medicine made up, with sugar, to the consistence of honey.

Electuaries made up with honey or syrup, when the consistence is too thin, ferment; and when too thick, cloy. By both which the ingredients will be altered or impaired.—*Quincy*.

We meet with divers *electuaries*, which have no ingredient, except sugar, common to any two of them.—*Boyle*.

The London Pharmacopoeia refers those articles which were formerly called *electuaries* to confections.—*Hager, Medical Dictionary*, in voce. (See also extract under Confection, 3.)

Eleemosynary. *adj.* See Alms.

1. Given in charity, or as alms; constituting, consisting in, or having the nature of, alms.

He had done several *eleemosynary* cures amongst

them, for they are generally very poor.—*Bishop Sprat, History of the Royal Society*, p. 209.

2. Living upon alms; depending upon charity. In the accounts of Minto's journey, near Coventry, in the year 1430, it appears that the *elemosynary* boys, or choristers, of that monastery, acted a play.—*T. Warton, History of English Poetry*, ii. 364.

Elemosynary. s. One who subsists upon alms or charity; object of charity. *Rare.* Living as an *elemosynary* upon a perpetual contribution from all and every part of the creation.—*South, Sermons*, iii. s. 1.

It is little better than an absurdity, that the cause should be an *elemosynary* for its subsistence to its effects, as a nature posterior to and dependent on itself.—*Glanville, Scripps Scientific*.

Elegance. s. Beauty characterized by grace, propriety, delicacy, and refinement.

On the last quality of style to be noticed—*elegance* or beauty—it is the less necessary to enlarge, both because the most appropriate and characteristic excellence of the class of compositions here treated of, is that energy of which I have been speaking; and also, because many of the rules laid down under that head, are equally applicable with a view to *elegance*. The same choice, number, and arrangement of words, will, for the most part, conduce both to energy, and to beauty. The two qualities, however, are by no means indistinguishable; a metaphor, for instance, may be apt, and striking, and consequently conducive to energy of expression, even though the new image, introduced by it, have no intrinsic beauty, or be even unpleasant; in which case, it would be at variance with *elegance*, or at least would not conduce to it. *Elegance* requires that all homely and coarse words and phrases should be avoided, even at the expense of circumlocution; though they may be the most apt and forcible that language can supply. And *elegance* implies a smooth and easy flow of words in respect of the sound of the sentences; though a more harsh and abrupt mode of expression may often be, at least, equally energetic. Accordingly, many are generally acknowledged to be forcible writers, to whom no one would give the credit of *elegance*; and many others, who are allowed to be elegant, are yet by no means reckoned among the vigorous and energetic. When the two excellencies of style are at variance, the general rule to be observed by the author is to prefer the energetic to the elegant. Sometimes, indeed, a plain, or even a somewhat homely expression, may have even a more energetic effect, from that very circumstance, than one of more studied refinement; since it may convey the idea of the speaker's being thoroughly in earnest, and anxious to convey his sentiments, where he uses an expression that can have no other recommendation; whereas a strikingly elegant expression may sometimes convey a suspicion that it was introduced for the sake of the *elegance*; which will greatly diminish the force of what is said. The appearance of a too uniform *elegance* or stateliness of style, is apt to cloy; like a piece of music without any discord.—*Whately, Elements of Rhetoric*, pt. iii. ch. iii. § 1, 2.

Elegance. s.
1. Same as Elegance.
St. Augustine, out of a kind of *elegance* in writing, makes some difference.—*Sir W. Raleigh, History of the World*.
These questions have more propriety, and *elegance*, understood of the old world.—*Bishop Burnet*.
2. Anything that pleases by its elegance; (in this sense it is used in the plural).
The beauty, ornament, and *elegance* of life.—*Jeremy Taylor, A Collection of Miscellaneous Sermons*, p. 83.
My compositions in gardening are altogether Phœnician, and run into the beautiful wildness of nature, without the nice *elegance* of art.—*Spectator*.
Elegant. adj. [Lat. *elegans*, -antis, whence *elegantia*; Fr. *élegant* and *élégance*.] Pleasing by the minute beauties, or by the absence of faults, especially those of grossness or coarseness; having grace, propriety, delicacy, and refinement.
Eye, now I see them art exact of taste,
And *elegant*, of sapience no small part;
Since to each man's saviour we apply,
And palate call judicious.
Milton, Paradise Lost, ix. 1019.
Trifles themselves are *elegant* in him.
There might'st thou find some *elegant* retreat,
Some hilding senator's deserted seat.
Johnson, London,
Polite with candour, *elegant* with ease.
Pope.

Elegantly. adv. In an elegant manner.
They describe her in part finely and *elegantly*, and in part gravely and sententiously.—*Bacon*.
Now read with them those oracular arts which enable men to discourse and write perpetually, *elegantly*, and according to the latest style of lofty, man, & lowly.—*Milton, Tractate on Education*.

Elegiac. adj.

1. Having the character of the metre consisting of hexameters and pentameters alternately, as written by Mimnermus and other early Greek poets, and applied to poetry of a tender, plaintive, and even melancholy character: (as opposed to the heroic metre, consisting solely of hexameters, of Homer and the epic poets). In English, the stanza of four lines, each line containing five accents and ten syllables, with alternate rhymes, is usually called elegiac; though, as suggested by the extract from Johnson, with doubtful propriety. Waller's Panegyric and Dryden's Annus Mirabilis are by no means elegiac; still less Davenant's romantic epic of Gondibert and Sir T. Davies's Immortality of the Soul. The form in which the lines are printed, which is that of the elegiacs of the classical writers, has, perhaps, as much to do with it as the subject.]

Another thing yet more considerable is conduct, and design, in whatever kind of poetry, whether the epic, the dramatic, the lyric, the elegiac.—*Philips, Theatrum Pœtæarum*, pref.

That third manner the Latin poets was Milton's favourite, appears not only from his *epic* but his hexametric poetry.—*T. Warton, Milton's smaller Poems*, pref.

Why Hammond, or other writers, have thought the quatrain of ten syllables *elegiac*, it is difficult to tell.—*Johnson, Lives of the Poets, Hammond*.
Elegy speaks her own proper native language, the unaffected plaintive language of the tender passions; the true *elegiac* dignity and simplicity are preserved and united, the ease without pride, the other without meanness.—*Lord Chesterfield, Preface to Hammond's Elegies*.

2. Mourning; sorrowful.
Let *elegiac* lay the woe relate,
Soft as the breath of distant flutes.
Gay, Triclin.

3. In *Prosody*, applied to Latin or Greek metres. Alternating in hexameters and pentameters.

I am . . . inclined to think that Jonson's *Palmas*, all of which are in *elegiac* metre, do not fall short of those of Buchanan either in elegance of style or correctness of Latin.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

Elegiac. s. Elegiac verse.
His Latin *elegiacs* are pure.—*T. Warton, History of English Poetry*.

Elegiac. s. Writer of elegiacs.
The great fault of these *elegiacs* is, that they are in despair for pains that give the sensible part of mankind very little pain.—*Goldsmit, Vicar of Wakefield*.

Elegiographer. s. [Gr. *επιγραφο* = write.] Writer of elegiacs. *Rare.*
Elegiographer, one who writes mournful songs.—*Cockeram*.

Elegist. s. Same as Elegiacist; (conveniently limited to a writer of elegies).

Our *elegist*, and the characterers, impute the crime of withholding no pains a legacy to the advice of the king of France.—*T. Warton, History of English Poetry*, i. 108.

Elegit. s. [Lat.] In *Law*. Writ so called, giving an alternative to the person who applies for it.

It is generally known, a judgement being obtained or acknowledged for any debt when the statute of Westm. 2. 13 Ed. I. c. 18, (one half of the debtor's land is to be delivered unto the creditor until the obligation is satisfied, under a writ called *Elegit*, and this writ has been ever since the ordinary assurance of the land, and the great foundation of general credit in the nation.—*Burke, Tracts on the Perverse Laws*.

Elegy. s.

1. Poem of an elegiac character.
He laments odes upon hawthorns, and elegies upon hawthorn, all forsooth defying the name of *Romance*.—*Shakespeare, As you like it*, iii. 2.
So on Maudslaw's banks, when death is nigh,
The mournful swan sings her own elegy.
Dryden.
A versification is *elegiac*, which, by indulging a free and unobscured expression, may admit of that simplicity, which *elegy* requires.—*Shenstone, Preface to his Elegies*.

Johnson has selected the *elegy* on Crutcher as the finest of Cowley's works.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

2. Latin poem in alternate hexameters and pentameters.

Holland stood at the head of Europe in this line of poetry [Latin versification]. Grotius has had the reputation of writing with spirit, elegance, and imagination. But he is excelled by Helmsius, whose *elegies* still more than his hexameters may be ranked high in modern Latin.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

Element. s. [Lat. *elementum*.]

1. First or constituent principle of anything.

If nature should interrupt her course, those principal and mother elements of the world, wherewith all things in this lower world are made, should lose the qualities which now they have.—*Hooker, Ecclesiastical Polity*.

A man may rationally retain doubts concerning the number of those ingredients of bodies, which some call *elements*, and others principles.—*Bacon*.
The ancients considered fire, air, water, and earth, as simple substances, essential to the constitution of all terrestrial beings. This hypothesis, evidently incompatible with modern chemical discovery, may be supposed to correspond, however, to the four states in which matter seems to exist; namely, 1. the uncompressible powers or fluids—caloric, light, electricity; 2. ponderable gases, or elastic fluids; 3. liquids; 4. solids. The three elements of the alchemists—salt, earth, mercury—were, in their sense of the word, mere phantasms. In modern science the term *element* signifies merely a substance which has not yet been resolved by analysis into any simpler form of matter, and it is therefore synonymous with undecomposed.—*Cree, Dictionary of Arts, Manufactures, and Mines*.

2. The four elements usually so called are Earth, Fire, and Air, Water, of which our world is composed: (when used alone, element commonly means the air; the pure or simple element being water, as opposed to fermented or distilled liquors).

The king is but a man: the violet smells to him as it doth to me; and the element shows to him as it doth to me.—*Shakespeare, Henry V.* iv. 1.

My dearest sister, fare thee well;
The elements be kind to thee.

Id., Antony and Cleopatra, iii. 2.

The king
Contending with the fearful elements,
Hills the wind blow the earth into the sea,
Or swell the curled waters. *Id., King Lear*, iii. 1.
The heavens and the earth will pass away,
And the elements melt with fervent heat. *2 Peter*, iii. 10.
Here be four of you were able to make a good world; for you are as differing as the four elements.—*Bacon*.

He from his flaming ship his children sent,
To perish in a milder element. *Waller*.

We are informed by Cassian, that the common measure (of their food) in twenty-four hours, was about twelve ounces, with more element for drink. He shows the great benefit of a low diet, living altogether on vegetable food and pure element. *Chrysostom, Essay on Health and long Life*, p. 30-32. (Ori. MS.)

3. Proper habitation or sphere of anything: (as water of fish; whence, 'out of one's element,' applied to persons dealing with unfamiliar matters).

We are simple men; we do not know she works by charms, by spells, and such dainties as is beyond our element.—*Shakespeare, Merry Wives of Windsor*, iv. 2.

Our torments may, in length of time,
Leave out our element. *Milton, Paradise Lost*, ii. 571.

4. Ingredient; constituent part.

Who wet the body and the limbs
Of this great sport together, as you guess?
One more that promises no element
In such a business. *Shakespeare, Henry VIII.* i. 1.

5. First rudiments of literature or science.

With religion it breathes as with *offspring* sciences; the first delivery of the elements thereof must, for like consideration, be framed according to the weak and slender capacity of young beginners.—*Hooker, Ecclesiastical Polity*.

Every parish should keep a petty schoolmaster, which should bring up children in the first elements of letters.—*Spenser, View of the State of Ireland*.

We, when we were children, were in bondage under the elements of the world.—*Galatians*, iv. 3.

There is nothing more pernicious to a youth, in the elements of painting, than an ignorant master.—*Dryden*.

Crushed was Napoleon by the northern Thor,
Who knock'd his army down with his hammer,
Stopp'd by the elements, like a whistler, or
A blundering novice in his new French grammar.

When Brummell was obliged to retire to France, he knew no French, and having obtained a grammar for the purpose of study, our friend George Davies was asked what progress Brummell had

made in French; he responded, that Brummell had been stopped, like Buonaparte in Russia, by the *elements*. I have put this pun into Boppo, which is 'a fair exchange and no robbery'; for Europe made his fortune at several dinners (as he owned himself) by repeating occasionally, as his own, some of the buffoneries with which I had encountered him in the morning.—*Byron, Diary*, 1821.

Another form of Ignoratio Elenchi, which is also rather the more servicable on the side of the respondent, is, to prove or disprove some part of that which is required, and dwell on that, suppressing all the rest. Thus, if a university is charged with cultivating only the mere *elements* of mathematics, and in reply a list of the books studied there is produced, should even any one of those books be not elementary, the charge is in fairness refuted; but the sophist may then earnestly contend that some of those books are elementary; and thus keep out of sight the real question, viz. whether they are all so.—*Whately, Logic*.

[Alphabet] The name given to the series of letters used in different countries at different times. The term is borrowed from the Greek language, in which Alpha, Beta, are the first two letters; or if we go a step farther back, we should derive the word from the Hebrew, which gives to the corresponding letters the names Alpha, Beth. Thus the formation of the word is precisely analogous to that of our familiar expression, the A, B, C; and some writers have found a similar origin for the Latin name given to the letters, viz. *elementa*, which, it must be allowed, bears an extraordinary similarity in sound to the three liquids, l, m, n; but to make this derivation satisfactory, it should be proved that these letters were at one time the leaders of the alphabet, for otherwise it would be difficult to account for the selection of a name from them in preference to the rest.—*Key, The Alphabet*.

6. In *Theology*. Bread and wine of the Eucharist.

Element. *v. a.*

1. Compound of elements.

Fond creature! thou art *elemented* and organed for other apprehensions, for a lower commerce of perception: such immediate displays of divinity infinitely transcend the analogy of thy order, and the immediate glory of such a revelation would but absorb thy soul.—*Meunier, Discourses*, p. 82; 1681.

2. Constitute; make as a first principle.

Dull sublimity lover's love,
Whose soul is sense, cannot admit
Absence, because it hath remembrance
Those things which *element* it.

Jonas, Poems, p. 41.

His very soul was *elemented* of nothing but sadness.—*L. Walton, Life of Jonas*.

Elemental. *adj.*

1. Produced by some of the four elements.

God made
The firmament, expanse of liquid, pure,
Transparent, *elemental* air.

Milton, Paradise Lost, vii. 253.

If dusky spots are strewn on his liver,
And streak'd with red, a troubled colour show;
That sullen mixture shall at once declare
Winds, rain, and storms, and *elemental* war.

Dryden, Virgil's Georgics.

The heavens, and the ample or *elemental* bodies,
As the earth, the water, and the air.—*Bishop Pearson, Exposition of the Creed*, art. 1.
Soft yielding minds to water slide away,
And slip, with nymphs, their *elemental* ties.

Pope.

2. Arising from first principles.

Leeches are by some accounted poison not properly, that is, by temperamental contrariety, occult form, or so much as *elemental* repugnancy; but inwardly taken, they fasten upon the veins, and occasion an effusion of blood.—*Sir T. Browne*.

3. Rude; elementary.

The druids are said to be very expert in astronomy, in geography, and in all parts of mathematical knowledge. And authors speak, in a very exaggerated strain, of their excellence in these, and in many other sciences. Some *elemental* knowledge, I suppose, they had; but I can scarcely be persuaded that their learning was either deep or extensive.—*Burke, Abolishment of English History*, i. 2.

Elementality. *s.* Composition; combination of ingredients.

By this I hope the *elementality* (that is, the universality) of detraction, or disparagement, (or what else you will call this 'and dire'), is out of dispute.—*Whitlock, Observations on the present Manners of the English*, p. 460; 1654.

Elementally. *adv.* In an elemental manner; after the manner of an element.

Those words taken circumscriptively, without regard to any precedent law of Moses, are as much against plain equity and the mercy of religion, as those words of 'Take out this is my body,' *elementally* understood, are against nature and sense.—*Christian Religion's Appeal to the Bar of Reason*, ch. xv. (Ord M8.)

Elementarity. *s.* Simplicity of nature; absence of composition; being uncompounded.

A very large class of creatures in the earth, far above the condition of *elementarity*.—*Sir T. Browne, Vulgar Errors*.

Elementary. *adj.*

1. Uncompounded; having only one principle or constituent part.

All rain water contains in it a copious sediment of terrestrial matter, and is not a simple *elementary* water.—*Ray*.

The *elementary* salts of animals are not the same as they appear by distillation.—*Arbuthnot, On the Nature and Choice of Aliments*.

2. Initial; rude.

Your courier *elementary* is one but newly entered, or as it were in the alphabet.—*R. Jonson, Cynthia's Revels*.

It is probable, that before the time of Aristotle there were *elementary* treatises of geometry, which are now lost.—*Reid, Inquiry into the human Mind*.

3. Of, or belonging to, the elements.

The harmony of heaven and the elements was put out of tune, in the *elementary* part of the world, by the sin of man.—*Harmer, Translation of Job's Sermons*, p. 237; 1587.

Some luminous and fiery impresses in the *elementary* region.—*J. Spencer, Discourse concerning Prædilection*, p. 33.

Elemented. *part. adj.* Consisting of elements.

Whether any one such body be met with, in those said to be *elemented* bodies, I now question.—*Boyle*.

Elemi. *s.* See extracts

This drug is improperly called *gum elemi*, being a resin. The genuine *elemi* is brought from Ethiopia in English masses, or in cylinders of a yellowish colour. It is very rare in Europe, and supposed to be produced by a tree of the olive kind. The spurious or American *elemi*, almost the only kind known, is of a whitish colour, with a greater or less greenish or yellowish tinge. It proceeds from a tall tree, which the Brazilian women, and collect the resin.—*Sir J. Hill, Materia Medica*.

Elemi is a resin which exudes from herbaceous made during dry weather through the bark of the Amyris clemifera, a tree which grows in South America and Brazil. It comes to us in yellow, tender, transparent lumps, which readily soften by the heat of the hand. They have a strong aromatic odour, a hot spicy taste, and contain 12½ per cent. of etheriacs.

The crystalline resin of *elemi* has been called *elemine*. It is used in making lacquer, to give toughness to the varnish.—*Croë, Dictionary of Arts, Manufactures, and Mines*.

Elemich. *s.* [Gr. *ελεγχος*=proof.] Argument; sophism. *Obsolete*.

The first debision Satan laid upon Eve, and his whole temptation might be the same *elemich* continued, as when he said, 'You shall not die; that was, in his equivocation, yet shall not incur present death.'—*Sir T. Browne, Vulgar Errors*.

Of these sophisms and *elemichs* of merchandize I skill wd.—*Milton, A Recognition*.

All your *elemichs* in byre come within the compass of jugglery. *Selden, Table-Talk*.
Discover the fallacies of our common adversary, that old sophister, who puts the most abusive *elemichs* on us.—*Dr. H. More, Twenty of Christian Piety*.

Elemichise. *v. n.* Dispute. *Obsolete*.

Hear him *elemichise*. Bless us, what's that?—*Or syllogize, elemichise*.—*R. Jonson, Sixes*.

Elemichie. *adj.* Serving to confute.

It may be proper in this place to remark, that 'indirect reasoning' is somewhat confounded with 'refutation,' or supposed to be peculiarly connected with it; which is not the case; either direct or indirect reasoning being employed indifferently for refutation, as well as for any other purpose. The application of the term *elemichie* (from *ελεγχω*, to refute or disprove) to indirect arguments, has probably contributed to this confusion.—*Whately, Elements of Rhetoric*, pt. I. ch. iii. § 7.

Elemichical. *adj.* Same as Elemenchie.

Doctrinal application . . . is of two kinds; didactical, *elemichical*. . . *Elemichical*, *ελεγχω*, in some contrived point, which is usually called an use of confutation, for the refuting of such erroneous positions as do subvert the truth.—*Bishop Wilkins, Ecclesiastes, or Gift of Preaching*, § 2.

Elephant. *s.* [Lat. *elephas*, *antis*.]

1. Large quadruped so called.

The elephant hath joints, but not for courtesy; His legs are for necessity, not decorum.—*Shakespeare, Troilus and Cressida*, ii. 2.

2. Ivory; teeth of elephants. *Obsolete*.

High o'er the gate, in elephant and gold,
The crowd shall Caesar's Italian war behold.
Dryden, Virgil's Georgics.

Elephantiasis. *s.* Species of leprosy, so called

ed from covering the skin with incrustations like those on the hide of an elephant.

It differed in the temper of his body, being inclined to the leprosy called *elephantiasis*, unknown to the patient, but not infectious to the company.—*Feller, History of the Holy War*, p. 94.

Although this disease was first described by Rhazes, it has been very generally confounded in modern times with the *elephantiasis* of the Greeks, from which it is quite distinct. Its resemblance even to the latter affection, does not sufficiently justify M. Alibert in arranging it under the same genus. It is seated most frequently in the lower extremities, but is also met with in the upper extremities, in the scrotum, the vulva, the breasts, and more rarely in other parts of the body. The countries in which it is most common are—Barbadoes, and all the West India islands; various parts of South America; Egypt, and several parts of inter-tropical Africa; Ceylon, the neighbourhood of Cochin, on the coast of Malabar, and other parts of Hindostan; Japan, and some districts of China; the Polyanesian Isles; and the provinces of Asturias and Castile, in Spain. Cases, however, occasionally occur in all the countries of Europe. According to Dr. Graves and Dr. Keenan, a variety of it is common in Ireland. I have seen one case in the Infirmary at Edinburgh; five in London, one of them very recently under the care of Mr. Morley, and several, many years ago, in Africa, and on the continent of Europe. *Copland, Dictionary of Practical Medicine*, in voce.

Elephantine. *adj.* Pertaining or relating to, or having the character of, an elephant: (this may consist in the size, awkwardness, coarseness, or hardness of skin and consequent insensibility of the object compared, the figurative use being frequent).

It is hard for the most *elephantine* sinner (one of the greatest magnitude) so to trade these waters, and not therein to discover the prodigies of his own deformities.—*Bishop Stillingfleet, Origines Sacre*. (Ord M8.)

But what insolent familiar durst have united
Thoumas Coventry?—whose person was a quadrate,
His step massy and *elephantine*, his face square as
the lion's, his gait peremptory and path-keeping, indelible
from his way as a moving column, the
warrior of his inferiors, the law-bearer of equals
and superiors, who used a solitude of children
wherever he came, for they felt his insufferable
presence, as they would have shunned an Elisha war.—*Lamb, Essays of Elia, The Old Beuchers of the Inner Temple*.

Elevate. *v. a.* [Lat. *elevatus*, pass. part. of *elevo*; *elevo*, *antis*.]

1. Raise up aloft.

O, the noble countess, that 'twixt joy and sorrow,
was caught in Pandion! She had one eye declined
for the loss of her husband; another which said
the oracle was fulfilled.—*Shakespeare, Winter's Tale*, v. 2.

This subterranean lent or flow, which *elevates* the water out of the abyss.—*Woodward*.

2. Exalt; dignify.

A gentleman of the popular faction had been long declaiming against any kind of honours that tended to *elevate* a body of people into a distinct species from the rest of the nation.—*Macaulay*.

3. Raise with great conceptions.

In all that great extent, wherein the mind wanders, in those remote speculations it may seem to be *elevated* with, it stirs not beyond sense or reflection.—*Lamb*.

Now rising fortune *elevates* his mind,
He shines unclouded, and adorns mankind.

Savage.

4. Elate with virtuous pride.

To mischievous swift, huge *element*, and joy
Brightens his crest. *Milton, Paradise Lost*, ix. 633.

5. Lessen by detraction.

When the judgements of learned men are allowed against you, what do they but either *elevate* their credit, or oppress unto them the judgements of others as learned?—*Hooker, Ecclesiastical Polity*.

Elevate. *adj.* Elevated.

On each side an imperial city stood,
With towers and temples proudly *elevate*
On seven small hills.

Milton, Paradise Regained, iv. 34.

Elevated. *part. adj.* Raised; lifted aloft; exalted: (applied to thought, expressions, style, and general character).

A grandeur, a simplicity, a breadth of manner, an imagination at once *elevated* and restrained in the subject, reign throughout Milton's Ode on the Nativity.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

Elevatedness. *s.* Attribute suggested by Elevated; elevation: (this latter being the commoner term).

I had neither wife nor children, in whom mutu-

ally to reflect and are reflected the *clearedness* and generosity of my station.—*Godwin, St. Leon.*

Elevation.

1. Act of raising aloft.

The disruption of the strata, the *elevation* of some, and depression of others, did not fall out by chance, but were directed by a discerning principle.—*Woodward.*

2. Exaltation: dignity.

Angels, in their several degrees of *elevation* above us, may be endowed with more comprehensive faculties.—*Lodge.*

a. Of the mind.

We are therefore to love him with all possible application and *elevation* of spirit, with all the heart, soul, and mind.—*Norris.*

b. Of style.

His style was an elegant perspicuity, rich of phrase, but seldom any bold metaphors, and so far from turgid, that it rather wanted a little *elevation*.—*Sir H. Watton.*

3. Height of any heavenly body with respect to the horizon.

Some latitudes have no canicular days, as those which have more than seventy-three degrees of northern *elevation*, as Nova Zembla.—*Sir T. Browne, Vulgar Errors.*

Eleven. *pr.* [see extract and the remarks thereon.] Cardinal number so called. In English notation 11; in Roman xi.

[*Elevon*.—Anglo-Saxon, *endelfan*; Gothic, *ainlif*; eleven; *twelf*, twelve. Lithuanian, *sekolika*, eleven; *dešika*, twelve, from *dešas*, one, *deš*, two. The radical identity of the second element in the Gothic and Lithuanian forms has been generally admitted, in accordance with the analogy of the parallel roots *lip* and *lik*; in Greek, *Arctur*, *Arctur*, to leave; Gothic, *laikan*, *laikan*, *laikan*, to remain; and in Latin, *lingere*, *lictum*, to leave; Lithuanian, *likti*, to remain over. The sense required for this element is indicated in the Laplandish expressions for the same numerals, *akta lokke naka*, one upon ten, one in excess of ten, two in excess of ten, and so on. But the word for ten, might easily be left unexpressed, as it actually is in Finnish, *eri toista*, eleven, literally, one in the second [ten]. The ellipse is supplied in the expression for twelfth, *toista toista kymmentä*, the second in the second ten. The Estonian uses indifferently the elliptic or the complete expression, *näa teist*, or *näa teist kummen*, one in the second, or one in the second ten. Now Lithuanian *lyksas* denifies surplus, remainder; *lyksas*, what remains over, odd, and the latter, in combination with the ordinal first, second, &c., is used to designate the numbers immediately following ten; *pirmas*, *antras*, &c., *lyksas*, the first, second, &c., excess above ten, i.e. eleven, twelve, and so on. The radical identity of forms like these with the cardinal series, *sekolika*, *dešika*, &c., on the one hand, and on the other with the verbal forms *laikan*, *likti*, to remain over, *palikti*, to leave behind, cannot be doubted; and having thus traced the meaning of the Lithuanian termination *lyksas* to the idea of surplus expressed by the root of *lingere*, we have strong analogy for a similar explanation of the termination in Gothic *ainlif*, *ainlif*, and English *eleven*, from the root of Greek *arctur*, and English *leave*.—*Wedgwood, Dictionary of English Etymology.*

The editor holds the doctrine conveyed in the preceding extract; and, until lately, saving the recognition of the Lithuanian forms, it was the general one. Influential authorities, however, with these before them, have read the evidence differently; indeed have reversed it, holding that the *l* is neither more nor less than the *d* in *dec-em*, *dec-u*, &c., and that *sekolika* and *dešika*, instead of being exceptions to formulae *thir-teen*, *four-teen*, &c., are 3 + 10, 4 + 10, and so on, and simply 1 + 10, and 2 + 10, on the same principle as the rest.]

Eleventh. *adj.* Ordinal of Eleven.

Eleventhly. *adv.* In the eleventh place.

Elf. *s.* pl. *elves*. [A.S. *elf*. In composition, *mount-elfen*—mountain elves; *wuth-elfen* = wood elves; *sa-elfen* = water elves.] Spirit, in the mythological sense of the term, generally either undersized or mischievous, or both: (hence, as in the extracts from Dryden and Swift, the word is nearly synonymous with *devil*, and in that from Shenstone to *dwarf*. Perhaps the term is oftener applied to males than female, and to solitary rather than social

ELFI

spirits. Still, an exact definition, stating how an *elf* differed from a *fairy* on the one side, and from a *goblin* on the other, not to mention *dwarfs* and *fiends*, is impracticable.)

Through this house give glimmering light,
By the dead and drowsy fire;
Every *elf*, and fairy sprite,
Hoop as light as bird from brier.

Shakespeare, Midsummer-Night's Dream, v. 2.

Fairy elves.
Whose midnight revels by some forest side,
Or fountain, some belated peasant sees,
Or dreams he sees. *Milton, Paradise Lost, l. 781.*
Or that we magicians seen, we paint them *elves*;
And are not satires to set up ourselves. *Dryden.*
However it was civil, an angel or *elf*.
For he ne'er could have ill'd it so well of himself. *Swift.*

Though now he crawl along the ground so low,
Nor wroting how the muse should soar on high,
Wisheth, poor starv'ling *elf*, his paper-kite may fly.

Shenstone.

Shakespeare distinguishes them; 'Ye *elves* of hills,
Brooks, standing lakes, and groves, &c.' (Tempest.)
Fletcher, in the Faithful Shepherdess, distinguishes
between the *elf* and the *fairy*, though he places both
among 'the powers that haunt the grove'; as the
'goblin, wood-god, fairy, *elf*, or fiend.' The general
opinion of *elves* was, that they were a kind of diminutive
demons, called also *dwarves* or *dwarfs*. Shakespeare
calls them *demij-nips*. Hence the word
has passed into our language for *dwarfs* in general.

Todd.

Elf. *v. a.* [the ordinary derivation is from the substantive, the vulgar being said to believe that the hair of persons asleep is twisted and twined by fairies. Warburton connects this belief with the *Plica Polonica*. The verb from *elf* should end in *r*, as *half*, *hulce*, *use*, *uze*, &c. In *dwarf* (*v*), however, we have the retention of the *f* in both parts of speech.] Entangle hair in so intricate a manner that it cannot be unravelled.

My face I'll crumpe with filth,
Blanket my limbs, *elf* all my hair in knots.

Shakespeare, King Lear, ii. 3.

Elfin. *adj.* ? Belonging to fairyland.
Now when that little dream was to him brought,
Unto that *elfin* knight he bade him fly.

Where he slept soundly. *Shewer, Parrot Queen.*

Elfin. *s.* Child: (perhaps as being small and mischievous).

She was just and friend to virtuous lore,
And pass'd much time in truly virtuous deed;
And in those *elfin* ears would oft deplore
The times when truth by popish rage did bleed.

Shenstone, Schoolmistress, st. 13.

Elfish. *adj.* Relating or belonging to, connected with, or having the character of, an *elf*.

In Chaucer's Tale of the Chanon Yeman, chymistry is termed an *elfish* art, that is, taught or conducted by spirits. This is an Arabian idea.—*T. Warton, History of English Poetry, l. 100.*

[*Elfish* is entered in the previous editions as a concurrent form with *elfish*, with the remark by Johnson that the latter is the better form. Such is the case; the doctrine that the adjective in *-ish* can be derived from the plural as well as from the singular being invalidated by such formations as *dwarfish*, *selfish*, and the like; in all of which the singular ends in the sound of *f*, the plural in that of *v*. At the same time good reasons can be given for believing that the irregularity (so far as it is one), in respect to the number, is not exactly what it seems to be; it being probable that it is the plural which gives the original termination, and that it is the singular which has converted *v* into *f*. The fact of the Anglo-Saxon spelling being with *f* is not conclusive on this point; for it was probably sounded as *v*, so that, phonetically, the original singulans of *loaves*, *halves*, *calves*, *leaves*, &c., were *loav*, *hulv*, *calv*, *leav*, &c. In the Swedish this power of *f* is beyond dispute, *staf* being sounded *stav*. Moreover, in the allied languages the final consonant is *b*, *weib*

ELIG

(wife), *laub*, *halb*, *halb*, &c. Here, however, the *b* is sounded as *p*. If this view be right, viz. that the spelling in *f* by no means represents the old pronunciation, examples in *v* (*elvish*), when taken from very old authors, may represent a regular formation from a singular *elv*, whilst those in *f* from very new ones represent one equally regular from *elf*; there being, in fact, two words, or at least two forms of the same word. When one ended and the other began it is difficult to ascertain. Chaucer's *elvish* craft and *elvish* lore, applied to chemistry, was, probably, as regular as the *elfish* of the present day. With Spenser and Shakespeare, however, it is a matter of doubt how far they followed older precedents, and how far the sound coincided with the spelling. Warton quotes it as spelt with *f*.]

Here no night-ravens lodge, more black than pitch,
Nor *elvish* ghasts, nor glimly owls do flee.

Spenser, Shepherd's Calendar, June.

Thou *elvish* markt, abortive, rioting lug!

The slave of nature, and the son of bell!

Shakespeare, Richard III. l. 3.

No muse hath been so bold,
Of the latter, or the old,
Those *elvish* secrets to unfold,
Which lie from others' reading.

Drayton.

Elvelock. is similarly entered.

From the like might proceed the fears of polling
elvelocks, or comphated hairs of the head.—*Sir T. Browne, Vulgar Errors.*

Elvelock. *s.* Twisted, matted, or intricately entangled hair. See remarks under *Elfish*.

This is that very Mah,
That plots the manes of horses in the night;
And takes the *elvelocks* in foul sluttish lairs,
Which, once entangled, much misfortune bears.

Shakespeare, Romeo and Juliet, l. 4.

Elvicate. *v. a.* [? Lat. *allicio*—allure; *allicio* (though a word equally barbarous) being, probably, what is meant.] ? Entice. *Rare.*

Who went clad in woman's apparel, the better to
elvicate, countenance, act and colour their unna-
tural excreable uncleanliness, which I abhor to
think of.—*Prynne, Histriomastix, pt. l. act v. s. 6.*
(Rich.)

Elicit. *v. a.* [Lat. *elicitus*, pass. part. of *elicio* = strike out; *elicitivus*, *-onis* = striking out.] Strike out; fetch out by labour or art.

Although the same truths may be *elicited*, and ex-
plained by the contemplation of animals, yet they
are more clearly evidenced in the contemplation of
man.—*Sir M. Hale, Origination of Mankind.*

Elicit. *adj.* Brought into act; brought from possibility to real existence. *Rare.*

It is the virtue of humility and obedience, and
not the formal *elicit* act of meekness; meekness
being ordinarily annexed to these virtues.—*Hammond.*

The schools dispute whether, in morals, the ex-
ternal action superadds any thing of good or evil to
the internal *elicit* act of the will.—*South.*

Elicitate. *v. a.* Elicit; fetch out by labour or art. *Rare.*

Thus may a skillful man hid truth *elicitate*.

Dr. H. More, Song of the Soul, iii. 2. 41.

Elicitation. *s.* Act by which anything is elicited.

That *elicitation* which the schools intend, is a de-
ducting of the power of the will into act; that draw-
ing which they mention, is merely from the appeti-
bility of the object.—*Bishop Bramhall.*

Elide. *v. a.* [see *Elision*.]

1. Break in pieces; crush.

We are to cut off that whereunto they, from whom
these objections proceed, fly for defence, when the
force and strength of the argument is *elided*.—*Hooker, Ecclesiastical Polity.*

2. Cut off a syllable by *Elision*.

Mr. Wolf remarks the care with which the an-
acronyms, in antiquated words, connected the con-
sonant belonging to the *elided* syllable with that
immediately following; whereas, among us, it is by
well-informed readers often made to terminate the
former syllable.—*British Critic, Sept. 1796.*

Eligibility. *s.* Worthiness to be chosen.
Sickness hath some degrees of *eligibility*, at least
by an after-choice; because to all persons, who are
within the possibility and state of pardon, it be-
comes a great instrument of pardon for sin.—*Jeremy*

aylor, Rule and Exercises of Holy Dying, § vi. i. 11.

The business of the will is not to judge concerning the nature of things, but to choose them in consequence of the report made by the understanding, as to their eligibility or goodness. — *Fishes, Sermons.*

Eligible, adj. [Lat. *eligibilis* = fit to choose or select.]

1. Capable of being, or fit to be, chosen.

A British ministry ought to be satisfied, if, allowing to every particular man that his private education is wisest, they can persuade him that, next to his own plan, that of the government is the most eligible. — *Addison, Freeholder.*

Did they really think that going on with the war was more eligible for their country than the least abatement of those emotions? — *Swift.*

Certainty, in a deep distress, is more eligible than suspense. — *Richardson, Clarissa.*

2. Preferable.

Amin, such propensities as the following, one may often hear, sophistically or unwisely, confounded together: 'The Apostles held religious assemblies on the first day of the week, with "They transferred the Sabbath from the seventh day to the first;" A Jew, Mahometan, or Roman Catholic, is not the eligible person to hold office in a Protestant-christian country; "Such persons ought not to be legally eligible;" The Apostles established such and such a form of government in the churches they founded; "They designed this form to be binding on all Christians as an ordinance for ever." &c.' — *Whately, Elements of Logic, Of Fallacies, § 10.*

Eliminate, v. a. [Lat. *eliminus*, pass. part. of *elimino* = put beyond the threshold (limen).] Put out of doors; release from confinement; get rid of anything.

Loose me from earth's inclosure, from the sun's Contracted circle set my heart at large; Eliminate my spirit, give it room Through provinces of thought yet unexplored; Teach me by this stupendous unfolding, Creation's golden steps, to climb to it! — *Young, Night Thoughts, ix.*

By the following lines, where 'thou' applies to a snail, the meaning seems to be 'cross or pass the threshold.'

Look'd up, thou'lt head all o'er, And ne'er climb'd at thy door. — *Lovell.*

Elimination, s. Act of turning out of doors; banishing; getting rid of anything.

He [St. Peter] writes this [his first epistle] to his countrymen, the Jews; amongst whom, notwithstanding their dispersion, there were doubtless many rich owners, as there are still in many parts of the world, after all their successful eliminations. — *Bishop Hall, Romane, p. 201.*

Eliquation, s. [Lat. *eliquatio, -onis*; from root of *liquor* and *liquidus*.] See first extract. *Rare.*

[*Eliquation*,] in metallurgy, [is] a separation of the different parts of mixed bodies, by the different degrees of fire required to melt them. — *Chambers.* This is done by the process named in metallurgy 'quation.' — *Black, iii. 220. (Orel MS.)*

Elision, s. [Lat. *elido* = strike out; pass. part. *elusus*; *eliso* = striking out.]

1. In Grammar. Act of cutting off; (as, 'can't th' attempt, in which there is an elision of two syllables).

You will also to the abbreviations and *elisions*, by which consonants of most obdurate sounds are joined together, without any softening vowel to intervene. — *Swift.*

2. Division, or separation, of parts in general.

The cause given of sound, that it would be *elision* of the air, whereby, if they mean any thing, they mean a cutting or dividing, or else an attenuating of the air, is but a term of ignorance. — *Bacon, Natural and Experimental History.*

Elite, s. [Fr.] See extract; also Pick, s.

A word, of military adoption, not wanted in our language; for the flower of an army much better expresses what *elite* pretends, the selection or chosen part of it; 'the choice and flower of all the troops,' as Benham writes. Yet *elite* is old, in the Scottish terms, for one elected to a bishopric. — *Todd.*

Elizatio, s. [Lat. *elizatio, -onis* = boiling; *elirus* = boiled.] Boiling or stewing of anything.

Elizatio is the seething of meat in the stomach, by the mild natural heat, as meat is boiled in a pot; to which corruption, or putrefaction, is opposite. — *Burton, Anatomy of Melancholy, p. 21.*

Even to ourselves, and more perfect animals, water performs no substantial nutrition; serving for refrigeration, dilution of solid aliment, and its *elization* in the stomach. — *Sir T. Browne.*

Elisir, s. [Arabic.] Essence, or quintessence; liquor with which the alchemists attempted the transmutation of metals; strong tincture or spirit; cordial.

No chimney yet the *elisor* got, But gloried his peasant pot, If by the way to him befel Some odorous thing, or medicinal. — *Donne.* What wonder then, if fields and regions here Breathe forth *elisor* pure?

Johnson, Paradise Lost, iii. 607. In the soul, when the supreme faculties move regularly, the inferior passions and affections following, there arises a serenity infinitely beyond the highest quietude and *elisor* of worldly delight. — *South, Sermons.*

For when no healing art prevail'd, When cardinals and *elisor* fail'd, On your pale cheek be dropp'd the show'r, Reviv'd you like a dying flower. — *Waller.*

There was the measure of the opera, . . . and a Neapolitan physician, in whom Lord Monmouth had great confidence, and who himself believed in the *Elisir* Vitæ, made up the party. — *Diaries of the younger, Countess, ii. vii. ch. vii.*

Elisivate, v. a. Lixivate. *Rare.*

These ashes being carefully *elisivated*, afforded five scruples of white fixed salt. — *Boyle, vol. iv. p. 734. (Rich.)*

Elisivation, s. Lixivation. *Rare.*

And by examining these substances by fit and proper ways, as also the vapour, by calcination, *elisivation* if it will bear such a test, vitrification. — *Boyle, vol. iv. p. 504. (Rich.)*

Elk, s. [A.S. *ele*.] Large animal akin to the stags and reindeers so called.

The *elk* is a large and stately animal of the stag kind. The neck is short and slender; the ears nine inches in length, and four in breadth. The colour of its coat in winter is greyish, in summer it is ashy. The horns of the male *elk* are short and thick near the head, where it by degrees expands into a great breadth, with several prominences in its edges. — *Sir J. Mill.*

Elk, s. [Welsh, *elarch*; Cornish, *elarch*.] Name, perhaps provincial, of the Hoop-er, or whistling swan: (given by Yarrell in the synonymy, though not in the text; connected with, and probably the original form of, the Latin *olor*).

Ell, s. [A.S. *ella*.] Measure of length equaling forty-five inches, or a yard and a quarter.

They are said to make yearly forty thousand pieces of linen cloth, reckoning two hundred *ells* to the piece. — *Johnson.* Acquit thee bravely, play the man; Look not on pleasures as they come, but go; Defend the last virtue; life's poor span Make not an *ell* by trifling in thy way. — *G. Herbert.*

Used for any actually or comparatively long measure, as in 'Give an *ell* and they'll take an *ell*;' applied to persons who must not be given way to lest they encroach further.

Ell, v. a. Measure. *Rare.*

After that the cloth hath beene seene and approved, the seower measures do both *ell* it and make it. — *Tim's Storehouse, p. 324. (Orel MS.)*

Ellingness, s. Attribute suggested by Elling, a word entered in Todd's edition, but with no example later than Piers Plowman:

'Heavy-chere'd I yede and *ellenge* of herte.'

Ruy, too, is quoted for its use in Sussex, and Grose for its use in Kent, where it means 'solitary, lonely, melancholy, far from a neighbour.' This, he thinks, connects it with the French *eloirer* and the Latin *elungatus*. 'Hullakar defines it strange.' The Anglo-Saxon *elenge* and *elende* are also quoted as meaning 'long, tedious.' Though the exact details of its use and origin in English are uncertain, it has nothing to do with *long*, but is the German *elendig* = miserable, pitiable.

This shall be in advertise you of the great *Ellingness* that I find here since your departing. — *King Henry VIII. to Anna Bolyn, Letters pub. 1714, p. 29.*

Ellipse, s. See Ellipsis, 2.

This path . . . supplies us with further illustrations. For it is not a perfect circle or *ellipse*; which it would be were the tangential and centripetal

forces the only ones concerned. Adjacent members of the solar system . . . cause what we call perturbations; that is, slight divergences in various directions from that circle or *ellipse* which the two chief forces would produce. — *Herbert Spencer, The Direction of Motion, § 47.*

Ellipsis, s. [Gr. *ἐλλειψις*, from *ἔλλειψις* leave, fail, full short; with *ἐλλειπτικός* and *ἐλλειπτικός* as adjective and adverb.]

1. Figure of rhetoric, by which something is left out necessary to be supplied by the hearer or reader: (as, 'the thing I love,' for 'the thing which I love').

The words are delivered by way of *ellipsis*, Rom. iv. 18. — *Hammond.*

2. In Geometry. Oval figure generated from the section of a cone, by a plane cutting both sides of the cone (but not parallel to the base, which produces a circle) and meeting with the base when produced. (The plural *ellipses*, being common to this and the English form *ellipse*, makes certain combinations ambiguous. In the previous editions it is the Latin form which alone is entered. The common form now is *ellipse*.)

On the cylinder inclined, describe an *ellipse* parallel to the horizon. — *Bishop Wallian, Dealtus.*

Elliptic, adj. Having the form of an ellipse; oval.

Since the planets move in *elliptical* orbits, in one of whose foci the sun is, and by a radius from the sun describe equal areas in equal times, which no other law of a circulating fluid, but the harmonical circulation, can account for; we must find out a law for the unperceptible motion, that make make the orbits *elliptical*. — *Cheyne, Philosophical Principles.*

Elliptical, adj.

1. Having the character of an ellipse. In animals that eat their food from the ground, the pupil is oval or *elliptical*; the greatest diameter going transversely from side to side. — *Cheyne, Philosophical Principles.*

2. Having the character of a (grammatical) ellipse.

We may more rightly say, that *ellipsis* is an *elliptical* expression instead of *ellipsis*. — *Kendall, Supplement to your new edition of the New Testament, p. 174. 1863.*

Elliptically, adv. In an elliptical manner; according to the rhetorical figure.

'Looked upon as dull' [is] *elliptically* expressed to avoid the repetition of 'us.' The sentence, if drawn out at length, would be, 'looked upon as being as dull as' — *Bishop Hall, Odes, Ad. 170.*

Elm, s. Native forest and timber tree so called, of the genus *Ulmus*.

The species are, the common rough-leaved *elm*; the witch hazel, or broad-leaved *elm*, by some called the British *elm*; the smooth-leaved or with *elm*. Neither of them were originally natives of this country; but they have propagated themselves by seeds and suckers in such plenty as hardly to be rooted out; especially in hedges, where there is labour for their roots. They are very proper to plant in hedges upon the borders of fields, where they will thrive better than when planted in a wood or close plantation, and their shade will not be very injurious to whatever grows under them; for they may be trained up in form of an hedge, keeping them cut every year, to the height of forty or fifty feet; but they should not be planted too near fruit-trees; because the roots of the *elm* will intermix with the roots of other trees, and deprive them of nourishment. — *Mills.*

Used metaphorically. Support: (being used in Italy to support the vine).

Thou art an *elm*, my husband; I a vine, Whose weakness married in thy stronger state; Makes me with thy strength to communicate. — *Shakespeare, Comedy of Errors, ii. 2.*

Elmy, adj. Abounding with elm trees.

The simple spire, and *elmy* grove. — *T. Warton, Odes, xl.*

Elocution, s. [Lat. *elocutio, -onis*; from *locus* = place.] *Rare.*

1. Removal from the usual place of residence.

When the child either by general permission, or former *elocution*, shall be out of the parent's disposing. — *Bishop Hall, Cases of Conscience.*

2. Departure from usual method; ecstasy.

In all poetry (if it be good and worthy) there must be not only an imitation, and communion, but also an *elocution*, and emotion of the mind. The poet

must be extra se positus, et à mento alienatus.—*Eutherby, Athanasia, p. 30.*

Elocution. *s.* [Lat. *elocutio*, -onis; from *lucutus*, part. of *luquor* = speak.]

1. Utterance of speech; delivery; eloquence (so far as it depends upon the distinctness of enunciation and the appropriate modulation of the voice).

Whose taste, too long forborne, at first essay
Gave eloquence to the mute, and taught
The tongue not made for speech to speak thy praise.

Milton, Paradise Lost, ix. 747.

Where the author is actually reading his own composition, he will be still more likely . . . to approach, in the delivery of it, to the *elocution* of a reader; . . . on the other hand, it is possible for him, even without actually deceiving the hearers into the belief that he is speaking extempore, to approach indistinctly near to that style. The difficulty however of doing this, to one who has the writing actually before him, is considerable. . . . This (as it may be called) extemporaneous style of *elocution*, is—in any case where it is not improper—much the more impressive. . . . Little, if any, attention has been bestowed on this point by the writers on *elocution*; the distinction above pointed out between reading and speaking, having seldom, or never, been precisely stated, and dwelt on. Several however have written elaborately on 'good reading,' or on *elocution*, generally; and it is not to be denied, that some lucubrations and (in themselves) valuable remarks have been thrown out relative to such qualities in *elocution* as might be classed under the three heads I have laid down, of Perspicuity, Energy, and Elegance; but there is one principle running through all their precepts, which being, according to my views, radically erroneous, must if these views be correct vitiate every system founded on it. The principle I mean is, that in order to acquire the best style of delivery, it is requisite to fix the attention on the voice; to study minutely the emphases, tones, pauses, degrees of loudness, &c., which give the proper effect to each passage that is well delivered—to frame rules founded on the observation of these—and then, in practice, deliberately and carefully to conform the utterance to these rules, so as to form a complete artificial system of *elocution*.—*Whately, Elements of Rhetoric, pt. iv. ch. i. § 3, 4.*

2. Eloquence (in the way of diction). *Of doubtful propriety.*

The third happiness of this poet's imagination is *elocution*, or the art of clothing or adorning that thought so found, and varied, in apt, significant, and sounding words.—*Dryden.*

As I have endeavoured to adorn it with noble thoughts, so much more to express those thoughts with *elocution*.—*Id.*

Elocutive. *adj.* Having the power of eloquent expression or diction.

Though preaching, in its *elocutive* part, be but the conception of man.—*Fellham, Remotes, ii. 4.*

Eloge. *s.* [Fr.] Funeral oration; panegyric on the dead.

I return you, sir, the two *eloges*, which I have perused with pleasure. I borrow that word from your language, because we have none in our own that exactly expresses it.—*Bishop Atterbury, Letter to Monsieur Thieriot, Epistolary Correspondence, i. 179.*

Elogist. *s.* One who pronounces an *elogie*.

[One] made the funeral sermon, who had been one of her professed suitors; and so she did not want a passionate *elogist*, as well as an excellent preacher. *Sir H. Wotton, Reliquia Wottonianæ, p. 364.*

Elogium. *s.* Latin, and original, form of *Eloge* and *Eulogy*.

More, Decay of Christian Piety, ch. v. (Ord MS.)*

There are very common funeral orations and *elogiums* on deceased persons, who have acted among mankind with some figure and reputation.—*Addison, Spectator, no. 217. (Ord MS.)*

This whole universality of things, which we call the world, is indeed nothing else but a production, and *elongation*, and dilatation of the natural goodness of Almighty God.—*Eutherby, Athanasia, p. 297.*

3. Distance; space at which one thing is distant from another.

The distant points in the celestial expansion appear to the eye in so small a degree of *elongation* from another, as bears no proportion to what is real.—*Glaucilla, Serapion Scientificæ.*

Our voluntary *elongation* of ourselves from God's presence, must needs be a fearful introduction to an everlasting distance from him.—*Bishop Hall, Remains, p. 80.*

Nor then had it been placed in a middle point, but that of descent, or *elongation*.—*Sir T. Browne, Vulgar Errors.*

* Athens or free Rome, where eloquence
Flourish'd, since mute.

Milton, Paradise Lost, ix. 671.

Little force is necessary to push down heavy bodies placed on the verge of a declivity; but much force is requisite to stop them in their progress, and push them up. If a man should say, that because the first is more frequently effected than the last, it is the best trial of strength, and the only suitable one to which it can be applied, we should at least not think him remarkable for distinctness in his ideas. Popularity alone, therefore, is no test at all of the eloquence of the speaker, no more than velocity alone would be, of the force of the external impulse originally given to the body moving. As in this the direction of the body, and other circumstances, must be taken into the account; so, in that, you must consider the tendency of the feeling, whether it favours or opposes the views of the hearers.

To head a sect, to infuse party-spirit, to make men arrogant, uncharitable, and unreluctant, is the easiest task imaginable, and to which almost any blockhead is fully equal. But to produce the contrary effect, to subdue the spirit of faction (in religious matters), and that monster, spiritual pride, with which it is invariably accompanied, to inspire equity, moderation, and charity into men's sentiments and conduct with regard to others, is the genuine test of eloquence.—*Campbell, Rhetoric, b. i. ch. x. sec. 6, p. 230.*

There is but little *eloquence* in convincing men that they are in the right, or inducing them to approve a character which coincides with their own.

Whately, Elements of Rhetoric, pt. ii. ch. iii. § 1.

This is the perfection of judicial eloquence: not avoiding argument, but confining it to such reasoning as becomes him who has rather to explain the grounds of his own conviction, than to labour at convincing others; and rejecting reference to authority, but never betaking a disposition to seek shelter behind other men's names, for what he might fear to pronounce in his own person; not disdaining even ornaments, but those of the more elevated graces that accord with the severe standard of a judge's oratory. This perfection of judicial eloquence Sir William Grant attained, and its effect upon all listeners was as certain and as powerful as its merits were incontestable and exalted.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Sir William Grant.*

Again, in questions of style and eloquence, the judgment of the people, or at least of the persons to whom the composition is addressed, must be taken as the test of its answering the purpose for which it is intended; since, in the department of rhetoric, the object is to make an impression on the hearer or reader, and thus to influence his conviction or raise his passions. According to the maxim quoted by Lord Bacon, 'Linguarum ut vulgus, sententium ut sapientia.'—*Sir J. C. Lamb, On the Influence of Authority in Matters of Opinion, ch. vi.*

Eloquent. *adj.* Having the power of oratory; having the power of fluent and eloquent speech.

What dust we dole on, when 'tis man we love.

Or else, good night your vow.

He says, 'twas then with him, as now with you;
He did it when he had nothing else to do.

There is not any common place more insisted on by those who treat of our constitution than the happiness of trials by jury; yet if this blessed part of our law be *eludible* at pleasure by the force of power and artifice, we shall have little reason to boast of our advantage, in this particular, over other states or kingdoms in Europe. *Swift, The Drapier's Letter, 1st. 7.*

When an insoluble pulverulent matter like whitening or ground flint, is diffused through a large body of water, and the mixture is allowed to settle for a little, the larger particles will subside. If the supernatant liquid be now carefully decanted or run off, with a syphon, it will contain an impalpable powder, which on repose will collect at the bottom, and may be taken out to dry. The process is called elutriation.—*Cree, Dictionary of Arts, Manufactures, and Mines.*

Elvlock and Elvish. See Elflock and Elfish.

Elver. *s.* See extracts (the derivation being, in the mind of the editor, only probable.)

Elvers [are] small eels caught in some parts of the kingdom, particularly about Gloucester and Tewkesbury. These are, in reality, young eels, or sea-eels. They get up into rivers while very small; and, as they precede the shrimps, it is conjectured that they supply them with food. *Chambers.*

This passage of young eels is called *elver* on the banks of the Thames, and I have very little doubt that the term *elver*, in common use on the banks of Severn for a young eel, is a modification or corruption of *elver*.—*Currier, British Fishes.*

[Fr. *empereur*; Lat. *imperator* (from *imper* = command) = commander.—With this, under the Roman empire, the proper name *Cæsar* nearly corresponded: hence, the special title of the emperor of Austria is *Kaiser*, or *Keyser*. Word for word, though the origin is denuded by many eminent authorities, *Tsar*, or *Czar*, is the same word in a Slavonic form, through a Byzantine medium. Thus far the common term (*Emperor*) runs parallel with the proper name (*Cæsar*); the emperor of Austria being the typical or Roman, the emperor of Russia an approximate or Greek, *Cæsar*. The French title has grown out of the *Empire*, as opposed to the Republic, which it superseded. The other applications of the term, i.e. to the highest magistrates of Morocco, Brazil, China, and Hayti, are purely arbitrary.]

Emphatic. adj. Having emphasis.

In proper and *emphatic* terms, thou didst paint the blazing raven's fiery tail.—*Arbutnot, History of John Bull*.

First, such a system must necessarily be imperfect; because though the *emphatic* word in each sentence may easily be pointed out in writing, no variety of marks that could be invented—not even musical notation would suffice to indicate the different tones in which the different *emphatic* words should be pronounced; though on this depends frequently the whole force, and even sense of the expression. Take, as an instance, the words of Macbeth in the witch's curse, when he is addressed by one of the spirits which they raise: 'Macbeth! Macbeth! Macbeth!' on which he exclaims, 'Had I three ears I'd hear thee'; no one would dispute that the stress is to be laid on the word 'three'; and thus much might be indicated to the reader's eye; but if he had nothing else to trust to, he might chance to deliver the passage in such a manner as to be utterly absurd; for it is possible to pronounce the *emphatic* word 'three' in such a tone as to indicate that 'since he has but two ears he cannot hear.' Again, the following passage, 'I am a candle brought to be put under a bushel, or under a bed?' I have heard so pronounced as to imply that there is no other alternative; and yet the emphasis was laid on the right words.—*Whately, Elements of Rhetoric*, pt. iv. ch. ii. § 2.

Compels the weak usurper to obey. *Prior.*

In the following it has both significations; Irene being the *wife* of an emperor, whom she survived, and succeeded as *head* of the empire.

empty. adj. [A.S. *æmtig*; in the German *leer*, in the Norse languages *tóm*, is the equivalent to the word in its English sense,

its English sense being exceptionn. The meaning in Germany and Scandinavia is connected with, or relating to, an *empt*; *empt* meaning court, office, jurisdiction. For an office to be held by one person, it must have been left *empty* by another, so that *empt* = void to fill up, or vacancy; *vacuus* in Latin having a like import, and meaning not only *empty*, but *open*, or *at leisure to receive*. A connection with the Latin *emo*, so that an *empt*, or place, is *id quod emptum est*, is probable.]

The difference, as given in the entries, rests solely on the authority of Milton. Etymologically, neither word is unexceptionable; both the *-a* (when *adjective*, or preceded by *a*) and the *-i* being Latin rather than Greek elements.] Em-

Emu. *s.* [According to the first extract, a word that came from the Portuguese; probably, however, through a Dutch medium, and from an original belonging to one of the numerous languages of the Indian Archipelago. The spelling with the simple -u seems to be the English representation of the French *ou*; the pronunciation, in England at least, being -ew; *emu* rhyming to *seamew*. In favour of -eu are the authorities of the old ornithologists in general, of some of the newer ones, and of the previous editions of this dictionary, wherein, however, it stands as a simple entry (*Emeu*) without any extract to support it. *Emu*, meanwhile, is the spelling of the British Museum, the Zoological Gardens, and the chief Australian authorities.]

The original application of this term was lux; denoting, at first (as may be seen from the following extract), a Cassowary. The Rhea, too, has been called the American emu. At present the name is conveniently limited to the Australian genus *Dromæus*, which, as far as geographical distribution goes, is eminently natural.

Although many of the facts known with respect to the cassowary of the East Indies may, perhaps, be equally applicable to that of New Holland, yet as they have not been verified by comparison, we shall confine our notices of them to our account of the first species, which we shall designate by the name of *emu*, which was originally bestowed upon it by the Portuguese. The first *emu* seen in Europe was brought over by the Dutch, in whose king of China, in the island of Java, made a present of it at the time of the first navigation to the Indies in the year 1607. Though this bird does not easily bear the voyage, there have been always some *emus* in Europe ever since that period. Of the New Holland cassowary, the bill of which is depressed, while that of the other is compressed internally, M. Vieillot has formed a separate genus, under the name of *casuar* or *Dromæus*. This cassowary is tolerably common in the environs of Botany Bay and Port Jackson. It is very wild, and runs faster than a greyhound. Its flesh is not so ill-flavoured as that of the *emu*, and has taste somewhat resembling that of beef.—*Translation of Cuvier's Règne Animal.*

The only vocal sound the *emu* has been heard to utter is a low booming or pumping noise, which we know is produced in the female by means of the expansion and contraction of a large membranous bag, surrounding an oblong opening through the rings of the trachea; but whether this peculiarity of structure is also to be found in the male I am not aware.—*Gould, Birds of Australia.*

In the *emu* it is interesting to observe that each clavicle commences by a distinct ossification, and long continues separate from the scapula; it does not reach the sternum, but holds the same relative situation as the continuous acromion or clavicular process of the scapula in the other mammalian birds.—*Owen, Anatomy of Vertebrates*, ii. 68.

En- Inseparable element in certain compounds, in all of which it is a prefix. Followed by *b*, *p*, or *m*, it becomes *em*, as may be seen from the preceding entries. It is the French *en*, which is itself formed from the Latin *in*.

In respect to its import and the extent to which it affects our orthography, the following somewhat lengthy remarks must be excused on the strength of the importance of the entries under both *En-* and *In-*; between which there is much confusion, and in the details whereof some considerable alteration will be made. Many words, in the previous editions, are entered under both; some of them being spelt, at the present time, differently from what the authority of Johnson recommended. In others the examples and the entry are at variance. Johnson seems to have favoured the spelling with *i*; many of the words which are spelt with *e* beginning, in his dictionary, with *i*; the converse being comparatively rare. In Todd and Richardson we have similar double entries. Nor will this be wholly avoided in the present edition, though the anomalies will be fewer. Todd seems to have favoured *e*. His

strictures, however, upon his principal and predecessor, carry us but a little way. He remarks that if Johnson had looked more closely to the origin of the several words than he did, he might have been more uniform. *Enquire* and *entire* are from the French; *integrity* and *inquire* from the Latin. This may be found in Johnson's own preface. Nor does the remark touch the real difficulties of the question; the chief of which lie in those compounds wherein the second element is neither Latin nor French, but English; such as *bold*, *bitter*, and others, giving *embolden* or *imbolden*, *embitter* or *imbitter*, or both, as the case may be. Richardson, whose principle of giving his extracts in their original spelling is one of many useful points in his dictionary, enters each word according to the examples he finds of it. He regrets, however, the want of uniformity, and, after quoting Ben Jonson as evidence that even in the time of Elizabeth the confusion between *e* and *i* in pronunciation was common, and after drawing attention to the difference between the negative and augmentative prefixes, adds that 'it might avoid confusion if the *augmentatives* were always written with *e*.' This is a different principle from Todd's; being logical, or determined by the meaning of the word, rather than etymological, or determined by its origin. How much commoner the use of the prefix under notice is than any dictionary shows, or any lexicographer would think it worth while showing, is suggested by the following extract:—*En*, in composition, was used by our old writers more lavishly than now. Skelton appears to have wavered in such compounds. In the very short space of six pages, in Mr. Chalmers's edition of the Poets, the following occur; of which (as they have not been met with elsewhere) the bare enumeration must suffice; viz. *encreampysh* (i.e. *encreamp*), *ensowk*, *enback*, *enburl*, *encripp*, *engulaxy*, *enloxeage*, *enpave*, *evant*, *enbulion*, *englaise*, *encreown*, *entacle*, *ensund*, *enturf*, *engrape*, *engush*, *enswymu*, *ensilure* (*ensilver*), *englyster*, *enverdure*, *enlrethe*, *enbenny*, *enbud*, *enpicure*, *enslore*, *enrive*. (Rich.)

The difference, suggested by Richardson, between the negative and the augmentative *in-* gives us the first element in our criticism; the word *Augmentative* being borrowed from the Latin grammarians. '*In*,' writes Facioliati, 'in compositione multiplex vim habet, modo enim *intendit* ungetque, ut *increpo*, *insono*, *infractus*; modo (idque sæpius) negat privative, ut *insanus*, *ineptus*; modo *contra* significat, ut *insulto*; modo *intro*, ut *ingrediar*; modo *intus*, ut *inedifico*, *inambulo*; modo *supra*, ut *imminco*.'

Here we have, at last, three powers for *in* :—

1. The ordinary one of inclusion; in which the word is simply the prepositional and adverbial *in*.
2. The Negative, which has probably a different origin.
3. The Augmentative, or Intensive; both terms being exceptionable, the latter, perhaps, the least so. This is the use that gives us *instruction* from *struo*, and others. To generalize the import of this would require a longer induction than has yet been accomplished; one, however, which belongs

to Latin rather than to English philology. What touches us are the facts that :

1. The English *in-* and the Latin *in-*, when simply inclusive, coincide; the *in-* in *income*, being the *in-* in *include*.
2. The Latin *in-*, when negative, is the English *un-*, as *in-cogitatus*, *un-known*.
3. The *in-* intensive, or augmentative, has no equivalent in English; the inference from this want of coincidence being that whenever *in-*, with an intensive power, is combined with an English root, the word is hybrid; i.e. neither wholly Latin nor wholly English, but one of which the parts were put together on English ground, each element belonging to a different language.

The next complication arises from the French *en-*. In the French the Latin *in-* not only becomes *en-*, but the use of it as an intensive element is largely increased. Meanwhile the Italian follows the Latin, and keeps to *in-*; a point of minor importance, but one which must not be wholly overlooked.

To apply all this, it would seem that, in the first instance at least, we should ask in each particular word, how it was made up, whether by prefixing to an English root the Latin or the French form; the one giving *imbitter* and *imbolten*, the other *embitter* and *embolten*. But the answer is impossible. Even if the history of every word were known, there may have been two concurrent formations, or the original one may have undergone a change since its coinage. Fortunately, however, it is certain, that in the great majority of cases it was the French prefix that was adopted, i.e. the form in *en-*. The presumptions arising out of the practical contact of that language with the English favour this view. The general spelling does the same. Hence, as a rule, the editor suggests that in *hybrid words* the syllable *en-* be considered the prefix; the only exceptions being certain words in which, despite of their origin, the spelling with *i* has taken too firm root to admit of alteration. In *Impeach*, which is wholly French, this is, perhaps, the case. At any rate it is left as it was found. *Insurance*, instead of *Insurance*, is the entry of the previous editions.

So much for the *en-* augmentative. For the *en-* inclusive, or rather for the question as to whether it has any existence, see *ENWRAP*.

Enchirial. *adj.* [Gr. *ἐνχίριος*; from *en* = in, and *χρη* = place.] Native; indigenous; popular; demotic; (chiefly used in *Egyptology*). See extract; also Hieratic and Hieroglyphic.

It is remarkable that the translation of a gospel into Coptic introduced a Greek alphabet into the Coptic language. Though for all religious purposes the scribes continue to use the ancient hieroglyphics, in which we trace the first steps by which pictures are made to represent words and syllables rather than letters, yet for the common purposes of writing they had long since made use of the *enchirial* or common hand, in which the earlier system of writing is improved by the characters representing only letters. But, as the hieroglyphics were also always used for carved writing on all subjects, and the common hand only used on papyrus with a reed pen, the latter became a body of individual running hand. . . . It was only on the ancient hieroglyphics thus falling into disuse that the Greeks of Alexandria, aimed for the first time, had the curiosity to study the principles on which they were written. Clements Alexandrinus, who thought no branch of knowledge unworthy of his attention, gives a slight account of them, neatly agreeing with the results of our more recent discoveries. He mentions the three kinds of writing: first, the *hieroglyphic*; secondly, the *hieratic*, which is nearly the same, but is written with a pen, and less ornamental than the carved figures; and, thirdly, the *epistolographic*, or common alphabetic writing, now usually called the *enchirial*. He then divides the hieroglyphic into the alphabetic and the symbol; and, lastly, he divides the symbol into the figurative, the figurative, and the allegorical. — *Sharp, History of Egypt*, ch. xiv.

Enclitic. *s.* [Gr. *ἐνκλιτικός*; from root of *εἵλω* = slope.] In *Grammar*. Particle which throws back the accent upon the foregoing syllable.

It is observed too often that men of wit do so much employ their thoughts upon the speculations, that things useful to mankind are wholly neglected; and they are busy in making encinations upon some *enclitics* in a Greek author, while obvious things, that every man may have use for, are wholly overlooked. — *Zeller*, no. 14.

This diversity between the contradistinctive pronouns and the *enclitic*, is not unknown even to the English tongue. When we say, 'Give me content,' the *me* in this case is a perfect *enclitic*. But when we say, 'Give me content, give him his thousands,' the *me* and him are no longer *enclitics*; but as they stand in opposition, and assume an accent of their

own, and so become the true *ἀποδομιτικά*, i. e. uprightly accented. — *Harris, Hermes*, b. i. ch. v.

I know we use to call this talkativeness a feminine vice; but to speak impartially, I think, though we have given them the *enclosure* of the scandal, they have not of the fault; and he that shall appropriate loquacity to women, may perhaps sometimes need to light Diogenes's candle to seek a man. — *Dr. H. More, Good Government of the Tongue*. (Ord MS.)

Let no man appropriate what God hath made common; that is, without justice and clarity, and by unbecoming accidents that hath declared his displeasure against such *enclosure*. — *Jerry Taylor*.

Your true encyclopædicist is the Homer, the Shakespeare; every genuine poet is a living, embodied, real encyclopædicist in more or fewer volumes. ... But the truth is, as regards Diderot, this saying of the encyclopædicist head comes mainly from his having edited a book called the *Encyclopædia*.—*Carlyle, Critical and Miscellaneous Essays, Diderot*.

tween 1750 and 1784, only four persons. The extraordinary diminution during the latter period, was partly owing to the great authority wielded by Aranda, the friend of the encyclopædists and of other French sceptics. Hackle, *History of Civilization in England*, vol. ii. ch. i.

[In the following passage of Genesis,

*Loth said, God hath endued me with a good blessing. (Genesis, xxx, 20.)

it seems inaccurately printed for *endow*, Dr. Johnson says. But *endue* was formerly used in the sense also of 'investing' with other powers and advantages than those of the mind; though Dr. Johnson gives the definition only as it applies to mental excellencies. Not such was the opinion of Barret, who, in his dictionary of 1658, renders *indue* by *providere*, applyre it to the ornaments of honour and fortune as well as of wit and virtue. In short, *endue* is to clothe, to invest as with clothes. And Spenser uses it, with the very phrase in question, 'to endue with a dower.' Nor is the pretended misprint to be found only in our present version of the Bible. It is *endue* in other versions long before it. In Bishop Wilson's Bible, published in 1758, the word, however, is changed into *adorned*. The editors of the Bible which the Society for promoting Christian Knowledge has lately caused to be published with a selection of annotations by those accomplished scholars, have neither remarked the word as incorrect, nor unwarrantably dismissed it from the text. *Todd*.]

the earlier period of our history the engraving of

and was jealously guarded against by the municipal
law. The meaning of the word is misunderstood by
Blackstone, who explains it as 'the getting into our
possession, or buying up, large quantities of corn,

otherwise have been brought to market by the pro-
ducers themselves. French, *engrosser*, to great-

Inventress of the vocal frame;
The sweet enthusiast, from her sacred store,

fore.

Enthymem. s. [Gr. *en thyma* (from *en* = in, and *thymē* = mind)—something kept in the mind rather than expressed.] Argument consisting only of an antecedent and consequential proposition; syllogism where one premiss is suppressed.

Playing much upon the simple or illustrative argumentation, to induce their enthymemes unto the people, they take up popular conceits.—*Sir T. Browne, Vulgar Errors*.

What is an enthymem? quoth Carolinus.—Why, an enthymem, replied Crumble, is when the major is indeed married to the minor, but the marriage kept secret. *Archbold and Pope.*

There are various abridged forms of argument which may be easily expanded into regular syllogisms; such as, 1st, the enthymem (the word *enthymem* is employed in a different sense from this, by Aristotle, in *Rhet.* b. i.) which is a syllogism with one premiss suppressed. As all the terms will be found in the remaining premiss and conclusion, it will be easy to fill up the syl.

By supplying the premiss that is wanting, whether major or minor; e.g. 'Caesar was tyrant; therefore he deserved death.' 'A free nation must be happy; therefore the English are happy.' This is the ordinary form of speaking and writing. It is evident that enthymemes may be filled up hypothetically. It is to be observed, that the enthymem is not strictly syllogistic; i.e. its conclusion is not apparent from the mere form of expression, till the suppressed premiss shall have been, either actually or mentally supplied. The expressed premiss may be true, and yet the conclusion false.—*Whately, Elements of Logic*, b. ii. ch. iv. § 7, and note.

'Cognito, ergo sum,'—this famous enthymem of the Christian philosophy, veiled in rather foreign language, that was to him, and must be to us all, the eternal basis of conviction, which no argument can strengthen, which no sophistry can impair, the con-

sciousness of a self within, a perceptive indivisible ego. Gassendi imputed to Descartes that, on his fundamental *enthymem*, 'Cognito, ergo sum,' he supposed a knowledge of the major premiss, 'Quod cogitat, est.'—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. ii. ch. iii. § 80, 105.

Enthymem. s. Having the form of an enthymem.

Encountered as they may be with handy *troke* of syllogism, or *enthymem* conclusion.—*Hooker, Fabrica of the Church*, p. 63: 1005.

Entice. v. a. [N.Fr. *enticer* = excite, provoke.] Allure; draw by blandishments or hopes to something sinful or destructive; attract.

The readiest way to entangle the mind with false doctrine, is first to entice the will to wanton living.—*Archbishop, Schoolmaster.*

For ill to ill superlative

Entire. adj. [Fr. *entier*; Lat. *integer*.]

1. Whole; undivided; unbroken; complete in its parts; full; comprising all requisites in itself.

The church of Rome hath rightly considered that publick prayer is a duty *entire* in itself, a duty requisite to be performed much oftener than sermons can be made. *Hooker, Ecclesiastical Polity.*

Spelt with i.

'The lawful power of making laws, to command whole politick societies of men, belongeth so properly unto the same *entire* societies, that for any prince to exercise the same of himself, and not either by express commission immediately and personally received from God, or else by authority derived at the first from their consent upon whose persons he imposes laws, it is no better than mere tyranny.—*Hooker, Ecclesiastical Polity.*

2. Unmingled; unallayed.

Wrath shall be no more
Thenceforth, but in thy presence joy *entire*.
Milton, Paradise Lost, iii. 264.

3. Impartial.

Entire and sure the monarch's rule must prove, Who founds her greatness on her subjects' love.

No man had ever a heart more entire to the king, the church, or his country; but he never studied the easiest ways to those ends.—*Lord Clarendon, History of the Grand Rebellion.*

5. ? Interior; internal. [If this explanation be true, we have in the extract a fresh word, one derived ultimately from *in*, but more immediately connected with *interior*. The details, however, have not been sufficiently examined to justify a separate entry. Supposing the two words to exist, it is clear that their several senses may run into one another; in which case, the complication which occurs in *Entlow* and *Entine*, and in several other words, presents itself. Under *Entireness* the explanation *intimacy* is Johnson's; and this, given as it is without any reference to *in*, is evidence in favour of the connection. *Entirely*, too, as used in Spenser, may mean the 'inner man.']

Casting flakes of lust full fire,
 From his false eyes, into their hearts and parts entire.
Spenser, Faerie Queen, iv. 3. 48.

Entirely. *adv.* In an entire manner; in the whole; without division; completely; fully.

General comment entirely altered the whole frame of their government.—*Swift.*

? (*Derivation and exact import doubtful.*)
 See remarks under *Entire*, 5.

Which when his pensive body saw from far,
 Great woe and sorrow did her soul assay,
 As weening that the sad end of the war,
 And gain to highest God entirely pray.

Entireness. *s.* Attribute suggested by *Entire*.

1. Totality; completeness; fullness.

 Should I divide and dissipate so
 Virtue, which did in our entireness grow.

Dating antiquities . . . more admire the rust or fragments of edicts, than their splendour or entireness.—*Whitlock, Observations on the present Manners of the English, p. 216: 653.*

In an arch, each single stone, which, if severed from the rest, would be perhaps defenceless, is sufficiently secured by the solidity and entireness of the whole fabric, of which it is a part.—*Dugle.*

Spelt with *i*.
 So shall all times find me the same:
 You this intireness better may fulfill,
 Who have the pattern with you still.
Donne.

2. Intimacy. See *Entire*, 5.

True Christian love may be separated from acquaintance, and acquaintance from entireness.—*Bishop Hall.*

A little friendship with such is enough, the less communion with any of God's enemies, the more safety; and sure I am, that those who affect a familiar entireness with such, betray either too much boldness, or too little conscience.—*Junius, Sin stigmatized, p. 777.*

Entirety. *s.* [N. Fr. *entierité*.] Completeness, Sometimes the attorney thrusteth into the writ the utmost quantity; or else setteth down an entirety, where but a moiety was to be passed.—*Bacon, Office of Attorneys.*

This is the natural and regular consequence of the union and entirety of their interests.—*Sir W. Blackstone, Commentaries on the Laws of England.*

Entitatively. *adj.* Considered by itself as a pure entity; abstracted from all circumstances. *Rare.*

Metaphysicians have here a noble field for their

abstracted flights, whether, according to Parmenides, there be any divine discourse in sin? Whether, with others, moral evil has any real essence, or real efficient cause, or only deficient? Whether there be any pure evil? Whether it be a privation of being, or a real positive being? Whether it has not some natural good for its subject, and so the entitatively material act of sin be physically or morally good?—*Ellis, Knowledge of Divine Things, p. 310.*

Entitatively. *adv.* See *Entire*.

A thing is said to be taken or considered entitatively, or 'secundum entitatem,' when considered unalloyed, and precisely, according to what it is in itself, without any thing intruding; as, Peter, entitatively taken, is Peter as a thing, a substance, a man, &c., without any regard to his being a lord, a husband, learned, &c.—*Chambers.*

Entitle. *v. a.*

1. Designate by means of a title; give a title or discriminative appellation to anything; superscribe, or prefix as a title.

Besides the Scripture, the books which they call ecclesiastical were thought not unworthy to be brought into public notice, and with that name they entitled the books which we term Apocryphal.—*Hooks, Ecclesiastical Policy.*

 Who highly thus to entitle me vouchsaf'st,
 For other name deserving.

2. Give a claim to anything.

 Entitled to your hearth and rites divine,
 Are banish'd earth. *Dequon, Virgil's Eclog.*

This is to entitle God's care how and to what we please.—*Locke.*

Entity. *s.* [L. Lat. *entitas*, from *ens*, -*entis*,

pres. part. of *esse* to be; equivalent to the Greek *ὄν, ὄντος*, whence *Ontology*. Its root, or at least a simpler form of it, *ens*—thing being, can scarcely be considered an English word, though it is by no means uncommon in works relating to logic. It generally, however, is used in combination with some other word which is, for the most part, Latin also. Milton, in his Vacation Exercise, has *entium ens*. The phrase *ens rationis* is the commonest, meaning an object existing only as a mental, or as an approximation to a mental, image. Of the derivations from *ens* the use is irregular; chiefly because two other words are sufficiently allied to it to create complications—*Exist* and *Be*. The former, from the more definite character of its elements (*ex*—out, and *sto*—stand) suggests a notion of reality which is wanting in the root of *ens*; whilst *Being*, though connected with *am*, *is*, and the other congeners of *ens*, by the artificial system of our common grammars, is from a wholly different root, that of the Lat. *fi*, and the Gr. *γεν*, wherein a notion of 'becoming' or 'growing so as to become' anything is suggested. Besides which the termination -*ing* is ambiguous. Only when it means a 'thing in existence' does it correspond with the *ens*. When a verbal abstract, as from *be-ung*, it answers to *entia*, if such a word exists.

Neither does *ens*, when compared with the Greek *ὄν*, run exactly parallel to it. Though both are not only participles, but

participles from the same root, they differ in the fact of the Latin wanting, the Greek having, an article. Hence, the Latin equivalent to *ὄν ὅν*—the existent, is not to be got out of *ens*. For further remarks on this point, see *Exist*.

For the last two syllables in *ent-ity* to have their full import, *ent-ity* should differ from an *ens*, as *ent-itas*, *futu-itas*, and others differ from *ent-us*, *futu-us*, &c. The difference, however, is generally overlooked, and the negative compound *non-ent-ity*, which is far commoner than the simpler term, means *non-ens*, or *id quod non est*.]

1. Ideal conception. (In the first of the following extracts we might read *entia rationalia* instead; neither would the evidence of their imaginary character be much impaired if 'abstract' were omitted. We could not write *existences*; the word would suggest too much of a notion of reality: we might do so, however, in the second. In both the word is plural, a fact which indicates its departure from its proper abstract character.)

The words Nominalist and Realist came into use about the end of the twelfth century. . . . Scotus and his disciples were the great maintainers of realism. If there were no substantial forms, he argued, that is, nothing real, which determines the mode of being in each individual, men and brutes would be of the same substance; for they do not differ as to matter, we can extrinsic accidents make a substantive difference. There must be a substantial form of a horse, another of a lion, another of a man. . . . These reasonings . . . were met by Ockham with others which sometimes appear more refined and obscure. He confined reality to objective things, denying it to the host of abstract *entia* brought forward by Scotus. He makes a universal to be a 'particular intention . . . of the mind itself capable of being predicated of many things, not for what it properly is itself, but for what those things are; so that, in so far as it has this capacity, it is called universal, but, inasmuch as it is one form really existing in the mind, it is called singular.'—*Dallman, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*, pt. I. ch. iii.

The conception, under which the Church holds her place in that communion, represents the combined result of two distinct but harmonious ideas. The first of these is that developed by Coleridge with so much depth and power, the idea of a national church as a part inherent in every well-constituted body politic; a class, that is to say, whose function it shall be, by study and by the communication of its results, to sustain and to propagate the sense of the unseen world, of a divine supreme Intelligence of truth, of beauty, of order in matter wholly imaginative or mixed, and of all those inseparable *entia* which form the required counterpoise to our material necessities, and prevent us from being wholly absorbed in our efforts to supply them. *Gladden, The State in its Relations with the Church*, ch. vi. sect. 1. § 3.

2. Character of existence.

Where *ent-ity* and quibility,
 The souls of deities bodies fly. *Butler, Hudibras.*
 God's decrees of salvation and damnation, both Romanish and reformed, alike to men's particular *ent-ity*, absolutely considered, without any respect to demeanours.—*Hammond, On Pseudomystical.*

3. The following denies a *process* to be an entity; the doctrine of the editor being that the contemplation of a process, as a mode, gives us the nearest approach to one, the mind being rather an *ens*, and the necessity for drawing a distinction between the simpler form and the derivative being recognized. With a word dealing in the exhibition of minuter shades of meaning the distinction is needed.

Idealism assumes that minds are *entia*; that ideas are *entia*; and that ideas exist in minds. . . . Let it be granted that its belief—mind is an *ent-ity*, is a belief proved by the inconceivability of its negation to invariably exist (which is not the fact; for mind is conceivable as not an *ent-ity*, but a process); let it be granted that it has the like authority for the belief—ideas are *entia* (which is not the fact; for ideas are conceivable as phases of the process, mind); and let it be granted, that for its belief—ideas exist in the mind, &c. *Herbert Spencer, Principles of Psychology.*

4. Sensible amount; enough to constitute a reality.

All eruptions of air, though small and slight, give an *entity* of sound, which we call crackling, puffing, and spitting; as in hay salt and hay leaves cast into the fire.—*Boone*.

This notion of reality, for which the congeners of Existence are better suited, seems to be implied in the following.

Dear hope! earth's dowry and heaven's debt,
The *entity* of things that are not yet;
Sub'lest, but surest being. *Crashaw*.

5. In the following the simple sense seems complicated by the connection of *en-* with *in-*, superadded to the association of ideas suggested by *ex*.

When we were when the foundations of the earth were laid, when the morning stars came together, and all the sons of God shouted for joy, he must answer who asked it; who understands *entity* of preordination, and beings yet unborn; who hath in his intellect the ideal existence of things, and *entities* before their existence.—*Sir T. Browne, Christian Morals*, iii. 23.

In the next, *inherent quality* might be substituted.

Fortune is no *real entity*, nor physical essence, but a mere relative signification. *Booth*.

Entoil. *v. a.* Bring into toils or nets. *Rare*.

He cut off their land forces from their ships, and entailed both their navy and their camp with a greater power than theirs, both by sea and land.—*Boone, New Atlantis*.

Entomb. *v. a.* Put into a tomb; bury.

Processions were first begun for the interring of holy martyrs, and the visiting of those places where they were entombed.—*Hooker, Ecclesiastical Polity*.

I think I could, with far less pain and reluctance, suffer my body to be buried alive in the cold earth, than so stark and stupid a conceit to entomb my soul.—*Dr. H. More, Notes on Psychical Science*.

They within the breast's vast wounds,
The choice and flower of all their troops entomb,
Et aequari immemor stridis domos.

We build us houses where we should entomb us.
Dryden, Don Juan.

Spelt with i.

What commendation had the Jews for the ceremony of odours used about the bodies of the dead, after which custom, notwithstanding, our Lord was contented that his own most precious blood should be entombed.—*Hooker, Ecclesiastical Polity*.

Mighty heroes' more majestic shades,
And youths entomb'd before their fathers' eyes.
Dryden.

Entombment. *s.* Burial; state of being shut up in a tomb.

The strictest imprisonment is far more tolerable than being shut up by a lazy humour from profitable employment; this enchaineth a man hand and foot; this is beyond any imprisonment; it is the very entombment of a man, quite sequestering him from the world, and delivering him from any valuable concerns therein.—*Burton, Scenarios*, vol. iii. ser. xix.

Many thousands have had their entombment in the waters.—*Jr. H. More, Mystery of Gulliver*, p. 16: 1699.

Entomological. *adj.* Connected with Entomology.

My main object has been to draw attention to the fact, that the great obstacles which Nature has placed against the too rapid dispersion of animal life should be more strictly taken into account (as a matter of positive reality) than it is, during our investigations into entomological geography.—*T. V. Wollaston, On the Variations of Species*, ch. v.

Entomologist. *s.* Investigator in Entomology.

(For examples see extracts under next entry.)

Entomology. *s.* [Gr. *ἐντομή* insect, *λόγος* word, principle.] Study of the natural history of insects.

Nothing would recommend entomology more than some neat plates, that should well express the general distinctions of insects, according to Linnaeus.—*White, Natural History of Scotland*, p. 91.

After the works of Ray, Lister, and Latreille, the intelligent entomologists of our own country, ... the name of Hutton might perhaps to have been introduced. ... The works of Hutton in France contributed materially to facilitate the study of entomology on the continent. ... These papers immediately preceded the publication of the first work, which the celebrated Linnaeus presented to the world.—*Rees, Cyclopaedia*, in voce.

This definition and nomenclature of the bee's trophic is indispensable for conveying the results of such comparisons as those which enabled the venerable Kirby to enrich entomology with so valuable

an accession of knowledge as is contained in his Monographia Animalia Anglica, a work which the young entomologist may take as a model.—*Owen, Lectures on Comparative Anatomy*, lect. xvii.

Entomotrachea. *s.* and *adj.* Belonging to, or member of, the class Entomotrachea.

Entomotrachea. *s.* pl. entomotrachea. [Gr. *ἐντομή* insect, *τράχεια* shell.] In Zoology. Member of a class of crustaceous animals represented in the English fauna by the water-flea and other small animals like it, and falling into numerous divisions and subdivisions. For a more general import, see Malacostrachea.

When we come to the coal-measures, the Malacostrachea disappear; but we then find the gigantic entomotrachea called the *kinorhynch*; thence down to the lowest strata in which any trace of animal life has been found, the crustaceous class is exclusively represented by entomotrachean species, and more particularly by a peculiar form of *Entomotrachea*, which became extinct before the coal-measures were deposited. ... The distinction between the *Entomotrachea* and *Malacostrachea*, in the numerical character of the segments of the body, is of the first importance in determining the affinities of those ancient extinct crustacea, called Trilobites. ... Professor Emmerich remarks the Trilobites as a peculiar order, connecting the *Malacostrachea* with the *Entomotrachea*, but more nearly related to the latter. He thinks them allied to the *Malacostrachea* by their crust-like shell, and by their not possessing simple eyes together with compound ones; but this distinction is rare even in the *Entomotrachea*. It denies the *Xiphosura* and the *Phyllofoda* to be the two orders of *Entomotrachea* to which the Trilobites are united by the nearest characters of affinity.—*Owen, Lectures on Comparative Anatomy*.

Entomotrachea. *adj.* Belonging to, or connected with, the Entomotrachea.

(For example see extract under preceding entry.)

Entortilation. *s.* [Fr. *entortillement*; from Lat. *tortilis*—capable of being twisted.] Turning into a circle or round figure.

Willine that those which should work in the borders [of the table,] rubrics, flowers, and wrappings, entortilations, and such like, should amuse themselves only for beauty and decoration; and what was to be plain should answer to the measure and dimension; and that in all these things they should be especially careful.—*Doune, History of the Septuagint*, p. 17: 1693.

Entower. *v. a.* Confine in the Tower. *Rare*.

An earl of Warwick, after the entowering of Henry the VI., brought him back again.—*Drummond, A-suer*, 214. (Ord 1818.)

Entozoic. *adj.* Relating to, connected with, or constituted by, Entozoa.

In both the infusorial and entozoic classes the body assumes a more perfect linear and bilateral form as the species advance in the scale of organisation.—*Owen, Lectures on Comparative Anatomy*, lect. xi.

Entozoologist. *s.* Investigator of the natural history of the entozoa.

This great entozoologist [Rudolphi], who devoted the leisure of a long life to the successful study of the present multiplying class, divided the parasitic entozoa here associated in the class Stercorintha, into four orders.—*Owen, Lectures on Comparative Anatomy*.

Entozoon. *s.* plur. entozoa. [Gr. *ἐντός* within, *ζῷον* animal.] In Zoology. Intestinal worm.

The geographical distribution of the human *Entozoa* is, likewise, opposed to the doctrine of their spontaneous origin. The organic particles, or alimentary mucus of a Swiss and Dutchman, are not so distinct in their nature as to account for the difference in their tapeworms. Yet no Swiss that never left his native mountains ever had a *Tenia solium*, and no Dutchman, the constant resident of his swamps, ever had a *Holothrocephalus latius*. But a native of either of these countries may be infected by the tapeworm peculiar to another region, if he sojourn there; just as the English sailor may be attacked by the Guinea-worm, if he visits the tropical regions where that *entozoon* is common. The great anatomist Boerhaave suffered from a *Holothrocephalus latius*. Now he was a German; but it was ascertained that he paid occasional visits to a friend in Switzerland.—*Owen, Lectures on Comparative Anatomy*, lect. iv.

In no class of animals has the origin from equivoal generation been more strenuously contended for than in regard to the entozoa. The great entozoologists Rudolphi and Bremer were advocates of this doctrine. ... The advocates for the equivoal generation of the entozoa admit the fact, that herbivorous animals are not less subject to entozoa than carnivorous ones; and how, they inquire, could

the ova of entozoa be preserved in the water that serves as the drink of such animals? Or how, having become dried in the air, could such ova afterwards resume the requisite vitality for embryonic development?—*Ibid.* lect. vi.

Entrail. *v. a.* Interweave. *Rare*.

In which they gather'd flowers. *Id., Prothalamium*.

Entrails. *s.* [Fr. *entrailles*.]

1. Intestines; bowels.

The *entrails* are all without bones; save that a bone is sometimes found in the heart of a stag.—*Boone, Natural and Experimental History*.

2. Internal parts in general.

Most of her ribs as *entrails*; being now

Was in a pleasing dream of paradise. *Dryden*.

Entrap. *v. a.* Ensnare; catch in a trap or snare; involve unexpectedly in difficulties or distresses; entangle.

5. In *Law*. See *extract*.

By help of such confederacies, parties were enabled to make violent *entries* upon the lands they claimed, which the law itself could hardly be said to discourage. . . . If a man was dispossessed of his land, he might enter upon the dispossessor, and retortate himself without course of law. In what case this right of *entry* was taken away, or toll'd, as it was expressed, by the death or alienation of the dispossessor, is a subject extensive enough to occupy two chapters of Littleton. What relating to our inquiry, is that by an *entry*, in the old law-books, we must understand an actual re-possession of the dispossessor, not a suit in replevin, as it is now interpreted, but which is a comparatively modern proceeding. The first remedy, says Britton, of the dispossessor is to collect a body of his friends, and without delay to cast out the dispossessor, or at least to maintain himself in possession along with them. This *entry* ought indeed . . . to be made peaceably; and the justices might assemble the posse comitatus, to imprison persons entering on lands by violence; . . . but these laws imply the facts that made them necessary.—*Hallam,*

This presumption only proceeds in respect of the dispositive words, and not in regard of the *enunciative* terms thereof.—*Ayliffe, Perpetua Juris Canonica*.

Enure, v. a. [see last extract.]

1. Habituate; make ready or willing by practice and custom; accustom: (with *in*, *to*, and *with*.)

That it may no painful work endure,
It to strong labour can itself endure.

Spenser, Mother Hubbard's Tale.

England was a peaceable kingdom, and had lately *enured* to the mild and gently government of the Conqueror.—*Spenser, View of the State of Ireland*.

I like your late English hexameters so exceedingly well that I also *enure* my pen sometimes in that kind; which I find, indeed, as I have often heard you defend in word, neither so hard nor so harsh but it will easily and fairly yield itself to our mother tongue.—*Id.*, Letter to Gabriel Harvey.

Spelt with *i*.

Because they so proudly insult, we must a little *inure* their ears with learning, how others, when they more regard, are accustomed to use the self-same language with us.—*Hooker, Ecclesiastical Polity*.

If there might be added true art and learning, there would be as much difference, in maturity of judgment, between men *thence with inured*, and that which now men are, as between men that are new, and innocents. *Id.*

'The forward hand, *inured* to wounds, makes way
Upon the sharpest fronts of the most fierce, *Daunt*.
Then cruel, by their sport to blood *inured*
Of fighting beasts, and men to blood *inured*.'

For fighting, as Sovereign King and to *inure*

Of many heinous crimes by her *enured*.
Spenser, Faerie Queen, v. 9. 33.

[*Enure*.—From French *enure*, imp, fortune, chance, was formed. English *enure*, fortune, destiny, the experience of good or evil.

'Now late hire came, and hie as God your *enure*
For your disposal, taketh your adventure.'
(*Id.*, corrected from Halliwell.)

'And man will dwell with him but that
That would stand with him to the end,
And take the *enure* that God wold send.'

(*The House*, viii. 105.)

Hence to *enure* in *ure*, to put in *ure*, or to *enure*, is to experience, to practise, to take effect.

Salomon

Tellth a tale—whether in deile done
Or mekely felid to our instruction
Let clerkes determine, but this I am sure
Muche like what I myself *enure* had in *ure*.'

'He can that lady's cruelty to neglect
Of many heinous crimes by her *enured*.'

(*Faerie Queen* in Richardson.)

Inured to arms, proved in arms. To *enure* to (in advantage of some one, in local language, is to take effect to his advantage. The French *enure* is not to be confounded with *enure*, here, moment, being derived (as conclusively established by Diez) from Latin *angurium*, Portuguese *angura*, Provencal *angur*, *agur*, Catalan *angur*, many, many; whence Provencal *angur*, *angur*, good, evil fortune; Italian *angurata*, *angurata* (conjunctions), ill-omined, unlucky; *angurata*, *angurata*, ill fortune, disaster; Old French *angurata*, fortune, ill-omined. *Dictionary of English Etymology*.]

Enure, v. a. In *Law*. Come into use or power; have effect; be available.

Richard III. is always called, 'in deed and in right, king of England.' Nor was this merely omitted on his usurpation as against his nephew. For that unfortunate boy is little better treated, and in the net of usurpation, Henry VII., while Edward IV. is styled 'late king, appears only with the denomination of 'Edward his son, late called Edward V.' And was his son really illegitimate, as an usurping uncle pretended? Or did the crime of Richard, though punished in him, *enure* to the benefit of Henry? These were points, which, like the fate of the young princes in the Tower, he chose to wrap in discreet silence.—*Hollan, View of the State of Europe during the middle Ages*, ch. viii. pt. 3.

Spelt with *i*.

'The decree of deprivation doth not *enure*, till a judicial sentence passeth further on us. *Bishop of Norwich*. Letter in 1600 in *Life of Kettwell*, Appendix, p. 17.

Enurement, s. Practice; habit; use; custom: frequency. (spelt with *i*.)

If men will acquire by more continuance a secret appetite, and (as I may term it) an habitual inclination to the site it held before; then how much more may we hope, through the very same means, that being nothing else but a constant plied and *enurement*, to induce by custom good habits into a reasonable creature!—*W. Wotton, Essay on the Education of Children*.

Envale, v. a. Place or enclose in a vale. *Rare*.

What fountain send they forth
That finds a river's name, though of the smallest worth,
But it invades itself?

[They] subject and *envassal* themselves unto a base and new master servant of theirs.—*Translation of Barclay*, p. 22: 1624.

Envault, v. a. Enclose, or cover up, in a vault.

Since Anna, whose beauty thy merits had fed,
Ere her own was laid low, had crav'd thy head;
And since our soul given to the wise is so just
To raise heads for such as are humbled in dust,
I wonder, good man, that you are not *envaulted*;
Prithvi! go and be dead, and be doubly exalted!

Swift.

Envell, v. a. Veil. *Rare*. (spelt with *i*.)
Her eyes *envell'd* with sorrow's clouds,
Remorse the light;

Disdain hath wrapt hers in the shrouds
Of bathed night. *W. Browne*.

Envelop, v. a. [Fr. *envelopper*.]

1. Enwrap; cover; invest with some integument; hide; surround.

The best and wisest of spirits of the night
Envelop you, good priest.

A cloud of smoke *envelops* either host,
And all at once the combatants are lost:

Coursers with coursers joining, men with men.

Dryden.

1. Wrapper; outward case; integument; cover.

A letter from the king of Spain was given to his daughter by the Spanish ambassador, and she tore the *envelope*, and he it fell.—*Bishop Barlet, History of his own Time*, an. 1671.

Sent these to paper-wrapping Pope;
And, when he sits to write,
No letter will an *envelope*.

Swift.

When I write to a great man at the court end, he opens with surprise upon a naked note, such as Whitechapel people interchange, with no sweet degrees of *envelope*. I never enclosed any bit of paper in another, nor understood the rationale of it. Once only I sealed with borrowed wax, to set Walter Scott a wondering, seized with the imperial quarter arms of England, which my friend Field bears in emulation to his descent, in the female line, from Oliver Cromwell. It must have set his antiquarian curiosity upon watering.—*Lamb, Letters to Burton*.

2. Crust; cover in general.

The earth, falling in temperature, must contract. Hence the solid crust at any time existing, is presently too large for the shrinking nucleus; and being unable to support itself, inevitably follows the nucleus. But a spherical *envelope* cannot sink down into contact with a smaller internal spheroid without disruption: it will run into wrinkles, as the rind of an apple does when the bulk of its interior decreases from evaporation. As the cooling progresses and the *envelope* thickens, the ridges consequent on these contractions must become greater; rising ultimately into hills and mountains; and the later systems of mountains thus produced must not only be higher, as we find them to be, but they must be longer, as we also find them to be.—*Herbert Spencer, First Principles*, § 118.

Envelopment, s. Perplexity; entanglement.

They have found so many contrary senses in the same text, that it is become difficult to see any sense;

One of that order, which *envenoms* even poison itself, and makes the Roman religion much more malignant and turbulent than otherwise it would be.—*Chillingworth, Religion of Protestants a safe Way to Salvation*, dedic.

On the question of slavery opinion has of late years been peculiarly *envenom'd*, and attempts have been made by the predominant slaveholding interest to suppress the agitation of the question of emancipation by force; but these efforts have been only partially successful, and have met with much resistance.—*Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. viii.

2. Make odious.

Oh, what a world is this, when what is comely
Envenoms him that bears it!

Shakespeare, As you like it, ii. 3.

3. Enrage; exasperate.

And fix'd it deep within Augusta's heart;
That thus *envenom'd* she might kindle rage,
And sacrifice to strife her house and husband's age.

With conquest, felt the *envenom'd* robe, and tore,

They weren't
To win the mount of God, and on his throne
To set the *envier* of his state, the proud
Aspire.

Milton, Paradise Lost, vi. 57.
All preferments in church and state were given by him, all his kindred and friends promoted, and all his enemies and *enviers* discomfited.—*Lord Clarendon, History of the Great Rebellion*.

Envigour, v. a. Invigorate. *Rare*.

Again to his wonted solace, *envigours* his shrunk
Nerves, and to a bright flame blows his dying fire.—*Elphinstone, Reader*, 24. (Ord MS.)

with malignity; with ill-will excited by
another's good.

How *enviously* the ladies look,
When they surprise me at my book!
And sigh as they're alive at night.
As soon *enviously* will show their spite. *Swift.*

the land shall fear of it, and shall *environ* us round. *Joshua*, vii. 11.

Whom ribs of honour all *environ*. *Chapman*.
[It should be added that the original is Greek, *en*, in,
and *ypoc*, a circle, whence the Latin *gyrus*, and
thus the French used the adverb *environ* for about;
in which way Chaucer also employs it. 'About the
king ystodun *environ* Attendance, lillience, &c.
(Court of Love, iv. 1611.) He uses also the verb
environ to surround, barred calls *environ* the French
word made of the Latin, quasi in gyrum' (Mr. 1584).
And (Gervase uses the old French verb *environner*,
the same, he says, as *environner*. Todd.]

Environment, s. Surrounding.

As with every inanimate object whose state has
been altered by an alteration in the *environment*,
the alteration undergone by the object does not
lead to produce in it a secondary alteration, in
anticipation of some secondary alteration of the *en-*
vironment. *Herbert Spencer, Principles of Psychol-*
ogy, pl. iii. ch. v.

Environ, s. [French, and often pro-
nounced as such; in which case it is not
an English word; with its pronunciation
Anglicized and used in the plural number,
it is a convenient term.] Neighbourhood,
or neighbouring places round about.

When you go to Genoa, pray deserve carefully all
the *environ* of it. *Lard Chevalier*.
Hilbert Mr. Shennstone had no conception of an
whole, or of disposing his *environ* in any consistent

Shennstone, p. 51.

of some Lord's Travels into Africa and the
Great Arab, p. 25.

We have mentioned a *sear* Borgia. . . On two im-
portant occasions Machiavelli was admitted to his
society. . . From some passages in The Prince, and
perhaps also from some indiscreet traditions, several
writers have supposed a connection between these
remarkable men, much closer than ever existed.
The *envoy* has even been accused of prompting
the crimes of the cruel and merciless tyrant. — *Mura-*
nday, Critical and Historical Essays, Machiavelli.

3. Messenger, in general.

The watchful sentinels at every gate,
At every passage to the sacred wall;
Still travel to and fro the nervous way,
And their impetuous to the brain convey;
Where their report the vital *envoy* make,
And with new orders are commanded back.
Sir W. Blackmore.

4. A French rather than an English word;
often preceded by the definite article.)

Generally an address to either a whole
composition or some part of it, with which
it is supposed to be sent into the world.
(In being addressed to the book, rather
than to a patron, it differs from a *dedica-*
tion; and in being written by the *author*,
rather than by one of his friends, from a
recommendatory poem. It generally comes
at the end of a work though not neces-
sarily; since the first two lines of Ovid's
Tristia give in fact, though not in name, a
genuine *envoy*.)

'Parce, meo hinc, sine me, liber, ibis in urbem
Hic mihi! quod dominum hinc ire tunc.'

It is found, too, more frequently in poetry
than in prose, though, again, not exclu-
sively.)

1587. *T. Warton, History of English Poetry*,
iii. 155.

It will be seen . . . that the Blind Minstrel is a
vicious versifier. . . As a specimen of his grov-
el style we may give his *envoy* or concluding lines:

O, worthy book, full of self-right deed;
But in language of help thou hast great need.'

— *Craik, History of English Literature*, i. 330.

1. Hate, or feel discontented with, another for
his excellence, happiness, or success.

A woman does not *envy* a man for fighting courage,
nor a man a woman for her beauty. *Collier, Essay*

and the success of persecutors? — *Ps.*, lxxv. 10.
Reveries of Holy Living.

Envy, s.

1. Pain felt and malignity conceived at the
sight, or repining accompanied by desire
for the possession, of the excellence or
happiness of another.

Envy is a repining at the prosperity or good of
another, or anger and displeasure at any good of an-
other which we wish, or any advantage another hath
above us. — *Reg. Wisdom of God manifested in the*
Works of the Creation.

Envy, to which the ignoble mind's a slave,
Is emulation in the breast of brave. *Pope*.

He [Wharton] had a peculiar way of disarming
opponents which moved the *envy* of all the duellists
of his time. His friends said that he had never
given a challenge, that he had never refused one,
that he had never taken a life, and yet that he had
never fought without having his antagonist's life at
his mercy. — *Maccusay, History of England*, ch. xz.

With of.

All the conspirators, save only he,
Did that they did in *envy* of great Caesar.
Shakespeare, Julius Caesar, v. 5.

With to.

Many suffered death merely in *envy* to their vir-
tues and superior genius. — *Swift*.

2. Rivalry; competition.

You may see the parliament of women, the little
civies of them to one another. — *Dryden, Essay on*
Dramatic Poesy.

3. Malice; malignity.

Mulm, this is a mere distraction;
You turn the good we offer into *envy*.
Shakespeare, Henry VIII. iii. 1.

4. Public odium; ill repute; invidiousness.

Edward Plantagenet should be shewed unto the
people; to discharge the king of the *envy* of that
opinion and trait, how he had been put to death
privily. — *Bacon*.

5. Thing envied.

We are grown out of humour with the English
constitution itself; this is because the object of the
animosity of Englishmen. This constitution in
former days used to be the *envy* of the world; it
was the pattern for politicians; the theme of the
eloquent; the institution of the philosopher in every
part of the world. *Mason, Critical and His-*
torical Essays, Hallam's Constitutional History.

Envy, verbal abs. Ill will; malice.

Envy, murders, drunkenness, revellings, and
such like. — *Gulistan*, v. 21.

Enwallow, v. a. Wallow; sink. *Rare*.

So now all three are senseless huge remains,
Enwallow'd in his own black bloody gore.
Spenser, Faerie Queene, v. 11, 14.

Enweave, v. a. [pret. *enwove* or *in-*
waved; pass. part. *enwoven* (less properly
inwove), *enwoven*.] Mix anything in weav-
ing, so that it forms part of the texture.
(spelt with i.)

A fair border, wrought of sunny flowers,
Enwoven with an ivy winding trail. *Spenser*.

Their crowns, *enwoven* with marigold and gold,
Milton, Paradise Lost, iii. 361.

Enweave, v. a. Encompass; encircle.

Thill to thee, lady; and the grace of heav'n,
Before, behind thee, and on every hand
Enwoven three round. *Shakespeare, Othello*, ii. 1.

Spelt with i.

Heaven's grace *enwoven* ye
And all good thoughts and prayers dwell about ye
Attendance be your friend; and lady charity
Be over at your hand to crown ye glorious!
Bauman and Fletcher, Pilgrim.

Enwind, v. a. Wind round; encircle.

There sat we down upon a earthen mound,
Two mutually enfolded; Love, the third
Enwound us both, in the circle of his arms
Tennyson.

Enwomb, v. a.

1. Make pregnant.

Me then he left *enwomb'd* of this child,
This luckless child, whom thus ye see with blood.
Spenser, Faerie Queene

I'm your mother;
And put you in the catalogue of those
That were *enwomb'd* mine.
Shakespeare, All's well that ends well, i. 2.

2. Bury; hide as in a womb.

Thus the African Niger stream *enwombs*
Itself into the earth, and after comes,
Having first made a natural bridge to pass
For many leagues, far greater than it was;
May't not be said, that her grave shall restore
Her greater power, than that before?
Donne, Poems, p. 218.

Enwood, v. a. Hide in woods. *Rare*. (spelt
with i.)

He got out of the river, and *enwooded* himself, so as
the ladies lost the marking his sportfulness. — *Sir P.*
Sidley.

Enwrap, v. a. Involve.

For another man to yield such unlawful aid, is no
better than a foul affront of publick justice, and *en-*
wraps the agent in a partnership of crime. — *Bishop*
Hall, Cusa of Conscience.

In thy fear, my God, in hope, and love, and con-
fidence, and peace, and every limb and ingredient of
happiness *enwrapped*. — *Donne, Devotions*, p. 133.

Spelt with i.

And over them Arachne high did lift
Her running web, and spread her subtil net,
Enwrapped in foul snare. *Spenser, Faerie Queene*.

This, as an amber drop *enwraps* a bee,
Covering discoverers your quick soul; that we
May in your through-shine front our heart's thoughts
see. *Donne*.

The case is no sooner made than resolved; if it be
made not *enwrapped*, but plainly and perspicuously.
— *Bacon*.

The possibility of the word in the fol-
lowing extracts being an error for *enrap* —

enrapture has been suggested. Either sense will suit; but *enwrap* is the better word.

This pearl she gave me, I do feel 't and see 't;
And though 'tis wonder that *enwraps* me thus,
Yet 'tis not madness.

Shakespeare, *Twelfth Night*, iv. 3.

Spelt with *i*.

For if such holy song

Enwrap our fancy long,

Time will run back, and fetch the age of gold.

Milton, *Ode on the Nativity*, 133.

[The length of the observations upon the prefix *en-*, of which the necessity as suggested under that entry is the excuse, made it necessary to divide the criticism. It is only the *En-* augmentative that has been disposed of. The *En-* inclusive is considered here; i.e. under the last word of the series which illustrates it.

Enwrap is (1) purely English, as opposed to Latin, Norman, French, or Italian; is (2) rarely spelt otherwise than with *i*; and is (3) a word wherein the inclusive import of the prefix is eminently evident. *Entwine* (intwine) and *Enweave* (inweave) imply *intermixture* and *inclusion* only so far as the two terms suggest each other. But *Enwrap*, like *Engrave* and *Entomb*, conveys the notion of *inclusion pure and simple*; meaning *in a wrapping*, *in a grave*, *in a tomb*. Engulf only approaches this accuracy in the way of the expression of inclusion; *Enthroned* may mean *on* or *in*, according as the regal chair is like an *elbowchair* or a *woodcock*.

Taking, then, *En(or in)wrap*, and *En(or in)tomb*, as typical words, and asking how they ought to be spelt, there is no doubt as to two questions: (1) whether the *in-* is English; (2) whether it is inclusive; both being answered in the affirmative. This being the case, they apparently constitute a precedent and analogy for others. But is the combination English? In respect to its elements taken separately, Yes; in respect to the order of their arrangement, or sequence, No.

Whoever looks back upon the pages which immediately precede this, will find that the *in-* inclusive, like the *in-* intensive, has been ignored as an English prefix. He will also find that in nearly all the preceding instances the composition has given *Verbs with the accent on the second syllable*. This is important. Few Substantives have begun with *En-*, and no words wherein the prefix is accented.

The only true compounds of the English *in-* are *Nouns*; and these, when *disyllabic*, are accented on the first syllable. Such are *Income* and *Inlet*, the typical words of the class.

It is submitted that the rule which covers the most details is the following, founded upon the difference between the Adverb and the Preposition. The import of the Adverb is modal in its most general sense; i.e. as when we say a man *goes in* or *enters* (without naming the thing entered), or *goes out* or *makes an exit* (without naming what he goes out from). In Latin this would be *ingreditur* and *egreditur*, simply. The import of the Preposition, modal also, superadds the name of the object that determines the mode, and tells us *what* he went *in* (*to*), or *what* he went *out* (*from*). It always implies a Substantive in an oblique case, which, in grammatical language, it governs. Hence the rule in English (the details of its application in Latin being, though important in a Latin grammar, irrelevant here), that whilst the Adverb may

either precede or follow the Verb, the Preposition must precede the Noun it governs, or, in other words (except for certain rare and exceptional rhetorical cases), follow the Verb. Thus, whilst we say either 'This is *badly* done,' or 'This is done *badly*,' we can only say 'This comes *from* London,' not, 'from-comes London,' or even 'from-comes *from* London.' That between '*badly* done' and '*done badly*' there is a shade of difference in the way of import is not denied. It is only asserted that, as a matter of formal grammar, the two combinations are equally English, while the other is pronounced to be formally impossible.

This, however, carries us but a short way, inasmuch as both *badly* and *from* are extreme cases. The real complication arises from the fact of most of the Prepositions being equivocal or ambiguous. Deprive a Preposition of its case, or, in other words, use it indefinitely and without naming an object, and it becomes an Adverb. To *go in* is to *enter*; to *go up* is to *ascend*. To *fall into a pit* is Prepositional; to *fall in with a person* is to *agree with him*, or to *meet him*, and Adverbial. Yet *in* is originally Prepositional, just as truly as *badly* is Adverbial. Now the extent to which each particular Preposition is also Adverbial varies with the word.

From, as has just been stated, is the least Adverbial of any, being wholly Prepositional. We cannot even say *come from*, *fall from*, or the like. In other words, it never enters into such combinations as those which give *come to*, *lay by*, or *sink in*. The reason for this, probably, lies in the existence of an Adverbial equivalent in *forth*, and its congeners; *go forth* being an approximate equivalent to the Latin *egredi* and *progreſſi*.

To is in a different category; being more Adverbial, or less Prepositional, by one degree. We can say *go to*, *fall to*, and the like; in which there is, generally, a slight change of import: but we cannot say *to-flight*, *to-come*; though the Germans can, e.g. *zuflucht* = refuge.

With *In*, the word under notice, we can do what was done with *to*, and one thing more. We can say *come in*, *fall in*, *lay in*, and the like; and we can also say *income* and *inlet*. But these words are Nouns, not Verbs, and they are (as aforesaid) accented in a different manner from *En(in)grave*, and *En(in)tomb*. The second element, however, is either a Verb in form, or a Verbal, *income* = incoming. Compare this with the Latin *in* in *incido* and *ingredior*. In '*incidit in* Seyllum' we have it twice over; once as an Adverb, and again as a Preposition. In '*ingreditur* tectum' we have it, subject to certain observations which will appear under *In to*, as both.

Out (it is only necessary to notice the words which illustrate the rule) stands to *In* as *In* to *To*. It goes one degree further in the direction of the Adverb. It gives *fall out* (= quarrel); *outlet* (analogous to *inlet*); and, in addition to these, *outrôte*, whereof the result is a Verb with an accent on the last syllable. The same is the case with *over*, *under*, and others; *look over*, *overthrow*, *overlook*, *undertake*, *undertaking*, and the like.

1. To recapitulate. It is only as *Adverbs* that words like *to*, *in*, &c., enter into composition.

2. The extent to which they do so varies with the word.

3. In doing it there are three degrees; (1) the first giving only a Verb, followed by the Adverb; (2) the second the preceding combination, with the addition of one constituted by a prefix and a Noun; (3) the third both the preceding combinations, with the addition of words like *outrôte* and *outrôte*.

4. *In* belongs to the second class. Hence, the only true compounds of *in-* are words like *Income* and *Inlet*.

By a slight extension of these remarks, we may clear the ground in another direction, and save some notices which would otherwise be given under *In-*. Here we have, in a few formations, the Latin *in-*, in *in-nocens*, used instead of the English *un-*; i.e. applied as a prefix to words of English origin. Though this is simply bad writing, it is not in the category with the compounds under notice. Between *in-* and *un-* there is no confusion either of sound or spelling; so that no question as to the propriety or practicability of removing or recasting them exists.

If what has been said be true—and the only objection that lies against it is the improbable doctrine that though such formations as *ingrave* are impossible now, they may have been current in an earlier stage of the language, combined with the fact that in the allied languages they actually exist (*eingehen* = go-in, in-go, &c., in German) it follows that, except as derivatives from the Latin, Italian, and Spanish, no compound in *In* exists in accurate English; and such, on the whole, is the fact. Still there are a few outlying cases. A Verb standing in the same relation to *income* as *surrey* does to *surrey* might perhaps be defended by the writer who resorted to it. Again, *Inbreeding* (how it was sounded is known only to the coiner) has been seen by the editor in a work which, in respect to its matter, is preeminently critical. It means (*in-and-*) *in-breeding*. Whether good or bad, however, the principle that gives it is one which is wholly different from those under consideration. Finally, *Indebted* is, probably, suggested by *in debt*. *Intagelse* = notice (*in-heed-taking*) is a good Danish word so formed. See also *Intrench*.

The principle suggested by *income* and *income*, except that it is reversed in its application, is the justification for the entry of *enlay* as a Noun.

That the compounds of *in-*, with an English verb to follow, are numerous, has already been seen; and though many of them were made carelessly after the loose analogy of the French *en-*, or for the sake of the metre, there is little doubt that in many the notion of inclusion was intended. The barbarous form *invent* exists, and, unless the editor's memory deceives him, in a recognized authority.

Lastly, there are certain words wherein the general character is Latin, though the exact Latin word would be difficult to find in any good author. Such are the words in *-ate*. Hence, whilst *endocrine* is entered under *en-*, *indoctrinate* begins with *in*.

To conclude. Some of the words spelt with *e* are as undoubtedly and as generally sounded with *i*, as *Jem* is pronounced *Jim*. In one of these, *Impeach*, the phonetic principle has prevailed; thereby con-

stituting a precedent for similar recognitions of the actual sound as opposed to the historical Etymology. To spell, however, the whole with *i* would be objectionable. To alter the spelling of each word as it changed, would be to recognize the phonetic principle beyond the likelihood of its being adopted. As it is, a near approach to uniformity is obtained at the price of a slight departure from the actual representation of the sound; it being always remembered that, in cases like the present, the spelling goes far towards determining the sound.

Enwrapment *s.* Covering; wrapper.

The whole paragraph should be thus translated: they wrathed together a foliage of the fictive, and made themselves enwrapments, i.e. they wrapped themselves up in them.—*Shuckford, Creation and Fall of Man*, p. 203.

Enwreath *v. a.* Surround us with a wreath. (spelt with *i*.)

Bind their resplendent locks *enwreath'd* with
beams.
Milton, Paradise Lost, iii. 301.

Nor less the palm of peace *enwreath'd* thy brow.
Thomson.

Enwrought *adj.* Adorned with work. (spelt with *i*.)

Next Camus, reverend sire, went footing slow,
His mantle hairy, and his bonnet sedge,
Enwrought with fescue dim, and on the elbow
Like to that sanguine flower, insert'd with woe.
Milton, Lycidas, 103.

Éocene *adj.* [Gr. *ἠώς* = the goddess of the dawn or morn, and *καιός* = new.—] This is not only a word of recent coinage, but a successful one; the department of scientific enquiry to which it belongs being geology. It was suggested by Sir C. Lyell, along with two others, Miocene and Pliocene, to denote the age of certain tertiary deposits as measured by the proportion borne, in their fossils, of the existing to the extinct species. Where the existing, recent, or new (*καιός*) species were decidedly preponderating (say two thirds of the whole), the division was *Pliocene* (*πλιόσιος* or *πλείων* = more). Where there were nearly or less than half, it was *Miocene* (*μειώ- less*). Where there were not only less than half, but so few as merely to suggest the *dawn* of the present Fauna and Flora, it was *Eocene*. Pleistocene (Gr. *επιπλέον* = most) and Post-Pliocene have since been engrafted on this stock, denoting the beds in which the extinct species are so few and exceptional as to give us the exact opposite of the Eocene period, i.e. the wane of the extinct Fauna and Flora.]

In Geology. Oldest group of the tertiary formation.

We trace the progressive diminution of the existing species of gastropodous Mollusca by their fossil shells through the descending strata of the tertiary periods of geology, beyond which such indications become very doubtful and obscure. In the oldest tertiary deposits, not more than three and a half per cent. of the remains of any class of Mollusca have been identified with species now living. From this fact, which indicates the dawn of the existing state of the testaceous fauna, the term *Eocene* is applied to these strata: in the superimposed or Miocene tertiary beds there are about seventeen per cent. of fossil shells, identical with recent species; in the deposits of a third or Pliocene era from thirty-five to forty per cent.; and, in still more modern Pleistocene formations, the older tertiary shells have almost disappeared, and the number of species identical with those now living is from ninety to ninety-five per cent.—*Owen, Lectures on Comparative Anatomy*, lect. xviii.

Æolian *adj.* [Lat. *Æolus* = god of the winds.] Specially applied to a musical instrument, the chords of which vibrate under the simple action of the wind.

From poetry and music united, we have a right to expect pathos, sentiment, and melody, and in a word every gratification that the tuteal ear can bestow. But in sweetness of tone the best singer is not superior, and scarcely equal, to an *æolian* harp,

to Vischer's luthney, or to Giardini's violin.—*Dentlie, Essay on Poetry and Music*, pt. I.

Æolipile *s.* [Lat. *pila* = ball.] Ball or sphere in which water is heated, and from which the rarefied air escapes through a pipe.

Considering the structure of that globe, the exterior crust, and the waters lying round under it, both exposed to the sun, we may fitly compare it to an *æolipile*, or an hollow sphere with water in it, which the heat of the fire rarefies, and turns into vapours and wind.—*T. Horne, Theory of the Earth*.

Æp-, Æph-, Æpi-. Three forms taken by the Greek preposition, *ἐπὶ* = on, upon; the first being used before a vowel, the second before an aspirate, and the third before a consonant. Its proper power in composition is adverbial, in which case it has considerable latitude of import, meaning not only superposition, but addition.—Epicyle, for instance, meaning not anything *on a cycle*, or circle, but a *cycle*, or circle, *in addition*. Hence, by an easy transition, it takes the power which it has in *Epilogue*, —an address *after*, as opposed to a *Prologue*, or address *before*, a dramatic representation.

Prologues and Epilogues are *λόγος* which precede or follow something else; and not something that precede or follow a *λόγος*. If they were this, the construction would be prepositional. Is it *ever* so? On the first view it seems hazardous to ignore such an example as *epitaph*, which so evidently means something *on a tomb*, rather than a *tomb on, or superficial to, or in addition to*, anything else. But as the origin of the word is in the adjective *ἐπιτάφιος*, rather than in *ἐπί-τάφος*, the prepositional character is doubtful; and *epitaph* is the most plausible example that can be given. *Epidermis* = a skin on a skin, and *Epiphyte* = a plant on a plant, are merely curious from their apparent ambiguity.

Æpat *s.* [Gr. *ἐπατός* = brought on; from *ἐπὶ* on, *αἶμα* = lead.] See extracts.

As the cycle of the moon serves to show the *æpacta*, and that of the sun the diurnal letter, throughout all their variations; so this Dionysian period serves to show these two cycles both together, and how they proceed or vary all alone, till at last they accomplish their period, and both together take their beginning again, after every 5322 years.—*Holler, Diacronica concerning Time*.

A number, whence we take the excess of the common solar year above the lunar, and thereby may find out the age of the moon every year. For the solar year consisting of 365 days, the lunar but of 354, the lunations every year get 11 days before the solar year; and thereby, in 19 years, the moon completes 20 times 12 lunations, or gets up one whole solar year; and having finished that circuit, begins again with the sun, and so from 19 to 19 years. For the first year afterwards the moon will go before the sun but 11 days; the second year 22 days; the third, 33 days; but 30 being an entire lunation, cast that away, and the remainder 3 shall be that year's *æpact*, and so on, adding yearly 11 days. To find the *æpact*, having the prime or golden number given, you have this rule:—

Divide by three; for each one left add ten;

Thirty reject: the prime makes *æpact* then.

Harrie.

Æpagoge *s.* (the final *c* sounded.) See Induction.

Æpagio *adj.* [Gr. *ἐπαγωγή*; from *ἐπὶ* = on, and *αἶμα* = lead, bring.] Inductive; the two words nearly translating each other. See Induction.

Æpaulet *s.* [Fr. *épaulette*; which formerly signified the wing of a gown, douillet, &c.] Ornament for the shoulder; shoulder-knot.

fac'd and lined with a wall, designed to cover the cannon of a bastion.—*Harrie*.

Æpœtic *adj.* [Gr. *ἐπαιρητικός*; *ἐπαιρέω* = praise.] Laudatory; panegyric. *Rare*.

In whatever kind of poetry, whether the epic, the dramatic, . . . the *æpœtic*, the heroic, or the epigram.—*Phillips, Theatrum Poeticum*, prol.

Æphéméral *adj.* [Gr. *ἐπι-εἶναι*, for, *ἡμέρα* = day.] Diurnal; beginning and ending in a day; short-lived.

This was no more than a mere bubble or blast; and like an *æphéméral* fit of applause.—*Sir H. Wotton, Life of Duke of the Buckingham*.

Æphémérides *s.* [from *æphéméria*, being in fact the plural of it; though formerly *æphémérides* was used as a noun of the singular number.] Astronomical tables showing the state of the heavens for every day at noon.

Let him make an *æphémérides*, read Suicet, the calculator's works, Scander be eundemque temporum, and Petrus his adversary, till he understand them.—*Barton, Academy of M. Church*, p. 251.

In the *singular*. Account of the daily motions and situations of the planets.

When casting up his eyes against the light,
Both month, and day, and hour he measur'd right;
And told more truly than the *æphémérides*:
For art may err, but nature cannot miss.

Druides, Nua's Tale.

Æphémérist *s.* One who, consulting the stars, or studying either Astronomy or Astrology, uses an Ephemeris or Ephémérides.

Æphémérous *adj.* Beginning and ending in a day.

The *æphémérous* tale that does its business, and dies in a day.—*Dickens, Reflections on the French Revolution*.

An old word revived by Burke. 'An *æphémérous* monster' occurs in Annotations on Glanville, &c., in 1682, p. 12.—*Gold*.

Æphésian *s.* [*Ephesus*—the Asiatic city so called.] In the time of Shakespear this was a familiar term, the import of which is not exactly explained.

Speak from thy lines military; art thou there?
It is thine host, thine *Æphésian* calls.—*Shakespear Merry Wives of Windsor*, iv. 5.

The *æphiatos*, or night mare, is called by the common people witch-riding. *Brind, Observations on popular Antiquities*.

Æphod *s.* [Hebrew.] Ornament worn by the Hebrew priests.

He made the *æphod* of gold, blue, and purple, and scarlet, and fine twisted linen.—*Exodus*, xxxii. 2.

Which hang on herbs and flowers. *O. Sandys*.

Æpic *adj.* [Gr. *ἐπικός*; Lat. *epicus*; Fr. *épique*, from Gr. *ἔπος* = word, heroic poem.] Heroic, as applied to a poem.

Holmes, whose name shall live in *æpic* song,
While music numbers, or while verse has feet.

Druides.

The *æpic* poem is more for the manners, and the tragedy for the passions.—*Id.*

Æpio *s.* Epic poem.

He [Mr. M'Pherson] brought forward his counter-fet *æpics*, [the alleged poems of Ossian], whose manifold defects and deformities were not so much pardoned for the beauties, thinly scattered, which they contained, as from the persuasion that they were the works of an ancient artist.—*Campbell, On the Ecclesiastical and Literary History of Ireland*, p. 170.

Æpicéde *s.* [Gr. *ἐπιτάφιος* (*ἐπὶ* = on, *ἐπὶος* = funeral solemnity); Fr. *épicede*; Lat. *epicedium*; which is, itself, sometimes used.] Funeral discourse or song.

We are yet in hope of somewhat to come forward, to the illustrious glory of the land, namely his worthy works de Antiquitate Britannica, et de illustribus viris, with lxxv. elegrams and *æpicédes*.—*Idem, Dedication of Ireland's Itinerary*, 1550.

Æpicédes and obsequies upon the death of sundry personages.—*Donne, Poems*, p. 260.

Epicedian. *adj.* Relating to, consisting in, or constituted by, an Epicede; elegiac; mournful. *Rare.*

[The *epicedian* song [is] a song sung ere the corpse be buried. *Cockerham.*]

Epiceus. *adj.* [Lat. *epiceus*, from the Gr. *epiceus* = common.] Common; of both kinds; (chiefly used in *Grammar*, in which case it applies to those names of animals which are the same for both sexes. It is the name of a play of Jonson's (*Epiceus*, or the Silent Woman) in which the point lies in the fact of a man passing for a woman. It is sometimes, also, applied to cunuchs and hermaphrodites.)

Of the *epiceus* gender bees and stiles,
Amplidion Archy is the chief.

B. Jonson, Masques.

All pretty fellows are also extended to a man, as well as all humors, or persons of the *epiceus* gender, who gaze at one another in the presence of ladies. — *Tulley*, no. 27.

Epiceus. *s.* Follower of Epicurus; one given wholly to luxury.

Then fly false thames,
And mingle with the English *epiceus*.

Shakespeare, Measure for Measure, v. 3.

Epiceusian. *s.* One of the sect of Epicurus. Certain philosophers of the *epiceusian* and of the stoicks encountered him. — *Idem*, xvii. 18.

I kept but a man and a maid ever ready to stander and steel;
I know it and smile a hardest smile, like a stoic, or

A wiser *Epiceusian*, and let the world have its way.
Tranquon, Maud, iv. 4.

Epiceusian. *adj.* Pertaining to the sect of Epicurus. Academics old and new, with those Sarmaned Vertipeticks, and the sect *Epiceusian*. — *Milton, Paradise Regained*, iv. 278.

2. **Luxurious;** contributing to luxury.

The up the liberality in a field of cows,
Keep his brain fuming; *epiceusian* and fast,
Sharpen with cholerous sauce his appetite.

Shakespeare, Antony and Cleopatra, ii. 1.

This ignominious dissoluteness, or rather, if we may venture to designate it by the only proper word, lackeardism of feeling and manners, could not but spread from private to public life. The cynical sneers, the *epiceusian* sophistry, which had driven honour and virtue from one part of the character, extended their influence over every other. — *Mansel, Critical and Historical Essays, Italian's Constitutional History*.

Epiceusian. *s.*

1. **Luxury;** sensual enjoyment; gross pleasure.

The darts of devilment, *epiceusian*, and unmercifulness. — *Bishop of Chichester, Two Sermons*, ser. i. viii. : 1576.

Make it a tavern or a brothel.

Shakespeare, King Lear, i. 4.

There is not half so much *epiceusian* in any of their most studied luxuries, as a blessing fame at their mercy. — *Dr. H. More, Government of the Tongue*.

Some good men have ventured to call unchastity, the greatest sensuality, a piece of *epiceusian*. — *Catany, Sermons*.

2. **Doctrine of Epicurus.**

Idleness, or modern Deism, is little else but revived *epiceusian*, Sadducism, and Zendicism. — *Waterland, Charge*, p. 72 : 1732.

The first book of the Enquiry ends with a sentence far remote from Irreligion and *Epiceusian*. — *J. Walton, Essay on Pope*.

[The learned Waterland, to distinguish this more pointedly, writes the word *epiceusian*; and the recent on *epiceusian* in this sense, should be on the third syllable. The usage of the word is modern. Dr. Johnson takes no notice whatever of it. — *Idem*.]

Epiceusian. *s. u.* Become an epiceus, or have a tendency towards epiceusian (in any of its senses); devour like an epiceus; play the epiceus.

He thrifly improves the objects of his cruelty, spending them by degrees, and *epiceusian* on their pain. — *Fallax, Italy State*, p. 448 : 1618.

Those evil demons did, as it were, delicate and *epiceusian* in them. — *Balford, Melanconia*, p. 101.

Epiceusian. *part. adj.* Tending towards *epiceusian*.

The tree of knowledge mistaken for the tree of life. . . . *Epiceusian* philosophy, Antinomian liberty, under the pretence of free grace and a gospel spirit. — *Cudworth, Sermons*, p. 87.

Epicycle. *s.* [Gr. *epi* — on, *kyklos* — circle.] In ancient Astronomy. Smaller circle whose centre is in the circumference of a greater; circle round the circumference of which a planet was supposed to roll, while the centre was carried along a deferent, or larger circle, of which the earth formed the centre.

In regard of the *epicycle*, or lesser orb, wherein it moveth, the motion of the moon is various and unequal. — *Sir T. Browne.*

How they will wield
The mighty frame; how loud, unbridled, contrive
To save appearances; how kind the sphere
With centre and eccentric, scribbled over;
Cycle and *epicycle*, roll in orbit.

Milton, Paradise Lost, viii. 82.

We shall remark, however, that Ptolemy does not speak of the *epicycle* in which the ancients supposed the planets moved, as having any real existence, but only as a theory invented 'to save the appearances.' — *Shurpe, History of Egypt*, ch. xlii.

Epidemic. *adj.* [Gr. *epi* — on, *epi* — people; Fr. *epidémique*.]

1. In Medicine. Invading or attacking the occupants of a district as a disease or murrain, and passing from one country to another, whether by contagion or infection, or carried by the atmosphere. (In this their comparatively transitory character, the Epidemic diseases are contrasted with the Endemic, or those which from being connected with either the soil or certain local conditions, are fixed more or less permanently in the district.)

It was conceived not to be an *epidemic* disease, but to proceed from a murrain in the constitution of the air, lowered by the predispositions of seasons. — *Baron, History of the Reign of Henry VII.*

They could do nothing against the Insularians, owing to an unusually rainy season, which filling all the streams, made the country about the Palmyra-tiende, and occasional *epidemic* diseases among the soldiers. — *Arnold, History of Rome*, ch. xlii.

The few cases of cholera at Southampton, and the few little outbreaks at Epidine, may very probably not be the precursors of an immediate *epidemic* attack, but they are, or should be, a warning to all people, professional or other, to put themselves and their patients in a position of defence, and to furnish up the old and examine the new weapons by which it is proposed to meet the disease. The hint becomes the more significant from the marked similarity of the cholera-track of the present year to that which has on former occasions been followed, after a twelvemonth's interval, by a regular invasion of *epidemic* cholera. — *Saturday Review*, Oct. 21, 1845.

2. **Generally prevailing;** affecting great numbers.

He ought to have been bustled in losing his money, or in other unamusedly equally humble and *epidemic* among persons of honour. — *Swift*.

His [Lord Wharton's] rank and abilities made him conspicuous that in him we are able to trace distinctly the origin and progress of a moral taint which was *epidemic* among his contemporaries. — *Mansel, History of England*, ch. 22.

Epidemic. *s.* Epidemic disease.

The other fatal *epidemic*, such as the plague, yellow fever, and small pox, have been, in general, the murrains more particularly, though not exclusively, connected with large towns, camps, or other congregations of men. — *Idem, Cyclopaedia*, in voce.

Epidemic. *adj.* Same as Epidemic.

1. Applied to diseases. See Epidemic, 1.

As the proportion of acute and *epidemic* diseases shows the aptness of the air to sudden and vehement impressions, the chronic diseases show the ordinary temper of the place. — *Gravet, Observations on the Bills of Mortality*.

2. **General;** universal.

That great *epidemic* camel, wherein every one from the peer to the plebeian hath an inclusive vote. — *Hosack, Instructions for Foreign Travel*, p. 219 : 1812.

They're citizens of 'er world, they're all in all;
Scotland's a nation *epidemic*. — *Cleland*.

There seems to be some infamously *epidemic*. You direct yours to me in Mitre Court; my true address is Mitre Court Buildings. — *Lamb, Letter to Manning*.

Epidemiological. *adj.* Connected with, or relating to, Epidemiology.

Epidemiology. *s.* Doctrine of epidemic dis-

eases; method of investigating them. (This is given rather as the basis of the preceding than as a current word; the preceding being a word of recent coinage, as the name of the Epidemiological Society, instituted in 1843 for the investigation of the nature of epidemics.)

Epiderm. *s.* Epidermis; (in the following extract both forms are used.)

The integument in the non-banded parasites of the human subject, and in almost all the order, is more or less smooth; it consists of a thin connective *epidermis*, and of a fibrous corium firmly attached to the outer transverse muscular fibres. The *epiderm* is homogeneous; i. e. it does not show the nucleated cellular structure. — *Owen, Lectures on Comparative Anatomy*, lect. vi.

Epidermal. *adj.* Epidermic.

Its usual plan is to insinuate itself between the *epidermal* nucleations of the leaf, close to one of the veins. — *Kirby and Spence, Introduction to Entomology*, ii. 477. (Ord MS.)

The branch of anatomy which treats of the skeleton of vertebrate animals is designated Osteology, because in anthropology it relates exclusively to the bones and teeth. But the skeleton, according to its cytoskeletal constitution of hard and dry parts, must apply to the hair and nails, and, indeed, the entire *epidermal* system. — *Owen, Lectures on Comparative Anatomy*, lect. ii.

Epidermic. *adj.* Relating to, or connected with, the epidermis.

Epidermic [words] relating to the *epidermis*; *epidermic*, though introduced by Richard and in general use, is ill-constructed. It should be *epidermoid*. — *Hosack, Medical Dictionary*.

Epidermis. *s.* [Gr. *epi* — on, and *derma* = skin.] Cuticle; scarf-skin.

It [the skin of the negro] is more or less black according to the deposition of the pigment. . . . It is found in the common cells of the mucous layer of the *epidermis*, and not in special pigment cells, whilst the *derma* of the negro is like that of the European. . . . According to Florent's former opinion, there was said to exist between the *epidermis* and *derma* an organ absent in the white, which contained the coloring matter; he has, however, now adopted the prevailing opinion that there is no difference in the structure of the skin between white and black men, a deposition of pigment also taking place in the former, though in lesser quantity. . . . Krause says that freckles and brown nodes in the skin of Europeans are in structure like the *epidermis* of the negro. — *Hollander, Treatise on the Skin*, p. 1, ser. 2.

The clothing membrane, or *epidermis*, as it is called, varies much in texture in different plants, and even in different parts of the same plant. . . . It is the increased thickness and hardened texture of the *epidermis* which gives the leathery or woody leaves of evergreen plants their peculiar appearance and consistency, and enables them to withstand external influences so long. Young shoots, when they emerge from the bud, are clothed with a delicate *epidermis*. . . . The *epidermis*, in addition to its varied texture, presents us with a number of peculiar appendages. . . . of these . . . hairs are the most common. — *Holmes, Rudiments of Botany*, ch. I. sect. 5.

Epidermoid. *adj.* Resembling the epidermis. (For example see extract under Epidermis.)

Epigastrie. *adj.* Relating to, or constituted by, the upper part of the abdomen.

A minute portion of the small-pox virus introduced into the system, will, in a severe case, cause, during the first stage, rigors, heat of skin, accelerated pulse, hurried language, loss of appetite, thirst, *epigastrie* uneasiness, vomiting, headache, pains in the back and limbs, muscular weakness, convulsions, &c. — *Herbert Spencer, Lectures on Biology*.

Epigastrium. *s.* [Gr. *epi* — on, *gastri* = belly.] In Anatomy. Upper and middle part or region of the abdomen, nearly coinciding with the pit of the stomach.

Pathologists have divided the abdomen into certain regions. . . . These regions are marked out by means of imaginary lines, drawn in horizontal and vertical directions. The horizontal lines, four in number, divide this cavity into three zones. The highest of these lines pass over the xiphoid cartilage; the second, by the margin of the tenth rib; the third, by the anterior and superior spine of the ilia; and the fourth, by the superior margin of the pubis; thus giving three zones, the *epigastrie*, the umbilical, and the *hypogastrie*. For the sake of additional precision, each of these zones is divided into segments by vertical lines, also four in number. . . . The vertical lines, . . . dividing the horizontal lines very nearly at right angles, give us nine regions on the anterior and lateral aspects of the abdomen, and six posterior regions. The anterior regions are the *epigastrie*, umbilical, *hypogastrie*, and right and left inguinal; the lateral regions are the right and left *hypochondrie*, and right and left

line. . . The form of the abdomen, although necessarily in some measure changed by marked variation of its bulk, may, nevertheless, be much altered without any decided difference in its size. Thus, it is somewhat changed in severe diseases of the respiratory passages, when the entrance of air into the lungs is obstructed; the epigastrium and hypochondria being then pressed upwards and upwards.—*Cupland, Dictionary of Practical Medicine, Abdomen.*

Epiglottis. *s.* [Gr. *ἐπι* = upon, *γλωττις* = aperture of the windpipe.] In *Anatomy*, Cartilage which covers the aperture of the windpipe. (*Epiglottic* and *Epiglottidean* are derivatives.) *Technical* or *scientific*.

(For example see extract under *Larynx*.)

Epigram. *s.* [Lat. *epigramma*; from Gr. *ἐπι* = on, *γράμμα* = writing = Lat. *superscriptio*.] Verses ending in a point or sting.

A college of wits and wits cannot float me out of my liquor; dost thou think I care for a satire or an epigram?—*Shakespeare, Much Ado about Nothing*, v. 4.

What can be more witty than the epigram of Moore upon the name of Nicolson, an ignorant physician, that had been the death of thousands?—*Peacock, Of Poetry*.

I write

An epigram that boasts more truth than wit. *Gay*. His inventive was unimpaired and lived to be endured, although he was a less eminent master of sarcasm than his son, and rather overwhelmed his antagonist with the burst of words and vehement indignation, than wounded him by the edge of ridicule, or tortured him with the gall of bitter scorn, or fixed his arrow in the wound by the barb of epigram.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Lord Chatham*.

[In our old lexicography, 'epigram or superscription,' (Hollot.) Colgrave, nearly a century afterwards, retained, in his translation of the French *epigramme*, this classical meaning; calling it, 'a short poem, wittily taxing a particular person or fault; also a title, inscription, or superscription.' *Tidd*.]

Epigrammatic. *adj.* Suitable to, belonging to, constituted by, or having the character of, an epigram.

He is every where above conceits of epigrammatic wit and gross hyperboles; his minutiae majesty in the midst of jocosities; he shines, but glows not; and is stately, without ambition.—*Adams*.

He has more of those little points and puerilities that are so often to be met with in Ovid; none of the epigrammatic turn of Lucan; none of those swelling sentiments which are so frequent in Statius and Claudian; none of those vast embellishments of Tasso.—*Id.*

These things are far indeed from being unimportant. . . . They show upon what kind of grounds the fabric of a great man's professional fame, as well as the purity of his moral character, were assailed by the unimpaired violence of party at the instigation of their ignorance, skulking behind a signature made famous by epigrammatic language and the boldness of being venturesome in the person of a printer, who cannot by allowing dastardly slanders to act through him with a virtuous conscience.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III., Lord Mansfield*.

Epigrammatical. *adj.* Same as Epigrammatic.

Our good epigrammatical poet, old Geoffrey of Winchester, thinketh an ominous fore-speaking to lie in names.—*Chaucer*.

Epigrammatist. *s.* One who writes or makes epigrams.

Such a customer the epigrammatist Martial meets withal, one who, after he had walked through the fairest streets twice or thrice, chattering jewels, plate, rich luggings, came away with a wooden dish.—*Peacock*.

The epigrammatist [Martial] speaks the new their drunken principles.—*Jeffrey Taylor, Rule of the Holy Dying*, ii. § 1.

A jest upon a poor wit, at first might have had an epigrammatic for its father, and been afterwards gravely understood by some painful collector.—*Bope*.

Among the buffoon poets of this age, is also to be reckoned John Heywood, styled the epigrammatist; from the six centuries of epigrams, or versified jokes, which form a remarkable portion of his works.—*Craik, History of the English Language and Literature*, i. 431.

Epigraph. *s.* [Gr. *ἐπιγραφή*; Fr. *épigraphe*.] Title; inscription.

[Dr. Johnson gives the Greek anglicized in *epigrapha*, a word of four syllables, as he places the accent on the second. But I take *epigraph* to be an old English word, merely with the superfluous final *a*, as was

formerly common, and intended, like *paragraph* or *autograph*, to be pronounced in three syllables.—*Tidd*.]

Epilepsy. *s.* [Gr. *ἐπιληψία* = seizing, laying hold on.] Convulsion, or convulsive motion of the whole body, or of some of its parts, with a loss of sense; falling sickness; fits (in which sense the application of the word, in *Medicine*, is limited to those that depend upon disease of the brain, as opposed to *hysterical* and other fits of a less formidable character).

My lord is full into an epilepsy: This is the second fit. *Shakespeare, Othello*, iv. 1. Melancholy distempers are deduced from spirits drawn from that encephalium; the paroxysms from cholerick spirits, and the epilepsy from fumes.—*Sir J. Floyer, Prefatural State of the animal Humours*.

Epilepsy [is a] sudden loss of sensation and consciousness, with spasmodic contraction of the voluntary muscles, quickly passing into violent convulsive distortions, attended and followed by sleep, recurring in paroxysms often more or less regular. *Epilepsy* has been noticed by all the ancient writers; but by none so fully and accurately as by Aretæus. The sudden and frightful seizure of which it consists, induced them to refer it to supernatural causes; and hence originated several of the names which have been applied to it.—*Cupland, Dictionary of Practical Medicine*.

Epileptic. *adj.* Convulsed; suffering from, or subject to, epilepsy.

A plague upon your epileptic visage! Smile you my speeches as I were a fool? *Shakespeare, King Lear*, ii. 2.

Epileptic. *s.* Person afflicted with, or subject to, epileptic fits.

Epileptic ought to breathe a pure air, unaffected with any steam, even such as are very fragrant.—*Arbuthnot, On the Nature and Choice of Aliments*. With respect to the mental condition of epileptics during the intervals of their attacks, Dr. Reynolds concludes from his own observations: 1. That epilepsy does not necessarily imply any mental change. 2. That considerable intellectual impairment exists in some cases; but that it is the exception, and not the rule. 3. That women suffer more frequently and more severely than men. 4. That the commonest failure is loss of memory; and that this, if regarded in all degrees, is more frequent than integrity of that faculty. 5. That apoplexy is more often found preserved than injured. 6. That uterine mental changes are rare. 7. That depression of spirits and timidity are common in the male sex, but not in the female; that excitability of temper is found in both.—*Cupland, Dictionary of Practical Medicine*.

Epileptical. *adj.* Having the nature of, or disordered as by, an epilepsy; (*Epileptic* commoner).

In the previous use of some extant solemnities, he became frantic and epileptic.—*J. Spencer, Vanity of vulgar Prophecies*, p. 30: 1005.

Epilogium. *s.* [Gr. *ἐπιλογισμός*.] Addition in the way of chronological computation; excess in reckoning; intercalation. *Rare*.

Some reckon the epilogium from Cyrus; some from the seventh, others from the twelfth of Artaxerxes Longimanus; accordingly ending the weeks, some at the profanation of the temple by Antiochus, &c.—*Gressley, Ptolemy*, p. 156: 1650.

The Greek and Hebrew making a difference of two thousand years. . . . this epilogium must be deducted from the Hebrew, or superadded to the Greek.—*Ibid.*, p. 171.

Epilogical. *adj.* Having the nature of an epilogue.

These lines are an epilogical allusion to the last elegy.—*T. Warburton*, in his edition of *Milton's smaller Poems*.

Epilogize. *v. n.* [In the extract the *u* is intrusive, having been introduced either for the sake of preventing the *g* being sounded as *j*, or from the noun.] Speak an epilogue.

The dances ended, the spirit epilogized.—*Stage-Direction in Milton's Comus*.

Epilogize. *v. a.* Utter as an epilogue.

I was rude enough to interrupt the laugh of applause with which the charming companion of my new acquaintance was epilogizing his witty rallery.—*Student*, i. 135: 1750.

Epilogus. *s.* [Gr. *ἐπιλογος*; Lat. *epilogus*.] Poem or speech at the end of a play.

If it be true that good wine needs no bush, 'tis true that a good play needs no epilogue; yet to good wine they do use good bushes, and good plays prove the better by the help of good epilogues.—*Shakespeare, As you like it*, ii. epilogue.

Are you mad, you dog?

I am to rise and speak the epilogue.

Drayton, Tyrannick Love.

Epitaph. *adj.* Relating to, connected with, or produced in honour of, a victory. *Rare*.

The epits was in battle were carried in triumph, while an epitaphic song was chanted.—*T. Warburton, History of English Poetry*, dissertation. (Ord 38.)

Epitaphion. *s.* [Gr. *ἐπιτάφιος*, from *ἐπι* = upon, and *τάφος* = victory.] Song of triumph. *Rare*. They distinguish between the trisagion and epitaphion, or triumphal hymn.—*Christian Antiquities*, ii. 118.

I certainly did not mean, that the Saxon minstrels had ever sung a triumphal epitaphion on Heugob's massacre.—*T. Warburton, Roderick*, p. 60.

Epiphany. *s.* [Gr. *ἐπιφάνεια* = manifestation; from *ἐπι* = show.] Church festival, celebrated on the twelfth day after Christmas, in commemoration of our Saviour's being manifested to the world by the appearance of a star, which conducted the magi.

And through thy poor birth, where first thou glorified'st poverty, And yet soon after riches didst allow, By accepting kingly gifts in the Epiphany, Deliver, and make us to be holy men free.

Doane, Poems, p. 343.

From Christmas to Epiphany, the church's design, in all her proper services, is to set forth the humanity of our Saviour, and to manifest him in the flesh; but from the Epiphany to Septuagesima Sunday, especially in the four following Sundays, she endeavours to manifest his divinity, by recounting to us in the Gospels some of his first miracles and manifestations of his deity.—*Whately, National Illustration of the Book of Common Prayer*.

Epiphytal. *adj.* Epiphytic: (the latter the better word).

Of the epiphytal class only one is found so far north as South Carolina.—*Lindley, The Vegetable Kingdom*, *Orchidaceae*.

Epiphyte. *s.* [Gr. *ἐπίφυτον* = plant, thing growing.] In *Botany*, Plant growing on another. (There is some mustiness in the use of this word, as well as in that of *Parasite*. Sometimes the two are strongly contrasted: a *parasite* being a plant which not only grows on another, but absorbs and assimilates its juices so as to be fed or nourished by it; while an *epiphyte* simply grows on it. The distinction is convenient. In the extract, however, it is suggested that an *epiphyte* may find nourishment as well as support, it only being denied that direct nourishment is the special object of the attachment.)

Epiphytes do not grow in earth; apparently because the peculiar organization of their roots renders them impatient of leaving those parts covered; and they prefer the branches of a tree to rocks, not perhaps because of any peculiar food which they find on trees, but because wood is a bad conductor of heat, and because they find shade among branches, while rocks conduct heat more rapidly, and are exposed to more dryness or more wetness. If rocks are soft, shaded, and so placed as to be exposed to no sudden changes of temperature, then *epiphytes* will grow as well on them as on trees.—*London, Theory and Practice of Horticulture*, ii. ch. xv.

Epiphytic. *adj.* Having the nature of an epiphyte.

As the leaves [of the *Palmyra palm*] nearest the ground begin to decay from the larger trees, a portion of their stalks still remain attached to the trunk. Grasping these, convolvuli, honeysuckles, and other climbing plants, ascend in great variety, and clothe the palm with festoons of flowers and verdure. The cavities on the stem become also receptacles for *epiphytic* plants, which germinate and flourish there in infinite profusion.—*Sir J. E. Ravenel, Ceylon*, (d. ix. ch. vi).

Episcopacy. *s.* Form of church government consisting in the superintendence of one clergyman over others; bishopric as a body.

The bishops durst not contest with the assembly in jurisdiction; so that there was little more than the name of episcopacy preserved.—*Lord Clarendon, History of the Grand Rebellion*.

Prelacy itself cannot be proved by prescription, since episcopacy is not prescribed by any time whatsoever.—*Apliff, Paragon*, *Jaria*, *Amour*.

Hall, bishop of Norwich, had published a *Humble Remonstrance* in defence of *Episcopacy*, to which in 1641 five initiators, whose names [Stephen Marshall, Edmund Calamy, Thomas Young, Matthew Newnomen, William Spurrow] made the first letters of the

celebrated word *Simulcrum*, gave the answer. Of this answer, a confusion was attempted by the learned Cicer; and to the confusion Milton published a reply. — *Johnson, Lives of the Poets, Milton*. While Charles was opposing the people, Falkland was a resolute champion of liberty. He attacked Strafford. He even concurred in strong measures against episcopacy. — *Macaulay, Critical and Historical Essays, Falkland's Constitutional History*.

Episcopal. *adj.* [see Bishop.] Belonging to, or vested in, a bishop; constituted by the institution of bishops: (generally opposed to Presbyterianism).

Episcopal. *s.* Adherent to, or partism of, episcopacy: (Episcopalian commoner).

And the dissenting episcopate, perhaps discontented to such a degree, as upon some fair unhappy occasion, would be able to shake the throne of royalty which none can deny theirs to be. — *Swift, Letter on the Government Trial*, iv. 32. (Ord MS.)

Episcopalian. *adj.* Episcopalian.

Episcoparian. *adj.* Episcoparian. *Rare*.

Episcopate. *s.* Bishopric; office and dignity of a bishop.

Episcopacy. *s.* Survery; search. *Rare*.

If the censor, in his moral episcopacy, being to judge most in matters not answerable by writ or action, could not use an instrument so gross and badly as jurisdiction, he, how can the minister of the gospel manage the corpulent and secular trial of bill and process in things merely spiritual? — *Milton, Reason of Church Government*.

Épistole. *s.* [Fr.; from Gr. ἐπιστολή.] Incidental narrative, or digression in a poem, separable from the main subject, yet rising naturally from it.

The poem hath no other epistole than such as naturally arise from the subject. — *Addison, Spectator*. Of epistolae in the Paradise Lost, I think there are only two, contained in Raphael's relation of the war in heaven, and Michael's prophetic account of the changes to happen in this world. Both are closely connected with the great action; one was necessary to Adam as a warning, the other as a consolation. — *Johnson, Lives of the Poets, Milton*.

Faithfully adhering to the truth, which he does not suffer so much as an ornamental epistole to interrupt, and equally studious to avoid the boldness of poetry, it is not surprising that Handel should be little read. — *Hutton, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth centuries*.

Epistodic. *adj.* Contained in an episode; pertaining to an episode.

I discover the difference between the epistodic and principal action, as well as the nature of episode. — *Notes on the Odyssey*.

The first of our countrymen, however, who published a set of his own letters, though not in English, was Roger Ascham, who flourished about the time of the Reformation; and when that mode of writing had been cultivated by the best scholars in various parts of Europe, was reformed for the terseness of his epistolary style. — *T. Warton, History of English Poetry*, iv. 54.

Some, when they write to their friends, are all affection; some are wise and sententious; some shew their powers for efforts of genius; some write news, and some write secrets; but to make a letter without affection, without wisdom, without gaiety, without news, and without a secret, is, doubtless, the great epistolic art. — *Johnson, Letter to Mrs. Thrale*, Oct. 27, 1777. (Ord MS.)

Epistolic. *adj.* Same as preceding.

I have an epistolic dissertation on John Maletia (for so he should be called, not Maletia) in Dr. Mill's hands. — *Bentley, Letters*, p. 154.

(Ord MS.)

Like that doughty centurion Afranius in Lucian: who to imitate the noble Pericles in his epitaphical speech, stopping up after the battle to bewail the slain Severinus, falls into a pitiful condemnation to think of those easily sappers and drinking bangers, which he must now taste of no more. — *Milnes, Antiquaries upon a Defence of the Humble Roman's cause*.

Épithalamium. *s.* [Gr. ἐπιθάλμιον, from *ἐπι* = up, and *θάλμιον* = bed, — in Spenser, who also wrote a *Prothalamium*, the form is that of the original Greek, *Epithalamium*; in which case it is opposed to *Prothalamium*.] Nuptial song in praise of marriage, and of the bride and bridegroom.

The entire alimentary canal consists of three tunics, — an external, fine, membranous, or peritoneal layer; a compact muscular coat composed of a layer of longitudinal and a layer of circular fibres, most developed at the two extremities of the canal; and an internal mucous coat, the *epithétium* of which is thickest at the pharynx and the rectum. Between the muscular and *epithétal* coats, in the intestinal division, there is a white spongy layer of tissue, composed of aggregated cells, compared by Rembold to translucent clay, and which is sometimes the seat of gastric glands. . . . Uric acid has been detected in these [the Malpighian] tubes: they have no proper *epithétal* lining, but are filled with cells, disposed in rows: these cells contain nucleus and numerous fine granules, which impart a yellowish or greenish colour to the tubes. — *Urban, Lectures on Comparative Anatomy*, let. xvii.

Épithet. *s.* [Gr. ἐπίθετον (from *ἐπι* = on, and *τίθημι* = put, place); Fr. *épithète*.]

I all run with pilgrims, leaving the *épithet* of false, scandalous, and villainous to the author. — *Swift*.

Épithet, in the rhetorical sense, denotes not every adjective, but those only which do not add to the sense, but signify something already implied in the noun itself; as, if one says, 'the glorious sun' on the other hand, to speak of the 'rising' or 'setting'.

dian sun' would not be considered as, in this sense, employing an *epithet*. It is a common practice with some writers to endeavour to add force to their expressions by accumulating high-sounding *epithets*, denoting the greatness, beauty, or other admirable qualities of the things spoken of; but the effect is generally the reverse of what is intended.—*Wately, Elements of Rhetoric*, pt. iii. ch. ii. § 4.

Browne, Vulgar Errors*, p. 267. (Ord 318.)

Epitome. s. [Gr. *ἐπιτομή* (from *τίπτω* = I cut, *τομή* = cutting); Fr. *építome*.—In English the final *e* is sounded, so that the word is a quindrisyllable.] Abridgement; abbreviation; compendious abstract; compendium.

This is a poor *epitome* of yours, which, by th' interpretation of full time, may show like all your self.

It would be well if there were a short and plain *epitome* made, containing the most material heads.—*Lacke*.

Such abstracts and *epitomes* may be reviewed in their proper places.—*Watts, Improvement of the Mind*.

The intimate acquaintance with all the varieties of life forced on him by his position in the midst of a moving *epitome* of the world, which vividly reflected them all, failed to lurch him distrust or dissection.—*Telford, Memoirs of C. Lamb*.

Who did the whole world's soul contract, and draw

Into the glasses of your eyes;

Epitomize. v. n. Make an epitome or abstract.

But, above all, Alfred served in the great army of learning himself as a translator. His translations do not pretend to scrupulous accuracy; sometimes he expands to explain a difficulty, or inserts a fuller account from his own knowledge or from the report of travellers at his court; more often he *epitomizes* as if he were giving the truth of the paragraph that had just been read to him. *C. H. Pearson, The early and middle Ages of England*, ch. ii.

other parts of fishes; those on the eyes of the sprat and the gills of the salmon being the best known.

The *epizoon* are of distinct sexes: the male appears always to retain his freedom, and is perhaps no that account, singularly smaller than the female. . . . You will not infrequently find adhering to the eye of the sprat an *epizoon* or brucia. . . . The *epizoon* differ from one another in their mode of adhering to the fish they infest: some stick fast by a suckorial mouth; others by processes that grow from the head; but the most common mechanism of adhesion in this singular class is a circular sucker, developed upon the confluent extremities of a pair of obscurely jointed tubular feet. (The third thoracic limbs of the larva as in the Lernaeopoda of the slunk, the Arthropoda of the perch, and the Trachilinae of the eel.)—*Owen, Lectures on Comparative Anatomy*, lect. xiii.

Epizootic. adj. Epidemic disease attacking the lower animals.

It has been observed also, that shortly before, or during, or soon after the prevalence of these epidemic catarrhs, *epizootic* diseases have raged; various species of brutes, and of birds, have been extensively affected with sickness; while, on some occasions, prodigious swarms of insects have made their appearance.—*Watts, Lectures on the Principles and Practice of Physic*, lect. xlix.

Epoch. s. [Gr. *ἐποχή*; from *ἐπείχω* = stop, rest.] Time at which a new computation is begun; time from which dates are numbered; memorable period.

Time is always reckoned from some known parts of this sensible world, and from some certain *epochs* marked out to us by the nations observable in it.—*Lacke*.

Epocha. s. Same as preceding.

Moses distinctly computes by certain intervals, memorable years and *epochas*, or terms of time.—*Sir T. Browne*.

Time, by necessity compell'd, shall go Through scenes of war, and *epochas* of woe. *Prior*.

Epode. s. [Gr. *ἐπὶδωκ* = addition or supplement to an ode (ᾠδή) = song, lyric composition], supplementary ode.—the *-e* is advantageously retained, as the pronunciation is *epód*, not *epódal* as in derivatives from ᾠδὴ way.] An Anglicized form of the Greek *epode*, or of the Greek derived through the Latin, in which language the word is adopted. (The only English *epodes* which are other than this, belong to the so called *Pindaric* odes of the seventeenth century. See *Pindaric*.)

1. In the Greek sense. Stanza, following the Strophe and Antistrophe in lyrical poems, and concluding the metrical or musical system.

Eponym. s. [Lat. *eponymus*; Gr. *ἐπώνυμος*, from *ἐπώνυμ* = name.] As a word coming into current use in works on mythology and primitive history, it means the hypothetical individual who is assumed as the person from whom any race or tribe took its name, e.g. *Hellen* is an *eponym* of the *Hellenes*. (The Greek and Latin forms *Eponymos* and *Eponymus* (plural *eponymi*) both occur. *Eponymic*, *Eponymous*, and *Eponymy* are congniers.)

If the citizen lived so late a day that the attempt

to trace back his own line to its divine founder because presumption and, as he would still take refuge in the legends which traced the origin of his city, his tribe, or his clan, to some one of the glorious heroes who were free from the doom of oblige or death. Every country, every autonomous town, nay, even many a hamlet, thus had its *eponym* heroes. . . . The fifty sons of Lycogen supplied *eponyms* for as many Arcadian townships.—*Cassell, History of Times and Ages*, introd. p. 2 and note.

They could be somewhat prone to believe in *eponyms* that is, he had no objection to say that Italy was named after Italos, king of the Sicels.—*Thirl*.

Epyrnal. s. [Gr. *ἐπιρύς* = lofty, *ἄρνις* = bird: a coined word.—The enormous eggs of the bird to which it applies being well known, and no other name of a more English character being likely to become current, it is entered on the principle which admitted Hippopotamus, and which admits Dinornis and others. Its etymology is exceptionable, the *-y-* in *epyrn* being neither (*exactly*) the root, nor the connecting vowel. By an etymological fiction it would be convenient to spell it Epyrnis; *epi* = in excess, and *epyrn* being the bird of which the ornithological characteristics are in excess. The reasons for this are not purely etymological. Write *epyrn*, and chances are that it will be made a trisyllable, and the second syllable be sounded *-yarn*.] Bird so called.

The finest known egg of a bird is that of the extinct *epyrn* of Madagascar; . . . the contents are computed to equal those of six ostrich's eggs, and a hundred and forty-eight hen's eggs.—*Owen, Anatomy of Vertebrata*, ii. 241.

There is also moderation in toleration of fortune in every sort, which of fully is called *equability*.—*Sir T. Browne, The Idler*, vol. 188.

The style of Dryden is sustained with extraordinary ability on an *equable* line, from which he seldom much deviates, neither brilliant nor prosaic; few or no passages could be marked as impressive, but few are languid or mean.—*Hallam, Introduction to the Literature of Europe in the fifteenth, sixteenth, and seventeenth Centuries*, pt. iii. ch. v.

Equably. adv. In an equable manner; uniformly; in the same tenor; evenly; equally to itself.

A youthful Achilles may acquire skill in hurling the javelin under the instruction of a Chiron, though the master may not be able to compete with the pupil in vigour of arm. — *Whately, Elements of Logic*, pref.

Office of itself does much to equalize politicians. It by no means brings all characters to a level; but it does bring high characters down and low characters up towards a common standard. In power the most patriotic and most enlightened statesman finds that he must disappoint the expectations of his admirers. . . . On the other hand, power turns the very views of the most worst-his-adventurer, his selfish ambition, his sordid cupidity, his vanity, his cowardice, into a sort of public spirit. — *Macaulay, History of England*, ch. xxiv.

Equator. *s.* [Lat.] In *Geography*. A common extract. A proper, rather than a common, name; hence, generally preceded by the definite article.

By reason of the convexity of the earth, the eye of man, under the equator, cannot discover both the poles; neither would the eye, under the poles, discover the sun in the equator. — *Sir T. Browne, Vulgar Errors*.

On the other side the equator, there is much land still remaining undiscovered. — *Key, Wisdom of God manifested in the Works of the Creation*.

The equator on the earth, or equinoctial in the heavens, is a great circle, whose poles are the poles of the world. It divides the globe into two equal parts, the northern and southern hemispheres. It passes through the east and west points of the horizon; and at the meridian is raised as much above the horizon as is the complement of the latitude of the place. Whenever the sun comes to this circle, it makes equal days and nights all round the globe, because he then rises due east, and sets due west, which he doth at no other time. — *Harris*.

The phrase unstable *equilibrium* is one used in mechanics to express a balance of forces of such kind, that the interference of any further force, however minute, will destroy the arrangement previously subsisting; and bring about a totally different arrangement. Thus, a stick poised on its lower end is in unstable *equilibrium*; however exactly it may be placed in a perpendicular position, as soon as it is left to itself it begins, at first imperceptibly, to lean on one side, and with increasing rapidity falls into another attitude. Conversely, a stick suspended from its upper end is in stable *equilibrium*; however much disturbed, it will return to the same position.—*Herbert Spencer, First Principles*, ch. xiii. § 100.

Plural in -*as*.

In every diversely moving aggregate, there results a comparatively early dissipation of motions which are smaller and more resisted; followed by long-continuance of the larger and less-resisted motions; and so there arise dependent and independent moving *equilibria*. Hence also may be inferred the tendency to conservation of such moving *equilibria*; since, whenever the new motion given to the parts of a moving *equilibrium* by a disturbing force, is not of such kind and amount that it cannot be dissipated before the pre-existing motions (in which case it brings the moving *equilibrium* to an end) it must be of such kind and amount that it can be dissipated before the pre-existing motions (in which case the moving *equilibrium* is re-established).—*Ibid*.

Milton, Paradise Lost, ix. 61.

In like manner, when astronomy took the form of a speculative science, words were invented to denote distinctly the equinoxes thus introduced: the sun's annual path among the stars, in which not only solar, but also all lunar eclipses occur, was termed the ecliptic. The circle which the sun describes in his diurnal motion, when the days and nights are equal, the Greeks called the equinoctial (*αἰκινιακή*), the Latin astronomers the *equinoctial*, and the corresponding circle on the earth was the equator. The ecliptic intersected the *equinoctial* in the *equinoctial* points.—*Whewell, Novum Organum*, p. 262.

This he doth twice a year, about the 21st of March and 23rd of September, which therefore are called the vernal and autumnal *equinoxes*.—*Harris*.

'Twas now the month in which the world began,

The next question will be, whether it is more reasonable and more *équitable* that the minority should be bound by the act of the majority, or the contrary? The answer to this question is obvious. It is plainly most consistent with reason, that the continents of the majority should prevail and conclude the whole; because it is not so likely that a greater number of men should be mistaken, when they concur in their judgment, as that a smaller number should be mistaken. And this is likewise most consistent with equity; because, in general, the greater number have a proportionally greater interest that the purposes of the society should succeed well, and leave more at stake if those purposes should miscarry or be disappointed. — *Rothschild, Institutes of Natural Law*, ii, l. § 1.

Mr. Hallam appears to have begun with the reign of Henry the Seventh, as the period at which what is called modern history, in contradistinction to the history of the middle ages, is generally supposed to commence. He has stopped at the accession of George the Third, 'from unwillingness,' as he says, 'to excite the prejudices of modern politics, especially those connected with personal character.' These two *eras*, we think, deserved the distinction on other grounds.—*Macaulay, Critical and Historical Essays, Hallam's Constitutional History*.

Erbinum and *terbinum* . . . are the names given by Mosander to two new metals, the oxides of which accompany yttrium. When the solution of a salt of yttrium, as hitherto prepared, is mixed with successive small portions of alkali, a series of precipitates is obtained; of which the first, when heated to redness, becomes yellow or orange, the succeeding ones exhibit, when heated, a pale yellow, approaching to white, and the last remains quite pure when ignited. These latter appear to be the pure oxide of yttrium; whilst the first precipitates are composed chiefly of the oxide of *erbinum* with oxide of *terbinum* and yttrium, and, in the intermediate ones, oxide of *terbinum* predominates.—*Turner, Elements of Chemistry*, p. 402.

Erethism, in pathology, has been generally understood, since the time of Hippocrates, as implying a state of irritation or excitement of a part, different from, or short of, the inflammatory condition, although often passing into it. . . . Many modern pathologists employ it as synonymous with *excess*, or simply an exalted state of the vital actions of a part; and others attribute to it more of a morbid import, viewing it as an early stage, and lesser grade, of many acute diseases, especially those that are febrile or inflammatory. The most familiar illustration of this state, according to the former class, is the act of blushing. According to the latter class, the ravenous appetite attendant sometimes upon debility and various affections of the digestive organs, proceeds from *erethism* of these parts, or, in other words, from an exalted state of the nerves of the organ, with increased circulation and secretion or exhalation from the villous surface. — *Cupland, Dictionary of Practical Medicine*.

But wheat, rye, or any other grain, either similarly diseased, or prematurely cut down, or damaged by the mode of keeping, . . . will occasion dangerous diseases. . . . —*Byron, Prophecy of Dante*, III.

Erythema, s. [Gr.] In *Medicine*. Morbid redness of the skin, terminating in sores and occasionally in gangrene; rash. (*Erythematos* is a derivative.)

The varieties of *erythema* and of *erysipelas* have been confounded together by many writers, a circumstance almost unavoidable, when it is considered that several states of the one are merely modifications of certain forms of the other; distinctions between them being rather conventional and artificial, than essential, distinct, and invariable. —*Copland, Dictionary of Practical Medicine*, in voce.

Escuage. s. [Fr. *escu* = shield.] See extract.

Escuage, that is, service of the shield, is either uncertain or certain. *Escuage* uncertain is likewise two-fold: first, where the tenant by his tenure is bound to follow his lord, going in person to the king's wars so many days. The days of such service seem to have been rated by the quantity of the land so holden; as, if it extend to a whole knight's fee, then the tenant was bound thus to follow his lord forty days. A knight's fee was so much land as, in those days, was accounted a sufficient living for a knight; and that was six hundred and eighty acres, as some think, or eight hundred as others, or 150 per annum. Sir Thomas Smith saith, that common *esquestra* is 400 revenue in free lands. If the land extend but to half a knight's fee, then the tenant is bound to follow his lord but twenty days. The other kind of this *escuage* uncertain is called *Castleward*, where the tenant is bound to defend a castle. *Escuage* certain is where the tenant is set at a certain sum of money, to be paid in lieu of such uncertain services. *Cumell*.

Escuage, which was the commutation for the personal service of military tenants in war, having rather the appearance of an indulgence than an imposition, might reasonably be looked by the king. It was not till the charter of John that *escuage* became a parliamentary assessment; the custom of commutation service having grown general, and the rate of commutation became variable. Some but military tenants could be liable for *escuage*. *Hallam, View of the State of Europe during the middle Ages*, ch. viii. pt. 2.

Esculent. adj. [Lat. *esculentus*.] Good for food; eatable.

I knew a man that would fast five days; but the same man used to have continually a great weed of herbs that he smelled on, and smelt *esculent* herbs of strong scent, as carlick. *Bacon*.

Since the truths we are to attend to are scientific truths, governed by precise and homogeneous relations, we must not found our scientific classification on casual, indefinite, and unconnected considerations. We must not, for instance, be satisfied with dividing plants, as Dioscorides does, into aromatic, *esculent*, medicinal and vinous; or even with the late prevalent distribution into trees, shrubs, and herbs; since in these subdivisions there is no consistent principle.—*Whitell, History of Scientific Ideas*, ii. 115.

Esculent. s. That which is esculent.

This cutting off the leaves in plants, where the root is the *esculent*, as radish and parsnips, it will make the root the greater, and so it will do to the heads of onions; and where the fruit is the *esculent*, by strengthening the root, it will make the fruit also the greater.—*Bacon, Natural and Experimental History*.

Escutcheon. s. [N.Fr. *escusson*; Lat. *scutum* = shield.] Shield of a family; picture of the ensigns armorial; hatchment affixed to a mansion.

There is now, for martial encouragement, some degrees and orders of chivalry, and some remuneration perhaps upon the *escutcheons*.—*Bacon, Essays*.

Escutcheon is a French word, from the Latin *scutum*, better; and hence cometh our English word *hatchment*, lethe in the old Saxon signifying better, and back or back a hack or stag; of whose skins, quilted close together with horn or hard wood, the ancient Britons made their shields.—*Peacham*.

Spelt escocheon.

The addition of the *escocheon* of Edward the Confessor to his own, although used by the family of Norfolk for many years, and justified by the authority of the heralds, was a sufficient foundation for an impeachment of high treason.—*T. Warton, History of English Poetry*, iii. 2.

messages upon such other's desk: one directs to
Dewey Goodenough, *esquire*; to which the other re-

respect! In a word, it is now 'populus universum',
a people of *esquires*. — *Tuller*, no. 10.

The houses of the gentry were not more plenti-
fully supplied. Few knights of the shire had *esquires*
as good as may now perpetually be found in a
servant's hall, or in the back parlour of a small shop-
keeper. An *esquire* passed among his neighbours
for a great scholar, if Hudibras and Baker's Chroni-

ele, Tarlton's Jests and the Seven Champions of Christendom, lay in his hall among the fishing rods and fowling pieces.—*Marsden, History of England*, ch. iii.

Esquire. *v. a.* Attend as an esquire: (a colloquial expression, in the last century, denoting a gentleman attending a lady in public; and of much the same value as the ridiculous *chaperon* of the present day).

They make the dignity of *esquireship* successor.

No arts essay'd, but not to be admired.
Pope.

2. Make experiment of; (especially) try the value and purity of metals; assay.

The standard in our mind being now settled, the rules and methods of *assaying* suited to it should remain unvariable.—*Locke.*

Fruitless our hopes, though pious our *assays*;
Yours to preserve a friend, and mine to praise.

In 1722 he (Johnson) was almost entirely occupied with his Dictionary. The last paper of his Rambler was published March 2, this year; after which, there was a cessation for some time of his talents as an *essayist*.—*Boswell, Life of Johnson.*

Essence. *s.* [See Existence.]

1. Distinctive nature of a being or substance.

See last extract.

One thinks the soul is air; another, fire;
Another, blood diffus'd about the heart;
Another saith, the elements conspire,
And to her *essence* each doth give a part.
Sir J. Davies.

I could wish the nature of a spirit were more unknown to me than it is, that I might believe its existence, without meddling at all with its *essence*.—*Dr. H. More, Divine Dialogues.*

He wrote the nature of things upon their names; he could view *essences* in themselves, and read forms without the comment of their respective properties.—*North, Sermons.*

Essence is but the very nature of any being, whether it be actually existing or no: a rose in winter has an *essence*; in summer it has existence also.—*Watts, Logic.*

In the Aristotelian philosophy, Genus and Difference are of the *essence* of the subject; by which, as we have seen, is really meant that the properties signified by the genus and those signified by the difference, form part of the connotation of the name denoting the species. Proprium and Accident, on the other hand, form no part of the *essence*, but are predicated of the species only accidentally. Both are accidents, in the wider sense in which the accidents of a thing are opposed to its *essence*;

though, in the doctrine of the predicable, Accident is used for one sort of accident only, proprium being another sort. Proprium, continue the schoolmen, is predicated accidentally, indeed, but necessarily; or, as they further explain it, signifies an attribute which is not indeed part of the *essence*, but which flows from, or is a consequence of, the *essence*, and is, therefore, imperially attached to the species; e.g. the various properties of a triangle, which, though no part of its definition, must necessarily be possessed by whatever comes under that definition.—*J. N. Mill, System of Logic*, b. ii. ch. vii. § 7.

2. Formal existence; that which makes anything to be what it is.

The visible church of Jesus is one in outward profession of those things, which supernaturally appertain to the very *essence* of Christianity, and are necessarily required in every particular Christian man.—*Hooker, Ecclesiastical Polity.*

3. Existence; quality of being.

In such cogitations I stood, with such a darkness and heaviness of mind, that I might have been persuaded to have resigned my very *essence*.
Sir P. Sidney.

I would resign my *essence*, that he were
As happy as my love could fashion him.
Beaumont and Fletcher, Spanish Curate.

4. Being; existent person.

As far as gods, and heavenly *essences*
Can perish.
Milton, Paradise Lost, l. 139.

5. Species of existent being.

Here be four of you, as differing as the four elements; and yet you are friends: as for Empeds, because he is temperate, and without passion, he may be the fifth *essence*.—*Hecate.*

6. Constituent substance.

For spirits, when they please,
Can either sex assume, or both; so soft
And uncomposed in their *essence* pure;
Nor tied or manacled with joint or limb.

7. Cause of existence.

To save the powder from too rude a sale,
Nor let th' imprison'd *essence* exhale.

Essence. *v. a.* Perfume; scent. *Rare.*

Socrates himself, when he went to a feast, was content to be surrounded up and *essenced* in his jacket.

Thy manly scorn, avers to thou'st pump.
Shakespeare, Economy.

Essential. *adj.* [Lat. *essentialis*.]

1. Necessary to the constitution or existence of anything.

The discipline of our church, although it be not an *essential* part of our religion, should not be readily altered, as the very substance of our religion will be interested in it.—*Jansen.*

This power cannot be finite and *essential* to matter; and if it be not *essential*, it is consequently most manifest it could never supervene to it, unless impressed and infused into it by an immaterial and divine power.—*Bentley.*

And if each system in gradation roll,
Alike *essential* to th' numbering whole,
The least confusion but in one, not all
That system only, but the whole must fall.

In *essentials* and fundamentals they agree, holding one faith.—*Bishop Montagu, Appeal to Caesar*, p. 113.

Essentiality. *s.* Essential nature or character; first or constituent principles.

The soul supplies the body in the *essentiality* of it and indispensable obedience.—*Jeremy Taylor, Ductor Dubitantium*, l. (Oril MS.)

I have sometimes wondered how a people, whose genius seems wholly turned to singing and dancing, and prating to vanity and impertinence; who lay so much weight upon modes and features, whose *essentialities* are generally so very superficial; who are usually so serious upon trifles, and so trifling upon what is serious, have been capable of committing such solid villainies; more untalented to the gravity of a Spaniard, or the silence and thoughtfulness of an Italian.—*Swift, Kriemler*, no. 33.

Essentially. *adv.* In an essential manner; by the constitution of nature; really; according to the true state of things.

Body and spirit are *essentially* divided, though not locally distant.—*Glauville.*

(Oril MS.)

Essoin. *v. a.* [N.Fr. *essoiner*.] In Law. Excuse; release.

Spenser, Faerie Queen.

She seems to have given a bad impression of her claims by putting in frequent *essoin*.—*C. H. Pearson, The early and middle Ages of England*, ch. xxxiii.

Used adjectivally.

Formerly the first general return day of the term was called the *essoin* day, because the court sat to receive *essoin*; but when *essoin* were no longer allowed to be cast, i.e. obtained, in personal actions, the court discontinued such sittings.—*Wharton, Law Lexicon*, in voce.

Now came into that general reformation, and bring in that establishment by which all men should be contained in duty.—*Spenser, View of the State of Ireland.*

The sacred order to which you belong, and even the establishment on which it subsists, have often been struck at; but in vain.—*Bishop Atterbury.*

An estafete was despatched on the part of our ministers at the Hague, requiring Marshal Bender to resign his march.—*Sir B. Doodley, Letter to the Right Honourable Edmund Burke, p. 84.*

Estato. *s.* [N.Fr. *estat*; modern form, *état*.]

1. General interest; business of the government; public.

Many times the things adduced to judgement may be means of ruin, when the reason and consequence thereof may reach to point of estate: I call matters of estate not only the parts of sovereignty, but whatsoever introduceth any great alteration, or dangerous precedent, or concerneth manifestly any great portion of people.—*Bacon, Essays.*

2. Condition of life, with regard to prosperity or adversity; condition; circumstances in general.

She accuses us to the king, as though we went about to overthrow him in his own estate.—*Sir P. Sidney.*

(Go, miser!) go: for here's all thy soul;
Thy wars for wars, and gudge from pole to pole,
That men may say, when thou art dead and gone,
How what a vast estate he left his son!

Dryden, Persius's Satires.
The most plausible distinction alleged by Spelman, that the heriot is by law due from the per-

sonal estate, but the relief from the heir, seems hardly applicable to that remote age, when the law of succession as to real and personal estate was not different.—*Hollan, View of the State of Europe during the middle Ages, ch. viii. pt. 1.*

I am indeed surprised at Bradly's position, that the English had suffered an indiscriminate deprivation of their lands. Undoubtedly there were a few left, in almost every county, who still enjoyed the estates which they held under Edward the Confessor, free from any superiority but that of the crown, and were denominated, as in former times, the king's thanes. Cospatrick, son perhaps of one of that name who had possessed the earldom of Northumberland, held forty-one manors in Yorkshire, though many of them are stated in Doomsday to be waste. Inferior freeholders were probably much less disturbed in their estates than the higher class.—*Ibid. ch. viii. pt. 2.*

2. Settle as a fortune.

Why hath thy queen
Summ'd me hither?
A contract of true love to celebrate,
And some dainties freely to estate.
On the black horse, Oh, how many a woman is a

This might hinder the prudent esteemer of his own parts, how useful it is to talk and consult with others.—*Locke.*

Esthetics. s. [Gr. *αισθητικα*, relating to *αισθησις* = perception. — see Chromatics.] This comparatively new word is German in respect to its derivation, i.e. if it had not been invented in Germany it would, probably, have had no existence in England. It began by meaning the doctrine of Perception in psychology generally. It was then limited to the doctrine of Taste, or the perception of beauty in art. For a further refinement see Callisthenics.

In the matter of form it is, however, by no means German, but Greek. The *e* in German, where the fiction of taking words of Greek origin through a Latin medium is not recognized, is *k*. The *u* or *o* German only partially coincides with the Greek *u* and Latin *e*. The German form, though spelt *ästhetik* or *ästhetik*, is sounded as though written *ästetik*; the adjectival derivative being *ästhetisch*, with a *e* of a wholly different origin. Neither is there in German any form ending in *s*. See also *Æ*. Theory of the criticism of beauty in art; doctrine of taste.

These general premises . . . form (or rather might form) a body of doctrine, which is properly the art of life, in its three departments, morality, prudence or policy, and *æsthetics*; the right, the expedient, the beautiful or noble, in human conduct and works. To this art (which, in the main, is unfortunately still to be created) all other arts are subordinate; since its principles are those which must determine whether the special aim of any particular art is worthy and desirable, and what is its place in the scale of desirable things. Every art is thus a joint result of laws of nature disclosed by science, and of the general principles of what has been called teleology, or the doctrine of ends, which, borrowing the language of the German metaphysicians, may also be termed, not improperly, the principles of practical reason.—*J. S. Mill, System of Logic, bk. iv. ch. ii. § 4.*

What does the astounding remark make of this little sentence from Schiller's *æsthetic letters*? . . . The *æsthetic letters*! Briefe über die *ästhetische Erziehung des Menschen*! in which this and many far deeper matters come into view, will one day deserve a long chapter to themselves. . . . We have already undertaken to present our readers, on a future occasion, with some abstract of the *æsthetic letters*, one of the deepest, most compact pieces of reasoning we are anywhere acquainted with: by that opportunity the general character of Schiller, as a philosopher, will best fall to be discussed.—*Cutcliffe, Critical and Miscellaneous Essays, Schiller.*

Whence may it proceed that you have a man educated and in all points equip, without ever coming upon certain wants which only philosophy can need? I am convinced it is entirely attributable to the *æsthetic* direction you have taken through the whole course. Within the *æsthetic* temper there arises no want of those grounds of comfort which are drawn from speculation; such a temper has self-satisfaction, has infinitude within itself; only when the sensual and the moral in man strive hostily together need help be sought of pure reason. A healthy poetic nature wants, as you yourself say, no moral law, no rights of man, no political metaphysics.—*Schiller, Extract from Correspondence, translated in the essay just quoted.*

Estimable. adj. Capable of being esteemed or estimated (in the good sense of the word); valuable; worthy of esteem, honour, or respect.

A pound of man's flesh, taken from a man, is not so estimable or vendible
As flesh of muttons, beefs, or goats.

every thing that was estimable and good.—*Sir W. Temple.*

The only way to come to a true *estimate* upon the odds betwixt a publick and a private life, is to try both.—*Sir R. L'Estrange.*

Outward actions can never give a just *estimate* of us, since there are many perfections of a man which are not capable of appearing in actions.—*Addison, Spectator.*

Upon a moderate *estimate* and calculation of the quantity of water now actually contained in the abyss, I found that this alone was full enough to cover the whole globe to the height assigned by Moses.—*Woodward.*

Estimation. s.

The colour is not in the eye, but in the *estimative* faculty, which mistakenly concludes that colour to belong to the wall, which indeed belongs to the object. *Huy.*

2. Approximately valued.

The honour I bear to this excellency in a wife moves me to rank her disposition, in the first place, as a jewel of the vermilioned richness, not *estimative* but intrinsic, that no other fail either of art or nature were to be sought out to set this forth.—*Sir C. Woodford, Instruction to his Son*, § 83: about 1640.

Estimator. s. Valuer; esteemer of things.

What man does in such a case, no equal estimator of things will impute to choice or malice.—*Jeremy Taylor, Ductor Dubitantium*, II. 513. (Ord. MS.)

If we were just *estimators* of things, it ought not to be less than a great uncommodity to the body which we mean to prevent by the loss of a spiritual benefit, or the omission of a duty. *Id., Great Exemplar of Sanctity and holy life.* (Ord. MS.)

Estival. adj. [Lat. *estivalis*, relating to, or connected with, (*æstas*) summer.]

1. Pertaining to the summer.

Let it be turned to a grove, or place of shade, or *estivation*.—*Bacon, Essays*, 13.

2. In *Holoty*. Arrangement in which the unexpanded leaves of the flower are presented in the bud (which burst in summer), as opposed to Vernalion or arrangement of the leaves of a branch (which burst in spring; Lat. *ver*).

The manner in which the flower-buds open, technically called their *estivation*, is a feature of some importance in distinguishing tribes of plants. The petals are sometimes so folded that their margins just meet—the *estivation* is then valvate; in some flowers they overlap each other like tiles—it is then imbricate; in other instances they are doubled inwards at the edges, or imbricate; while in many they are twisted or contorted. *Sowerby, British Wild Flowers*, introd.

Estop. v. a. In Law. Bar; place under estoppel.

If the party be indicted by a wrong name, and plead to that indictment by that name, he shall not be received after to plead misnomer, for he is estopped and *estopped* by his plea by that name.—*Sir J. Hale, Hist. de Plein. et Cour.*, p. ii. ch. xiv.

Estray. v. a. [N.Fr. *estraier*.] Stray; wander.

Estray. s. Creature wandered beyond its limits; stray.

Estray signifies any beast not wild, found within any lordship, and not owned by any man; for in this case, it being errant, according to law, in the market towns adjoining, if it be not claimed by the owner in a year and a day, it is the lord's of the soil. *Cowell*.

Soon after which the river swells into a great *estuary*, and in eight forms the Bristol channel.—*Skene, Tour of South Wales*.

The glaucous heads are so buoyant as to float lightly on the water, and the uppermost spines acting as sails, they are thus carried across narrow *estrures*, to continue the process of embanking on newly-formed sand bars. *Sir J. E. Tennant, Croydon*, pt. i. ch. i.

[It is indeed the self-same case
With those that swore of *cetera*.]

I have by me an elaborate treatise on the apocry-
phal called an *et cetera*, it being a figure much
used by some learned authors, particularly by the

observes, had a most admirable talent at an *et*.—

of the world eternal.

there of eternity that is found in this?—*T. Burnet,*
Theory of the Earth.

Eternally. *adv.* In an eternal manner.

Ether. *s.* [Gr. *αιηρ*; Lat. *aether*.]

1. Element more fine and subtle than air;
hypothetical atmosphere.

The parts of other bodies are held together by the
eternal pressure of the *ether*, and can have no other
conceivable cause of their cohesion and union.—
Locke.

The immaterial school could explain to
their own satisfaction how motions, once begun,
were transferred and modified; but in many cases
of the living frame there seemed to be a power of
beginning motion, which is beyond all mere me-
chanical action. This led to the assumption of a
principle of a higher kind, though still material.

Such a principle was asserted by Frederick Hoff-
mann. . . . According to him, the reason of the
greater activity of organized bodies lies in the in-
fluence of a material substance of extreme subtilty,
volatility, and energy. This is, he holds, no other
than the *ether*, which, diffused through all nature,
produces in plants the food, the secretion and ac-
tion of the juices, and is separated from the blood
and lodged in the brain of animals. From this,
acting through the nerves, must be derived all the
actions of the organs in the animal frame; for when
the influence of the nerve upon the muscle ceases,
muscular motion ceases also.—*Whewell, History of*
Scientific Ideas, ii. 184.

The prevailing hypothesis of a luminiferous *ether*,
in other respects not without analogy to that of Is-
cariot, is not in its own nature entirely cut off from
the possibility of direct evidence in its favour. It
well known that the difference between the calcu-
lated and the observed times of the periodical return
of Kerk's comet, has led to a conjecture that a
medium capable of opposing resistance to motion is
diffused through space. If this supposition should be
confirmed, in the course of ages, by the gradual ac-
cumulation of a similar variance in the case of the
other bodies of the solar system, the luminiferous
ether would have made a considerable advance to-
wards the character of a *vita ensa*, since the exist-
ence would have been ascertained of a great cosmi-
cal agent, possessing some of the attributes which
the hypothesis assumes; though there would still
remain many difficulties, and the identification of
the *ether* with the resisting medium would even, I
imagine, give rise to new ones. At present, however,
this supposition cannot be looked upon as more
than a conjecture; the existence of the *ether* still
rests on the possibility of deducing from its assumed
laws a considerable number of the phenomena of
light.—*J. S. Mill, System of Logic*, xiv. c. § 6.

2. Matter of the highest regions above.

There fields of field and liquid *ether* flow,
Purg'd from the pond'rous drags of earth below.
Dryden.

3. In Chemistry. Light and highly volatile
fluid resulting from the distillation of
alcohol with sulphuric acid.

The term *ether* originally applied to . . . the vola-
tile liquid produced by the action of sulphuric acid
upon common alcohol, is now extended to a large
class of compounds formed by the action of acids on
alcohols.—*Care, Dictionary of Chemistry*, in voce.

Ethereal. *adj.*

1. Formed of ether.

Man feels me, when I press th' *ethereal* plains.

Sent from whose sov'reign goodness I adore.

Thrones and imperial pow'rs, offspring of heav'n,
Ethereal virtues! *Ibid.*, ii. 310.

Such as these, being in great part freed from the
entanglements of sense and body, are employed,
like the spirits above, in contemplating the Divine
Wisdom in the works of nature: a kind of anticipa-
tion of the *ethereal* happiness and employment.—
Glanville.

Natures *ethereal*, human; angel, man. *Pope*.

Ethereous. *adj.* Ethereal.

Behold the bright surface
Of this *ethereous* mould, wherein we stand.
Milton, Paradise Lost, vi. 472.

Ethio. *adj.* Moral; delivering precepts of
morality: (whence Pope entitled part of
his works '*Ethick* Epistles').

Ethical. *adj.* Moral; treading on morality.

It is no narrow and narrowly circumscribed to say he
[Pope] is the great poet of reason, the first of *ethical*
authors in verse.—*T. Warton, Essay on Pope*.

In an *ethical* work, for instance, one may be
treating of virtue, while discussing all or any of
these questions: 'Wherein virtue consists?' 'Whence
our notions of it arise?' 'Whence it derives its
obligations?' &c.; but if these questions were con-
fusedly blended together, or if all of them were
treated of, within a short compass, the most judi-
cious and forcible arguments would lose their
interest and their utility, in so perplexed a com-
position.—*Whately, Elements of Rhetoric*, pt. i. ch. i. § 2.

The first original work of any reputation in *ethi-
cal* philosophy since the revival of letters, and
which, being apparently designed in great measure
for the clear of the confessional, serves as a sort of
link between the class of more esoteric and the phi-
losophical systems of morals, which were to follow,
is by Dominius Laë, a Spanish Dominican . . .
who played an eminent part in the deliberations of
the Council of Trent. *Hallam, Introduction to the*
Literature of Europe in the fifteenth, sixteenth, and
seventeenth centuries, pt. ii. ch. ix. sect. 1, § 2.

Ethically. *adv.* In an ethical manner; ac-
cording to the doctrines of morality.

My subject leads me not to discourse *ethically*,
but Christianity of the faults of the tongue.—*Dr. H.*
Mor., Discourses of the Tongue.

Law travels over much of the same ground as
ethics, and guides its course nearly according to
their dictates. If this be the case, then it is clear
that . . . the lawgiver has the same need to be *ethi-
cally* instructed as the individual man. . . . The law-
giver then, that is, the legislative mind of the na-
tion, must be *ethically* instructed; which implies
that it must be enlightened by religion, upon the
basis of which alone it is, that moral science can be
effectively reared.—*Gibson, The State in its Re-
lations with the Church*, ii. § 32.

Ethics. *s.* Doctrine of morality; system of
morality.

I will never set politics against *ethics*; for true
ethics are laid as a foundation to divinity and reli-
gion.—*Bacon*.

If the animals would live up to the *ethics* of
Epictetus himself, they would make few or no
progresses from the Christian religion.—*B. with g.*

The fourth book of Bacon's *Natural Organon* re-
lates to the constitution, bodily and mental, of man-
kind. . . . Logic and *ethics* are the grand divisions,
correlative to the reason and the will of man. . . .
It is here to be remarked that the sciences of logic
and *ethics*, according to the partition of Lord
Bacon, are far more extensive than we are accus-
tomed to consider them. Whatever concerned the
human intellect came under the first; whatever re-
lated to the will and the affections of the mind fell
under the head of *ethics*.—*Hallam, Introduction to the*
Literature of Europe in the fifteenth, sixteenth, and
seventeenth centuries, pt. ii. ch. ix. § 34.

The science of *ethics*, in the third quarter of the
seventeenth century, seemed to be cultivated by
three very divergent methods, by that of the theo-
logians, who went no further than revelations, or at
least than the positive law of God, for moral dis-
tinctions; by that of the Platonic philosophers, who
sought them in eternal and intrinsic relations; and
that of Hobbes and Spinoza, who reduced them all
to selfish prudence. A fourth theory, which, in
some of its modifications, has greatly prevailed in
the last two centuries, may be referred to Richard
Cumberland, afterwards Bishop of Peterborough.—
Ibid., pt. ii. ch. ix. § 13.

Ethiops. *s.* Native of Ethiopia, and, as
such, supposed to be black. A *proper*,
rather than a *common*, name, except in
combination. See next entry.

Ethiops. *s.* Old chemical name for several
black powders, e. g. *ethiops animalis*, ve-
getabilis, antimonioidis, per se, &c. (In all
or most of these, the second element of the
combination is Latin as well as the first:
when Anglicized it follows the substantive,
e. g. *ethiops mineral*, or sulphuret of mer-
cury.)

Ethmoid. *adj.* [Gr. *ἠμός* = sieve or sifter,
-μός = -like.] In *Anatomy*. Name of one
of the bones of the head: (called also *cribri-
form*, the Latin equivalent of ethmoid).

One horizontal plate receives the olfactory nerves, which perforate that plate with such a number of small holes that it resembles a sieve, whence the bone is named cribriform or ethmoid bone.—*Wagner, Medical Dictionary*, in voce.

ethnic. adj. Heathen; pagan; not Jewish; not Christian.

Such continually as the *ethnick* world durst not offer him, is the peculiar insolence of degenerated Christians.—*Dr. H. More, Government of the Tongue*.

I shall begin with the agreement of profane, whether Jewish or *ethnick*, with the Sacred Writings.—*Græc.*

ethnick. adj. [Gr. ἔθνικ.] Heathen; pagan.

Let I might seem to have no measure in raking up this *ethnick* dunghill, I will now leave the theology of the original of demons.—*Mede, Apology of the latter Times*, p. 10: 1651.

ethnism. s. Heathenism; paganism.

A hallowed temple, free from taint Of *ethnism*, makes his name a saint.

ethnics. s. Heathens; not Jews; not Christians.

The first Jupiter of the *ethnicks* was then the same Cam, the son of Adam.—*Sir W. Raleigh, History of the World*.

First, it is to be observed, that although the Jews and *Ethnicks* derided both the Apostles and the rest of the Christians, for preaching and believing in him who was crucified upon the cross; yet all, both Apostles and Christians, were so far from being discouraged from their profession by the ignominy of the cross, as they rather rejoiced and triumphed in it. *Revelational Constitution and Customs*.

ethnographer. s. Investigator in Ethnology.

ethnographic. adj. Relating to Ethnology.

ethnographical. adj. Same as Ethnographic.

ethnography. s. Same as Ethnology.

ethnological. adj. Pertaining to ethnology.

Between the extremes brought out by the above comparison lie subjects for *ethnological* notice of cranial diversity, seemingly inextinguishable.—*Queen, Anatomy of Vertebrates*, ii 564.

ethnologist. s. Investigator in ethnology.

To divide and classify all the races of man as we find them distributed over the face of the earth, after the manner in which we classify the lower animals in the wild state, is probably an achievement which the *ethnologist* will never accomplish. *Crawford, On the Civilization of Kava*, in *Transactions of the Ethnological Society*. (See also under Etymology.)

ethnology. s. [Gr. ἔθνος = word, principle.]

The study denoted by the term being comparatively new, it is the opinion of the editor that the exact import of it has yet to be definitely fixed. Nor is he certain that it will be determined on etymological principles; the chances being that the usage of the most important writers on the subject, rather than its theoretical merits, will fix it. In the translation of Heeren's *Researches upon certain Nations of Antiquity* εἶδος exactly coincides with the word *nation* its application being political. Thus, he says that history may be written either *ethnologically*, as the history of Greece, Rome, or England, or *synchronically*, as the history of the tenth or twelfth century. This is true; but the current meaning of the word translates εἶδος by *race* rather than *nation*; while *race* itself, when conjoined with *variety* and *species*, is a very indefinite term.

Ethnology, at present, means, in the first instance at least, the study, or science, of the varieties of man, or his natural (physical) history, with special reference to the manner in which one division of mankind differs from another. The present writer has contrasted it with Anthropology, or the investigation of the characteristics of man in general, as opposed to those of the lower animals; admitting that, as a general science for the two departments

thus coordinated, Anthropology would be, subject to two objections, a good term; perhaps the best. The objections are: (1) the want which would be thus created for some name for the section or division thus left unnamed, and (2) the little necessity, in a new study, for a term which would be vague rather than general. As it is, Ethnology has been extended beyond its original import. Hence, supposing it to become unduly general, it would be etymologically objectionable. But this is the case with Geometry as applied to anything beyond the simple measurement of the earth. Probably it would have been best for Ethnography to have kept its ground, and for Ethnology and Ethnography to have stood in the same, or nearly the same, relation to one another as Geography and Geology. Prichard used Ethnography in his earlier writings. In the earlier writings, too, of Crawford, Ethnology never occurs, while Ethnography is rare. The form in -logy was French, and took currency in England after the formation of the Ethnological Society, which, after the practice of societies in general, took the most comprehensive term it could find—a bad precedent. Even now, many of those who use Ethnology prefer to write Ethnographical, rather than Ethnological, philology; a matter which has often to be written about. In respect to their congeners, Ethnography (like Geography) gives Ethnographer; Ethnology (like Geology), Ethnologist.

To find that anthropology fifty and even three hundred and fifty years ago meant anatomy, while it now means the natural history of the human race, is of no more value than to know that the poetical English word Harbinger is derived from the very unpoetical word for a Dutch tavern-keeper; that Harbinger, designating a vintner of the vine, is a corruption of Allambro, that Jerusalem arti-choke.

For words, therefore, they we appeal to common sense. Any use of the three words under consideration would be good. It had no choice, and whether they are composed of the Greek words which signify man or people, and a writing or a discourse, seems in common sense a matter of perfect indifference. A safe title term, however carefully selected, will never contain the definition of a

Substantially, geography and geology have etymologically equivalent etimologies. As, I with astronomy and astrology, the one expressing a grand science and the other a great delusion. Chemistry and the search for the Philosophic stone have the same etymology. Of the three words, *ethnography*, *ethnology*, and *anthropology*, the most eligible is the one in most familiar use, and the shortest. They are all too long; and in this sense the last, which exceeds the two first, is the most inconvenient by a whole syllable, or, to use a commercial proverb, by twenty per cent. For ourselves, we should have preferred *ethnography* to *ethnology*. It was first employed nearly forty years ago by the late eminent Italian governmentist Bialli; whereas, the first use of the word *ethnology* was by the French as late as 1820, when they formed the Ethnological Society of Paris. A few years later, following the French, we established the Ethnological Society of London. In the troubles of the last French Revolution, the Ethnological Society of Paris, without becoming extinct, became moribund, and then a new Society was formed, which gave the first example of an Anthropological Society. This was the example which was imitated two years and a half ago in London.—*Ethnological Journal*, October, 1865, *Ethnography, Ethnology, and Anthropology*.

The fourth theme of anthropology is that of *ethnography* or *ethnology*, the object of which is an investigation into the attributes of various peoples and tribes. Closely allied with it is the history of mankind; and it seems arbitrary whether this branch of knowledge be considered as a separate part of anthropology, or belonging to *ethnology*.—*Translation* (by J. P. Collingsworth) of *Introduction to Anthropology*, by T. Watts: 1863.

ethnological. adj. Connected with, constituted by, constituting, or relating to, ethnology.

A science of ethnology founded on the laws of psychology, is therefore possible; though little has yet been done, and that little not at all systematically, towards forming it. The progress of this

important but most imperfect science will depend on a double process: first, that of deducing theoretically the *ethnological* consequences of particular circumstances of position, and comparing them with the recognised results of common experience; and secondly, the reverse operation; increased study of the various types of human nature that are to be found in the world.—*J. S. Mill, System of Logic*, vi. 5, § 8.

ethnology. s. See extracts.

The laws of the formation of character are . . . derivative laws, resulting from the general laws of mind; and are to be obtained by deducting them from those general laws; by supposing any given set of circumstances, and then considering what, according to the laws of mind, will be the influence of those circumstances on the formation of character. . . . A science is thus formed, to which I would propose to give the name of *ethnology*, or the science of character; from *ἔθνος*, a word more nearly corresponding to the term 'character' as I have used it, than any other word in the same language. The name is perhaps etymologically applicable to the entire science of our mental and moral nature; but if, as is usual and convenient, we employ the name psychology for the science of the elementary laws of mind, *ethnology* will serve for the ulterior science which determines the kind of character produced, in conformity to those general laws, by any set of circumstances, physical and moral. According to this definition, *ethnology* is the science which corresponds to the art of education; in the widest sense of the term, including the formation of national or collective character as well as individual. . . . The science of *ethnology* may be called the exact science of human nature; for its truths are not, like the empirical laws which depend on them, approximate generalizations, but real laws. . . . While on the one hand psychology is altogether, or principally, a science of observation and experiment, *ethnology*, as I have conceived it, is, as I have already remarked, altogether deductive. The one ascertains the simple laws of mind in general, the other traces their operation in complex combinations of circumstances. *Ethnology* stands to psychology in a relation very similar to that in which the various branches of natural philosophy stand to mechanics. The principles of *ethnology* are properly the middle principles, the 'axiomatica media' (as Bacon would have said) of the science of mind; as distinguished, on the one hand from the empirical laws resulting from simple observation, and on the other from the highest generalizations. — *J. S. Mill, System of Logic*, vi. 5, §§ 5, 6.

I would not here undertake to decide what ideal hypothetical or abstract sciences similar to political economy, may admit of being carved out of the general body of the social sciences; . . . social phenomena are in a sufficiently close and complete dependence, in the first resort, on peculiar class of causes, to make it convenient to create a preliminary science of those causes, postponing the consideration of the causes which act through them, or in concurrence with them, to a later period of the inquiry. There is however among these separate departments one which cannot be passed over in silence. . . . I allude to what may be termed Political *Ethnology*, or the theory of the causes which determine the type of character belonging to a people or to an age.—*Ibid.* vi. 9, § 3.

ethiolysis. s. [?] See extract.

Plants are sometimes affected by a disease which entirely destroys their verdure and renders them pale. This is called *ethiolysis*, and may arise solely from the want of the agency of light, by which the oxidation of oxygen is effected and the leaf rendered green. And hence it is that plants placed in dark rooms, or between great masses of stone, or in the clefts of rocks, or under the shade of other trees, look always peculiarly pale. But if they are removed from such situations and exposed to the action of light, they will again recover their green colour. *Ethiolysis* may also ensue from the depredations of insects feeding in the radicle and consuming the food of the plant, and thus debilitating the vessels of the leaf so as to render them insusceptible of the action of light.—*London, Encyclopedia of Gardening*, § 922.

ethiological. adj. Connected with, dependent on, or consisting in, Etiology. Its bearing upon the language of science, especially with reference to the prefix *pol-*, may be seen in the extract; also under Paleontology.

I have already stated . . . that the class of sciences which I designate as *palætiological* are those in which the object is to ascend from the present state of things to a more ancient condition, from which the present is derived by intelligible causes. A conspicuous example of this class we may take geology, glaciology, or comparative philology, and comparative archaeology. These provinces of knowledge might perhaps be intelligibly described as histories; the history of the earth, the history of the universe, the history of art. But these phrases would not fully describe the subjects we have in view. These sciences are to treat of causes as well as of effects. Such researches might be termed philosophical history; or,

In order to mark more distinctly that the causes of events are the leading object of attention, *etiological* history. But since it will be more convenient to describe this class of sciences by a single appellation, I have taken the liberty of proposing to call them the *paleontological* sciences. While *paleontology* describes the beings which have lived in former ages without investigating their causes, and *etiology* treats of causes without distinguishing historical from mechanical causation; *paleoetiology* is a combination of the two sciences; exploring, by means of the second, the phenomena presented by the first. The portions of knowledge which I include in this term are *paleontological etiological* sciences. All these sciences are connected by this bond;—that they all endeavour to ascend to a past state, by considering what is the present state of things, and what are the causes of change. . . . Another science, cultivated with great zeal and success in modern times, compares the languages of different countries and nations, and, by an examination of their materials and structure, endeavours to determine their descent from one another: this science has been termed *comparative philology*, or *etnography*; and by the French linguist, a word which we might imitate in order to have a single name for the science, but the Greek derivative glossology appears to be more convenient in its form. The progress of the heart (architecture and the like); how one stage of the culture produced another; and how far we can trace their nature and most complete condition to their earliest form in various nations;—are problems of great interest belonging to another subject, which we may for the present term *comparative archeology*. A philologist writer, in a very interesting work (Mr. Donaldson, in his *New Crælius*), expresses his dislike of this word, and suggests that I must mean *paleo-etiological*. I think the word is more likely to obtain currency in the more compact and euphonious form in which I have used it. It has been adopted by Mr. Waddington in his *Manual of Comparative Philology*, and more recently by other writers. — *Whewell, History of Scientific Ideas*, b. x. ch. i. and note.

Etiology. s. [Gr. *aitiologia*; from *aitia*—cause, and *logos*—word, principle.] Doctrine of efficient, as opposed to final, causes. See also *Teleology*.

The fourth way of amplification is by frequent *etiology*, or giving reasons for what we say. — *Instructions for Oratory*, p. 80: 1672.

I have not particulars enough to enable me to enter into the *etiology* of this distemper. — *Arbuthnot, On the Effects of Air on human Bodies*.

These modes by which one term in the natural series of events is derived from another, the forms of historical causation,—the kinds of connexion between the links of the infinite chain of time, are very various; nor need we attempt to enumerate them. But these kinds of causation being distinguished from each other, and separately studied, each becomes the subject of a separate *etiology*. Thus the causes of climate in the earth's surface, residing in the elements, fire and water, form the main subject of geological *etiology*. The *etiology* of the vegetable and animal kingdoms investigates the causes by which the forms and distribution of species of plants and animals are effected. The study of causes in glossology leads to an *etiology* of language, which shall distinguish, analyse, and estimate the causes by which certain changes are produced in the languages of nations; in like manner we may expect to have an *etiology* of art, which shall scrutinize the influences by which the various forms of art have given birth to its successor. — *Whewell, History of Scientific Ideas*, b. x. ch. i.

Etiquette. s. [Fr.; Gr. *epheo*—matters connected with morals.] System of rules, generally of an artificial character, for propriety of behaviour in society; rigid adherence to such; ceremony.

Without hesitation kiss the slipper, or whatever else the *etiquette* of that court requires. — *Lord Chesterfield*.

The Infanta Maria Josepha has reason to envy every country which she sees retaining its liberty; for confinement, *etiquette*, and civility, are likely to be her lot during life. — *Stauburne, Travels through Spain*, p. 328.

Etymologist. s. Etymologist.

Laws there must be; and 'lex à ligando' saith the *etymologist*; it is called a law from binding. — *Dr Griffith, Fear of God and the King*, p. 82: 1688.

Etymological. adj. Relating to etymology relating to the derivation of words.

Examine this conceit, this *etymological* observation. — *Locke*.

It is sufficient, in *etymological* inquiries, if the senses of kindred words be found such as may easily pass into each other, or such as may both be referred to one general idea. — *Johnson*.

Etymologist. s. One who investigates the derivation of words.

It may be, curious *etymologists* (let them love their wages who work in difficult trifles) seek to reap

what was never sown, whilst they study to make these words speak reason, which are only voices and pliancy imposed at pleasure. — *Fuller, History of the Holy War*, p. 108.

I close this section with an apology for Chaucer, Gower, and Cheshole; who are supposed by the *etymologists* to have corrupted the purity of the English language. — *T. Warton, History of English Poetry*, ii. 50.

Etymologize. v. a. Give the etymology of a word.

Breaches, quod bear-rieches; when a gallant bears all his riches in his breeches. — Most fortunately *etymologized*! — *B. Jonson, Cynthia's Revels*.

Etymology. s. [Lat. *etymologia*; from Gr. *etimos*—true, real, and *logos*—word, discourse.]

1. Descent or derivation of a word from its original; deduction of formations from the radical word; analysis of compound words into primitives.

Consumption is generally taken for any universal diminution and coagulation of the body, which accretion its *etymology* implies. — *Harvey, Discourses of Consumptions*.

When words are restrained by common usage, to a particular sense, to run up in *etymology*, and construe them by dictionary, is wretchedly ridiculous. — *Collier, Short View of the Immorality and Profaneness of the English Stage*.

Velvia is used by comick writers for a looking-glass, by which means the *etymology* of the word is visible, and pevelidra will signify a lady who looks in her glass. — *Addison, Spectator*.

If the meaning of a word could be learned by its derivation or *etymology*, yet the original derivation of words is oftentimes very dark. — *Watts, Logic*.

2. Part of grammar which delivers the inflections of nouns and verbs: (as opposed to Orthography and Syntax).

Etymon. s. Origin; primitive word.

Blue hath its *etymon* from the High Dutch blaw; from whence they call himmel-blue, that which we call sky-colour or heaven's blue. — *Peacock, On Drawing*.

The etymologist, therefore, whenever he were, hath deceived himself in ascribing the *etymon* of this word Assyria, while he foreth this distinction between it and Syria. — *Gregory, Quæstiones*, p. 170: 1650.

Eta. [Gr. *ē*—well.] Prefix in composition, suggesting the notion of goodness, its opposite being *dys*, as may be seen by the compounds beginning with that syllable.

Eucharist. s. [Gr. *euche*—grace.] Act of giving thanks; sacramental act in which the death of our Redeemer is commemorated with a thankful remembrance; sacrament of the Lord's supper.

Himself did better like of common bread to be used in the *eucharist*. — *Hooker, Ecclesiastical Polity*.

Some receive the sacrament as a means to procure great graces and blessings, others as an *eucharist* and an offer of thanksgiving for what they have received. — *Jeremy Taylor*.

From the litany let us pass to the fourth service, that of the holy communion. This service is most solemnly of a highly joyful character, and peculiarly adapted to music, for it is called by a name which no other part of the prayer-book bears—the *Eucharist*, which is 'giving thanks.' The parts of the communion service which are commanded by the rubrics to be sung (of course where there is a choir, so that they can be fully sung) are these:—First, the Nicene Creed, then the hymn, *Te Sanctus*, which begins, 'Holy, holy, holy, Lord God of hosts,' immediately before the consecration of the elements; and lastly, the hymn, *Gloria in Excelsis*, or *Gloria be to God on high*, which occupant the close of the service. — *Beaumont, Principles of the Book of Common Prayer*, considered in a Series of Lecture Sermons, sermon xiii.

Eucharistic. adj. Relating to the sacrament of the supper of the Lord; connected with thanksgiving.

The *eucharistic* bread being neither hypostatically united with the Divinity, nor being the medium through which any such supernatural tendency of the Divine Presence appears to us, adoration directed toward it cannot fail of being palpable idolatry. — *Dr. H. More, A Discourse against Idolatry*, ch. ii.

The Reformation awakened new controversies, or gave increased importance to old ones, concerning the *eucharistic* sacrament, the communion of the laity in both kinds, and the alleged substantial change and real presence in the consecrated elements; also as to the nature and operation of grace and good works, and the theory of original sin, re-

generation, justification, and predestination. — *Sir G. C. Lewis, On the Influence of Authority in Matters of Opinion*, ch. iv.

Eucharistical. adj. Same as Eucharistic. The act of this *eucharistical* supper. — *Bishop Hall, Brevium*, p. 201.

The latter part was *eucharistical*, which began at the breaking and adorning of the bread. — *Sir T. Browne, Vulgar Errors*.

It would not be amiss to put it into the *eucharistical* part of our daily devotions; we praise thee, O God, for our limbs and senses. — *Ruy, Wisdom of God manifested in the Works of the Creation*.

It is not, therefore, to be expected that a hundred years before his time our church music should have admitted movement enough to convey sentiments of gratitude and thanksgiving, though it might serve to accompany in slow and solemn tones the strains of penitence and supplication; and therefore Dr. Aldrich did judiciously in jettisoning the music, which was originally set to an *eucharistical* hymn of thanksgiving to a penitential one, to which it is evident, the suppository strain was much better adapted. — *Mason, Essays on English Church Music*.

Euchologe. s. [Gr. *euche*—word, principle.] Eucharology. Rare.

That it was so, will be easily evident from this recollection out of their own *euchologues*. — *Gregory*. (Ord. MS.)

He did not frame an entirely new prayer, in words of his own conception, but took out of the ancient *euchologia*, or prayer-books of the Jews, what was good and laudable in them. — *Bishop Hall, Works*, ii. 550.

Eucrasia. s. [Gr. *eukrasia*; *eukras*—temperature.] Well-proportioned mixture of qualities, on the strength of which a body is said to be in a good state of health.

The *eucrasia* or good temper of the body. — *Bishop Euclid, On the Passions*, ch. xxiv.

The *euchetical* or eucharistical offering must consist of three degrees, or parts; the offering of the heart, of the mouth, of the hand. — *Mede, Discourses upon Offerings*, b. i. disc. 40.

Eudiometer. s. • [Fr. *eudiomètre*; from Gr. *eûion*—clear sky, and *metron*—measure.] See extract.

Eudiometer is the name of any apparatus subservient to the chemical examination of the air. It means a measure of purity, but is employed merely to determine the proportion of oxygen. — *Enc. Dictionary of Arts, Manufactures, and Mines*, in voca.

Euhemerism. s. [Gr. *Eûhēmeros*, Lat. *Euhemerus*, an early speculator upon the origin of the polytheistic mythology of Greece, whose doctrine was that it arose exclusively, or in the main, out of the deification of dead heroes.] A proper, rather than a common, name, in respect to its origin, but used, especially in recent works on mythology, in a general sense. In the following extract spelt without the *h*. (*Euhemerism*, *Euhemerist*, and *Euhemeristic* are congeners.)

In this legend, as I have related it, Daphné is not enclosed bodily into a plant; and more than one reviewer has fastened on this version a charge of needlessly thrusting in a purely modern sentiment. My own writer it is spoken of as a piece of *euhemerism*; by another it is denominated as degrading the myth from a genuine to an artificial state. — *Cox, Tales of the Gods and Heroes*, p. 290.

Eulogically. adv. In a manner which conveys a eulogy; (Eulogistically commoner; and better, as showing the relation to eulogize rather than to the immediate congeners of Logic).

Give me leave *eulogically* to enumerate a few of those many attributes, which have deservedly been given that glorious planet. — *Sir T. Herbert, Relation of some Travels into Africa and the Great Asia*, p. 287.

Eulogist. s. One who eulogizes or praises; panegyrist; encomiast.

Such history was sure to find its *eulogist*. . . . The *eulogistic* language addressed to those holy beings raises our indignation. — *Buckle, History of Civilization in England*, vol. ii. ch. vii.

Eulogistic. *adj.* Having the character of a eulogy.

(For example see extract under preceding entry.)

Eulogium. *s.* [Lat. from Gr. εὐλογία.] Older form of Eulogy.

Notwithstanding the extravagant eulogium which you have heard of the French king's house, I will venture to affirm, that the king of England is better, I mean more comfortably lodged.—*Amulet, Travels through France and Italy.* (Ord MS.)

I shall not accompany those writings with eulogiums, but leave them to speak for themselves.—*Steele, Spectator*, in. 461. (Ord MS.)

Eulogize. *v. a.* Commend; praise.

Those Who eulogize their country's foes.

Many brave young minds have oftentimes, through hearing the praises and famous eulogies of worthy men, been stirred up to affect the like commendations.—*Spenser, View of the State of Ireland.*

If some men's appetites find more melody in discord, than in the harmony of the angelic quire; yet even these wild men may be affected with eulogies given themselves.—*Dr. H. More, Decay of Christian Piety.*

Eunuch. *s.* [Gr. εὐνοχος; Lat. eunuchus.] One who is castrated or emascinated.

It hath been observed by the ancients, that much of Venus doth dim the sight; and yet eunuchs, which are unable to generate, are nevertheless also dimmed.—*Bacon, Natural and Experimental History.*

They eunuch all their priests; from whence 'tis shown, That they deserve no children of their own.

Eunuchate. *v. a.* Make a eunuch. *Rare.* It were an impossible act to eunuchate or castrate themselves.—*Sir T. Browne, Vulgar Errors.*

Eunuchism. *s.* State of a eunuch.

That eunuchism, not in itself, but for the kingdom of heaven, is better than it, we doubt not; but when these two are reduced to their subjects their value is according to their use.—*Bishop Hall, Honour of married Clergy*, p. 64.

This voluntary eunuchism is not to be understood literally, as it was by Origen. *Treat of Epistola concerning Celibacy examined*, pt. II. 782.

Eupathy. *s.* [Gr. πάθος = suffering, passion, feeling.] Right feeling.

In *Laertius* we read recorded for a Stoic sentiment, that as the virtuous man had his πάθος, or perturbations; so, opposed to these, had the virtuous his εὐπάθεια, his eupathy or well-feelings, translated by *deeper countenance*. The three chief of these were Will, defined rational desire; Caution, defined rational aversion; and Joy, defined rational exultation. To these three principal eupathies belonged many subordinate species.—*Harris, Three Treatises*, note on *Treatise III.*

Euphpsy. *s.* [Gr. ψίπτε = cook, digest.] Good digestion. (*Euphpsy* the adjective. The compounds in *dys-* commoner.)

Akin to *litotes* is *euphemism*, which may be applied to the same purpose. When it is said of the martyr St. Stephen, that 'he fell asleep,' instead of he died, the euphemism partakes of the nature of metaphor, intimating a resemblance between sleep and the death of such a person. . . . A Roman expressing a strong dislike to a person or thing, would say 'valent,' for it well; which is a kind of ironical euphemism.—*Beattie, Elements of Moral Science*, § 300. (Ord MS.)

Euphonic. *adj.* Having euphony as its result; causing harmony in language.

These abbreviations are generally the result of a euphonic process.—*Dr. E. G. Latham, Elements of Comparative Philology.*

Euphonic. *adj.* According to the laws of euphony; harmonious; smooth-sounding.

Euphonic languages are not necessarily easy of acquisition. The Fin, in which it is rare to find two concurrent consonants in the same syllable, is too fine and delicate for remembrance. The mind was a consonantal combinations, or something equally definite to lay hold of.—*Dr. E. G. Latham, Elements of Comparative Philology.*

Euphony. *s.* [Gr. φωνή = voice.] Agreeable sound; contrary to harshness.

Had the Grecians been as careless of euphony and polishing their words in the terminations, as they have been in the initial syllables, their language had been as much inferior to some others in euphony, as now it is esteemed more pleasant and graceful.—*Dalgarno, Didacticus philosophia*, p. 114: Ox. 1680.

In verse there is more care of euphony in every part.—*Instructions for Oratory*, p. 138: Ox. 1682.

Euphrasy. *s.* Herb so called; eyebright: (*Euphrasia officinalis*, a plant supposed to clear the sight).

Then purg'd with euphrasy, and rue,
The vision waver'd; for he had much to see;
And from the well of life three drops install'd.

Euphuism. *s.* [Gr. εὖ = well, φῆμι = nature, temper.] Affected and pedantic manner of using words which was in vogue at the end of the sixteenth century: ('England and his Euphuus' being the title of a well-known and influential work by the early dramatist Lyly).

The singular affectation known by the name of euphuism was, like some other celebrated absurdities, the invention of a man of true genius, John Lyly, noticed above as a dramatist and poet the first part of whose prose romance *Euphuus* appeared in 1578 or 1579. 'Our nation,' says Sir Henry Blount, in the preface to a collection of some of Lyly's dramatic pieces, which he published in 1632, 'are in his debt for a new English which he taught them.' 'Euphuus and his England' began first that language; all our ladies were then his scholars; and that beauty in court which could not speak euphuism—that is to say, who was unable to converse in that pure and refined English which he had formed his work to be the standard of—was as little regarded as she which now there speaks not French.

The discourse of Sir Perrie Shanton, in 'The Monastery,' is rather a caricature than a fair sample of euphuism. . . . Perhaps, indeed, our language is, after all, indebted to this writer and his euphuism for not a little of its present euphony. From the strictures *Shakespeare*, in 'Love's Labour's Lost,' makes *Holofernes* pass on the mode of speaking of his euphuist, Don Adriano de Amalio, 'a man of free-new words, fashion's own knight, that hath a mint of phrases in his brain—one whom the music of his own vain tongue doth ravish like ravishing harmony'—it should almost seem that the now universally adopted pronunciation of many of our words 'child of fancy,' 'I abhor such fanciful fantasies, such insensible and point device companions, such rappers of orthography as to speak donk, fine, when he should say donk; dot, when he should pronounce dot; d, e, h, f, not d, e, f, he clepeth a calf, calf, half, half; neighbour, neighbour, neighbour, neighbour; this is abominable (which he would call abominable); it is unmatchable; here, however, the all-swinging poet laughs rather at the pedantic schoolmaster than at the fantastic knight; and the euphuistic pronunciation which he makes *Holofernes* so malignantly criticise, was most probably his own and that of the generality of his educated contemporaries.—*Craik, History of the English Language*, I. 471-3.

Euphuist. *s.* One who affects Euphuism.

(For example see extract under preceding entry.)

Euphuistic. *adj.* Having the character of Euphuism.

(For example see extract under Euphuism.)

Eurythmy. *s.* [Gr. εὐρύθμια = rhythm.] Harmony; regular and symmetrical measure. *Rare.*

Eutaxy. *s.* [Gr. εὐταξία = arrangement.] Established order. *Rare.*

Euthanasia. *s.* [Gr. θάνατος = death.] Easy happy death.

Let me prescribe and commend to thee, my son, this true spiritual means of thine happy euthanasia, which can be no other than this faithful disposition of the labouring soul, that can truly say, I know whom I have believed.—*Bishop Hall, The Comforter*. I ask not to live, O Hebe! give me but gentle death: euthanasia, euthanasia, that is all I implore.—*Talbot*, no. 44.

A recovery, in my case, and at my age, is impossible: the kindest wish of my friends is euthanasia.—*Arbuthnot*.

Our life cannot be pronounced happy, till the last scene is closed with ease and resignation; the mind still continuing to preserve its usual dignity, and falling into the arms of death, as a wearied traveller sinks into rest. This is that *euthanasia* which *Augustus* often desired, which *Antoinette* *Mus* enjoyed, and for which every wise man will pray.—*Lord Orrey on Swift*, p. 168.

Which is really unmet is not beyond doubt. Porson might possibly make a case in favour of the words in question meaning *copyists* rather than *copies*; but, even then, *transfere* is a strange word in a question between book and book.

in the first place, *ever* and *each*; the latter
being so much disguised as to make its
reality, on the first view, problematical.
The older form, *everich*, however, shows
that a *k* has been softened down, whilst
such and *which*, as compared with the
Scottish *srilk* and *whilk*, explain the loss of
the *l*, *each* being the A.S. *ele*.]

But this is itself a compound; and not
only that, but one in which the *en-* in *ever*
reappears: *ele*—the root of *en-er* in a con-
tracted form + *like*. See *Such* and *Which*.
Hence, in *every*, the same root appears
twice; the result being four elements in
three syllables.

The *ev-*, in *ev-er*, is the *ev-* in *ev-en*;
for which see *Either*. The union at the
bottom of all its meanings is *time*, or *con-
tinuance*; a notion which is clear enough
in *ever*, and not very obscure in *even*.
When we say '*even*' though you are tired
you must go on,' and the like, we mean
that, notwithstanding certain reasons to
the contrary, reasons in favour of your
resting or stopping, the original necessity
of proceeding still *continues*. And in the
word under notice *ever the like* means so
long as the *likeness* lasts the necessity of
going on with it exists also. That *ever*
and *even* are in the same relation to one
another as *there* and *then*, cannot here be
shown in detail. All that is noted is the
fact of the *r* and *a* being no parts of the
original root.

In import, *any*, *each*, and *every* are al-
lied. All mean both *one* and *all*. *Any*
is simply a derivative of *one*—*one*; but
any *one* individual taken from a class in-
differently, and said to have certain qual-
ities, tells us that those qualities are shared
by the class in general. *Each*, which, as
far as the element *the like* goes, is singular,
suggests plurality, inasmuch as a series of
individuals is taken in order. *Every*, in
which the singular element *the like* also
enters, differs from *each* only in giving less
prominence to selection of the individual.
Hence, *any* takes its meaning from the
notion of *indifference*; *each* from that of
ordinality; and *every* from that of *collec-
tiveness*.

But *every* is never used alone. *Any* and
each can be used alone; but *every* must be
followed by either a substantive or *one*, as
every man, *every one*. This induced the
editor to treat it in his grammar as an ar-
ticle, rather than as an ordinary pronoun,
and as such it is, accordingly, entered
here.]

[the common spelling is *eaves*, which serves to distinguish the word from *eve* = evening; but the refinement, however, if such be the explanation of the spelling, is unnecessary, there being no chance of confusion when the origin of the word from the A.S. *efese* is known, where-in there is not only no *n*, but wherein the *s* belongs to the root and is not the sign of the plural number.] Person who skulks about a house to listen.

Ex. s. Name of the twenty-fourth letter in the English alphabet.

Ex-. *Ex* is the Latin for out, or out of, often with a *privative* sense. It is also the Greek *ἐξ*. In Latin it has two forms, i.e. one consisting of three sounds and two letters, the *ex* (*ks*) being expressed by the compound *ex*, and the other the simply spelt

and simply sounded *e*. In Greek, also, it has two forms; one *ἐξ*, wherein the *ξ*, letter for letter, is (like the Latin) a compendium for *ex*; and another, *ἐκ*. This last is remarkable for being one out of only two Greek words (*ἐκ* = out, being the other) which end in any consonant except *c*, *p*, and *v*. Both, however, are exceptional. Besides *ἐκ*, there are the forms *ἐκ* and *ἐκ*; whilst *ἐκ* is only used when it precedes a consonant, *ἐξ* being used before a vowel. More than this, *ἐκ* is generally preceded the noun it governs, of which it may be considered a part; so that, roughly speaking, neither it nor *ἐκ* breaks the rule as to no word in Greek ending in *c*, or any similar consonant. The Greek *ἐξ* is spelt in English like the Latin, as in *exogen*. The Greek *ἐκ* is spelt with *e*, or as *ec*; the doctrine being that it came to us through the Latin. Hence, what applies to the words now coming under notice, applies also to words like *eccentric*, and a large proportion of the entries under *ec*. Confusion in spelling arises out of all this; since in a word like *Exogen*, for example, there is nothing except our knowledge of its history and the nature of its several elements to tell us whether it be Greek or Latin.

Over and above the forms in *ex* and *ἐκ*, the Greek has the secondary form *ἐκ* = without (rather than simply out), which is even more purely adverbial than the simpler one. And, corresponding with this, it has *ἐκ* = within (from *ἐκ* = in), to match. Most of the derivatives are new words framed for scientific purposes. They run, however, in pairs (*Exogen*, *Endogen*; *Exosmosis*, *Endosmosis*), and are eminently necessary, inasmuch as similar compounds from *in* and *out* in English could not be formed; since it has been seen (see remarks under *Enwrap*) that those two words by no means run parallel in composition.

For certain questions which arise when the second element of the compound begins with *s* (giving the sound of *chs* + *s*) see remarks under *Exul*.

Exacerbation. s. Increase of malignity; augmented force or severity; aggravation of a disease; paroxysm.

The patient may strive, by little and little, to overcome the symptom in *exacerbation*; and so, by time, turn suffering into nature.—*Barrow, Natural and Experimental History*.

Translation of the Bible, p. 12.
One thing is very remarkable in these two pas-
sages, that these parts or verses, which are
about to be pronounced by the priest in a kind of
chant that frequently varies very little from a
monotone, are yet syllabically distinguished by
notes of different musical duration, and this with
such *exactitude* that if we consider them merely as
marks of the length of syllables, and of due pauses,
without any reference whatever to music, they may
be looked upon as good guides to a speaker, or re-
citer of those parts of the service. — *Almon, Essays*
on English Church Music.

I mean to think, after hearing the most regular
life in the world, and establishing the character for
exactitude and punctuality, you were like some
other I know, beginning to play the fool in your

The term *Exanthema* was employed by the ancients to signify any cutaneous eruption, whether acute or chronic, follicle or non-follicle; and a similar extension of its signification is very generally observable among medical writers until the commencement of the last century. The physicians who wrote about the middle, or towards the close, of that century either differed very remarkably as to the diseases which should be ranged under this order, or did not separate them from other follicle or inflammatory complaints. Sauvages was one of the earliest to make the distinction as to classification, and since he wrote they have been variously classed by authors. The follicle *exanthemata* formed the third order of the third class, in the outline published by me in 1822. I divided them into two sub-orders, viz. Browne, Christian Morals*, ii. 3.

Exclude th' interloping rattle from thy ground.
—*Dryden, Virgil's Georgics*.

To stand *excluded* from Rutilia's charms.
—*Id., Knight's Tale*.

Bodies do each singly possess its proper portion,
According to the extent of its mind parts,
And thereby *exclude* all other bodies from that space. —*Locke*.

Though these three sorts of substances do not
exclude one another out of the same place, yet
we cannot conceive but that they must necessarily each
of them *exclude* any of the same kind out of the
same place. —*Id.*

If the church be so unquippably contrived as to
exclude from its communion such persons as are
likely to have great abilities, it should be altered. —*Swift*.

exclusion; because the one kept up the monarchy
still, only passing over one person; whereas the

soon as we had a Jewish king over us. —*Bishop
Burnet, History of his own Time*; an. 1679.

4. Exemption.

Exclusion Bill, depriving James II. of the
succession).

The *Exclusionists* had a fair prospect of success. —*Fox, History of the Reign of King James II.*

The great party which traces its descent through
the *Exclusionists* up to the Roundheads continued,
during thirty years, in spite of royal frowns and po-
pular clamours, to demand a share in all the benefits
of our free constitution for those Irish Papists whom
the Roundheads and the *Exclusionists* had consi-

dered merely as beasts of chase or as beasts of bur-
den. —*Macaulay, History of England*, ch. xvii.

To have defended the ancient and local constitu-
tion of the realm against a seditious populace at one
conjuncture, and against a tyrannical government at
another; to have been the foremost champion of
order in the turbulent Parliament of 1659, and the
foremost champion of liberty in the servile Parlia-
ment of 1683; to have been just and merciful to
Roman Catholics in the days of the Popish plot, and to
Exclusionists in the days of the Igbo House Plot; to
have done all in his power to save both the head of
Stafford and the head of Russell; this was a course
which contemporaries, blinded by passion, and de-
bilitated by names and badges, might not naturally
call heroic, but which deserves a very different name
from the late justice of posterity. —*Ibid.* ch. xxi.

novel so called, published about thirty years
ago when the word was recent).

I am sick of Court Circulars. I loathe haut-tou
intelligence. I believe such words as fashionable,

christian epithets that ought to be banished from
lunatic vocabularies. —*Thackeray, Book of Snobs*,
ch. xiv.

assemblies; taking away their capacities in honour-

But Pyrrhus, from what motive appears not,
retired to Ravenna, renounced his renunciation, and
declared himself a conscientious Monarchist. The
indefatigable pontiff was not content with the mili-
tary terrors of *excommunication* against this double
rebel. In a full assembly of the clergy of Rome,
and of the nearest neighbouring bishops, he heaped
the most vehement anathemas on the head of the new
Judas, and calling for the consecrated wine on the
altar, poured some drops into the ink, and so signed
the *excommunication* with the blood of Christ. It
is to be supposed that the blood of the Redeemer
was re-poured in a less appalling sense than in
later ages, or that the passion of the Pope triumphed
not only over Christian moderation, but over the
strongest religious law? Theodorus was not satis-
fied with the *excommunication* of Pyrrhus, he
excommunicated Paul also. Paul revenged himself
by suppressing the religious worship of the papal

to be secured some of their attendants. —*Milman,

Executive. s. In *Politics*. Executive, as opposed to the deliberative or legislative, element of government: (as, 'the king is the head of the *executive*').

The executive power, and the assemblies which form a portion of the legislative, ought both, in a well-constituted state, to be subordinate to the law. The fashionable phrase of modern constitutions, that every citizen is equal before the law, is a mockery of truth and common sense in all states where there is one set of laws or regulations for the government and its officials, and another for the mass of the people subjected to that government. Until neither rank, or official position, or administrative privileges can be pleaded as a ground of exceptional treatment by the agent of the *executive* in matters of justice, there can be no true civil liberty. Nor runs reform for senate, church, and bar;
In practice, rather than loud precept, wise,
Bids not his tongue, but heart, philosophise:

As joint *exemplar* of his life and verse.

No passage in the (Addison's) Campaign has been more mentioned than the simile of the angel, and let it be first inquired whether it be a simile. A poetical simile is the discovery of a likeness between two actions, in their general nature, dissimilar, or causes terminating by different operations in some resemblance of effect. But the mention of another like consequence from a like cause, or of a like performance by a like agency, is not a simile, but an *exemplification*. . . . When the English are represented as gaining a fortified pass by repetition of attack, and perseverance of resolution; their obstinacy of courage, and vigour of onset, is well illustrated by the sea that breaks with incessant battery the dikes of Holland. This is a simile. But when Addison, having celebrated the beauty of Marborough's army, tells us that 'Achilles was thus formed of every grace,' here is no simile, but a mere *exemplification*. A simile may be compared to lines converging at a point, and is more excellent as the lines converge from a greater distance; an *exemplification* may be considered as two parallel lines, which run on together without approximation, never far separated, and never joined. *Johnson, Lives of the Poets*, Addison.

By frequent *exercitations* we form them within
us.—*Fulton.*

Warburton's Divine Location is also a splendid
instance of this mode of discussion, and of its in-
ability to lead to the truth; in fact, it is an attempt
to adopt the mathematical series of proof, in force-
fulness that the mathematical is sure of the truth
of his definition at each remove, because he creates
it, as he can do, in pure figure and number. . . . The
chief use of this first mode of discussion is to sharpen
the wit, for which purpose it is the best *exercitation*.
—*Coleridge, Table Talk.*

Exergue. s. [Fr.] In Numismatics. See
extract.

The words around the border of the coin form

our study, yet they *exhausted* not all its treasures:
they left a great deal for the industry and sagacity
of after-ages. — *Locke*.

With special reference to the method of
Exhaustion.

The witnesses of whom we are speaking must,
from the nature of the case, be of a kind whose credi-
bility falls materially short of certainty: let us
suppose, then, the credibility of the witness in the
case in question to be no better than that is, let us sup-
pose that in every ten statements which the witness
makes, nine on an average are correct, and one in-
correct. Let us now suppose that there have taken
place a sufficient number of drawings to *exhaust* all
the possible combinations, the witness deposing in
every one. In one case out of every ten in all these
drawings, he will actually have made a false as-
sessment. — *J. S. Mill, System of Logic*, iii. 6.

2. In *Logic* and *Mathematics*. Method by
which a point is proved by showing that
any other alternative is impossible, all the
elements of an apposite argument being
anticipating and exhausted.

The method of *exhaustions* [in mathematics] is a
way of proving the equality of two quantities, by
a reductio ad absurdum; showing that, if one be
either greater or less than the other, there will arise
a contradiction. The method of *exhaustions* was in
frequent use among the ancient mathematicians, as
Euclid, Archimedes, — *Ross, Cyclopedia*, in voce.

3. In *Physics*. Formation of a vacuum.

One powerful airpump may form and maintain a

Now in such exigencies not to need,
Upon my word, you must be rich indeed!
A noble superfluity it craves,

If... that man is to be accounted the most perfect and virtuous who (as Cicero says down) can speak the best and most persuasively on any question whatever that may arise, it may fairly be doubted whether a first-rate man can be a first-rate orator. He may indeed speak admirably in a matter he has well considered; but when any new subject or new point is started in the course of a debate, think he may take a juster view of it at the first glance, on the exigency of the moment, than any one else could, he will not fail, as a man of more superficial elevation, to perceive how impossible it must be to do full justice to a subject demanding more reflection and inquiry.—*Whately, Elements of Rhetoric, introd.*

It is therefore now universally held that a government which unnecessarily exceeds its powers ought to be visited with severe parliamentary censure, and that a government which, under the pressure of a great exigency, and with pure intentions, has exceeded its powers, ought without delay to apply to Parliament for an act of indemnity. *Mansel, History of England, ch. 1.*

A body, by being subtilized, can lose nothing of its corporeity; neither can it barely gain anything but exility; for all degrees of subtilty are essentially the same thing. *Grew.*

It is with great propriety that subtilty, which, in its original import, means exility of particles, is taken, in its metaphorical meaning, for nicety of distinction.—*John A. Lewis of the Exile, Court.*

It is as easy to conceive that an Almighty Power might produce a thing out of nothing, and make that to exist de novo, which did not exist before; as to conceive the world to have had no beginning, but to have existed from eternity.—*South, Sermons*.
It seems reasonable to suppose, how such a multitude comes to make but one idea, since that combination does not always exist together in nature.—*Locke*.

One year is past, a different season!
No further mention of the dead;
Who now, alas, no more is missed
Than if he never did exist. *Swift*.

(See also last extract under next entry.)

Existence. *s.* [Exist diff. from the so called verbal substantives, *am, is, was, be* (see *Am, Be*), in never being used as a copula; and from the derivatives of *ens*, so long as they are other than compound, in suggesting the notion of objective or real, rather than subjective or nominal, being (see *Entity*). The verbal element in *exist* is *sto*—stand, from which *si-sto* is formed by reduplication, the adverbial element being *ex*. In *entity* there is no adverbial element; and the verbal element is *ens*. In *essence*, the verbal element is the same as in *ens*, the adverbial element the same as in the word before us, i.e. the *ex* is a modification of *ex*; having nothing to do with the Latin infinitive *esse*, *Essentia* *essentia* Gr. *ἐσέν*, and, in so far as it denotes an actual power or quality, more nearly allied in import with Existence than with Entity.] State of being; actual possession of being.

The soul, secured in her *existence*, smiles
At the drawn dagger, and dotes its point.

Adrian, Cato.

When a being is considered as possible, it is said to have an essence or nature; such were all things before the creation. When it is considered as actual, then it is said to have *existence* also. *Watts, Logic*.

What does *existence* relative to time imply? It implies, I, that we are unable to realise in thought; on the one side of the relative, either an absolute commencement or an absolute termination of time; as on the other, either an infinite non-commencement, or an infinite non-termination of time.—*Sir H. Hamilton, Discourse*, p. 591.

In the first book we found that all the assertions which can be conveyed by language, express some one or more of five different things; *existence*; order in place; order in time; causation; and resemblance. Of these, causation, in our view of the subject, and being fundamentally different from order in time, the five species of possible assertions are reduced to four. The propositions which affirm order in time, in either of its two modes, co-existence and succession, have formed, thus far, the subject of the present book. And we have now concluded the exposition, so far as it falls within the limits assigned to this work, of the nature of the evidence on which these propositions rest, and the processes of investigation by which they are ascertained and proved. There remain three classes of facts; *existence*, order in place, and resemblance; in regard to which the same questions are now to be resolved. Regarding the first of these, very little needs be said. *Existence* in general, is a subject not for our science, but for metaphysics. To determine what things can be recognised as really existing, independently of our own sensible or other impressions, and in what meaning the term is, in that case,

predicated of them, belongs to the consideration of things in themselves, from which, throughout this work, we have as much as possible kept aloof. *Existence*, so far as logic is concerned about it, has reference only to phenomena; to actual, or possible, states of external or internal consciousness, in ourselves or others. Feelings of sensitive beings, or possibilities of having such feelings, are the only things the *existence* of which can be a subject of logical induction, because the only things of which the existence in individual cases can be a subject of experience. It is true that a thing is said by us to exist, even when it is absent, and therefore is not and cannot be perceived. But even then, its *existence* is to us only another word for our conviction that we should perceive it on a certain supposition; namely, if we were in the peculiar circumstances of time and place, and endowed with the useful perfection of organs. My belief that the Emperor of China exists, is simply my belief that if I were transported to the imperial palace or some of her localities in Peking, I should see him. My belief that Julius Cæsar existed, is my belief that I should have seen him if I had been present in the field of Marsia, or in the senate-house at Rome. When I believe that stars exist beyond the utmost range of my vision, though assisted by the most powerful telescopes yet invented, my belief, philosophically expressed, is, that with still better telescopes, if such existed, I could see them, or that they may be perceived by beings less remote from them in space, or whose capacities of perception are superior to mine. The *existence*, therefore, of a phenomenon, is but another word for its being perceived, or for the inferred possibility of perceiving it. When the phenomenon is within the range of present observation, by present observation we assure ourselves of its *existence*; when it is beyond infer its *existence* from marks or evidences. But what are these evidences but other phenomena; ascertained by induction to be connected with the given phenomenon, either in the way of succession or of co-existence. The simple *existence*, therefore, of an individual phenomenon, when not directly perceived, is inferred from some inductive law of succession or co-existence; and is consequently not amenable to any peculiar inductive principles. We prove the *existence* of a thing, by proving that it is connected by succession or co-existence with some known thing. With respect to general propositions of this class, that is, which affirm the bare fact of *existence*, they have a peculiarity which renders the logical treatment of them a very easy matter; they are generalizations which are sufficiently proved by a single instance. That ghosts, or unicorns, or sen-serpents exist, would be fully established if it could be ascertained positively that such things had been ever once seen. Whatever has once happened, is capable of happening again; the only question relative to the conditions under which it happens is, therefore, not, therefore, as regards simple *existence*, the inductive logic has no tools to utilize.—*J. S. Mill, System of Logic*, ch. xxiv, § 1.

Existency. *s.* Existence.

Nor is only the *existence* of this animal considerable, but many things delivered thereof.—*Sir T. Browne, Vulgar Errors*.

It is impossible any being can be eternal with successive eternal physical changes, or variety of states, or manner of *existence*, naturally and necessarily concomitant unto it.—*Sir M. Hale*.

It is a pleasant story that we know, who are the only imperfect creatures in the universe, are the only beings that will not allow of imperfection. Somebody has taken notice, that we stand in the middle of *existence*, and are by this one circumstance the most unhappy of all others.—*Tulley*, no. 210.

Exist. *adj.* Having being; in possession of being or of existence.

Whosoever sin the sun possessed, whose recess or vicinity doleth the quarters of the year, those seasons were actually *existent*.—*Sir T. Browne, Vulgar Errors*.

The eyes and minds are fastened on objects which have no real being, as if they were truly *existent*.—*Dugles*.

Existential. *adj.* Having existence.

Enjoying the good of existence . . . and the being deprived of that *existential* good.—*Bishop Barlow, Remains*, p. 483.

Existible. *adj.* Capable of existing or of existence. *Rare.*

As though the whole *existimatio* of their wisdom were in jeopardy to be overthrowed, and that ever after they should be counted for very dunces.—*Sir T. More, Utopia*. (Nary by H. and W.)

How this is to be accounted for I know not; but men's *existimatio* follows as according to the company we keep.—*Spectator*, no. 430. (Rich.)

Existing. *part. adj.* Actual; connected with the time being.

Notwithstanding his narrow-minded notions on political matters, his slavish adherence to the Tory party, his bigoted veneration for *existing* things, and hatred of all disaffection, or even discontent, the courage and perseverance which he displayed . . . was not surpassed by the technical ability which he showed.—*Lord Brougham, Historical Sketches of Statutes of the Reign of George III.*, Lord Chief Justice Gibbs.

Exit. *s.* [from the third person singular of the present tense of Lat. *exeo* (*ex* = out, and *eo* = go) = go out; the meaning being 'he' or 'she goes out,' or 'makes an exit.'] Term set in the margin of plays to mark the time at which the player goes off the stage; act of quitting the stage; act of quitting the theatre of life.

All the world's a stage,
And all the men and women merely players;
They have their *exits* and their entrances,
And one man in his time plays many parts.

A reward for fame becomes a man more towards the exit, than at his entrance into life. *Swift*.
Many of our old comrades live a short life, and make a figure at their exit.—*Id.*

Exit. *s.* [from Lat. *exitus*, a substantive from the same origin as the preceding = going out; ongoing; outlet.] Passage out of any place; way by which there is a passage out.

In such a pervious substance as the brain, they might find an easy either entrance or exit, almost every where.—*Glanville*.

Most *exitial* fevers, although not concomitant with the tokens, exanthemata, anthrax, or carbuncles, are to be censured pestilential.—*Harvey, On the Plague*.

Exitious. *adj.* Same as Exitial. *Rare.*

To this end is come that jacking of setting up our images in churches, then jacking harmless, in experience proved not only harmful, but *exitious* and pestilential.—*Hemlock against Idolatry*, pt. iii.

Exode. *s.* [Gr. *ἐξόδος*.] Interlude, or farce, following a tragedy.

The Romans had three plays acted one after another, on the same subject, the first a real tragedy, the second the *Atellana*; the third a satire or *exode*, a kind of farce of one act.—*Lord Karaman*.

Exodus. *s.* [Gr. *ἐξόδος*.] Departure; journey from a place; (the second book of the Pentateuch is so called, because it describes the journey of the Israelites from Egypt).

The men of Hamel date all their publick matters especially from this *exodus*, ungoing forth of the children, setting it down next in the year of our Lord.—*Gregory, Posthuma*, p. 107.

Exody. *s.* Same as Exodus.

In all probability their years continued to be three hundred and sixty-five days, ever since the time of the Jewish exodus at least.—*Sir M. Hale, Origin of Mankind*.

Exogen. *s.* Exogenous plant, tree, or herb. See Exogenous.

Exogenous. *adj.* [Gr. *ἐξω* = out, without, and the root of *γενεω* = be born, become; *γενε* = generation, race; opposed to Endogenous, from *ἐν* = within.] In Botany. Increasing or growing outwardly, i.e. from the axis or centre to the circumference; (*endogenium* meaning the opposite, or growing inwardly, or with a direction towards the centre rather than the circumference. As the *exogenous* flowering plants have two seed-leaves, or cotyledons, and the *endogenous* but one, the terms *exogenous* and *dicotyledonous* coincide; as do *endogenous* and *monocotyledonous*).

In its internal structure the stem of flowering plants is subject to two principal and to several subordinate modifications. The former are well illustrated by such plants as the oak and the cane. . . . A transverse slice of the former exhibits a central substance or pith, an external cellular integument

or bark, having: then a fibrous lining or liber, an intermediate woody mass, and certain fine lines radiating from the pith to the bark, through the wood, and called medullary rays: this is called the *exopneuma* structure. In the cane, on the contrary, neither bark, nor pith, nor wood, nor medullary rays are distinguishable; but the transverse section exhibits a larger number of hollow irregularly arranged, and caused by the action of lenticular, and vascular tissue, and of the mass of woody and cellular substance in which they are imbedded. This kind of structure is named *endopneuma*. . . . According to Dutrochet and others, the pith does not extend into the root of *exopneuma*; and it certainly occurs there, when woody, in very small quantity, if at all. . . . Each zone of the vascular system of an *exopneuma* stem being the result of a single year's growth, it should follow that to count the zones apparent in a transverse section is sufficient to determine the age of the individual tree under examination. . . . In this view of the growth of *exopneuma* the trunk of such plants must consist of a series of arcs, directed from above downwards, and then from within outwards. . . . If Mill's view of the structure of *exopneuma* be correct, they must after a time lose the power of growing, in consequence of the whole of the lower part of their stems being choked up by the multitude of descending woody bundles. The lower part of their bark, too, must be much harder, that is much more filled with woody bundles, than the upper. The hardness of the exterior of palm stems cannot be owing to the pressure of new matter from within outwards, but to some cause analogous to the formation of heart-wood in *exopneuma*.—*Lindley, Introduction to Botany*, b. 1, ch. ii. sect. 11, § 1, 2.

Very few of the genera of plants, or even of the families, can be pronounced with certainty to be kinds. The great distinction of vascular and cellular, dicotyledonous or *exopneuma* and monocotyledonous or *endopneuma*, are perhaps differences of kind; the those of denomination which divide these classes seem (though even on this I would not pronounce positively) to go through the whole nature of the plants. But the different species of a genus, or even of a family, usually live in common only a limited number of characters.—*J. S. Mill, System of Logic*.

Exolate, adj. [Lat. *exolatus*; part. of *exolere* = begin to grow old, or worn out.] Stale. *Rare*.

Exorbitato, v. n. Deviate; go out of the track or road prescribed. *Rare*.
A wise intermixture of some irregularities puts men upon reflection, and gives them to understand, that Nature's ill-shaped letters at one time are an assurance, that she could not write so fairly and evenly as generally, had she not some Great Master to guide her hand, and lend to the power of some causes not to *exorbitate* and fly out.—*J. Spencer, Discourses concerning Prædication*, p. 132, 133.

how few! —*Byron, Childs Harold*, iv. 24.

Brown, Christian Morals*, iii. 6.

passage leading into it.—*Sir T. Brown, Christian*
Morals, iii. 25.

Predially of paragraph and fourth of sentence are

I have been distasteful at this way of writing, by
reason of long prefaces and *exordiums*.—*Addison*,
Discourses on the Usefulness of ancient Studies.

The *exordium* of the National Convention, or Con-
fession of Faith, first subscribed in Scotland in 1793,
and again on many subsequent occasions, will afford
the most apt and complete illustration to my argu-
ment. It runs thus:—We all and every one of us
underwritten, protest, &c.—*Glendon, The State in*
its Relations with the Church, ch. vii.

Exornation, s. [Lat. *ornatus*, pass. part. of
orno = adorn.] Ornament; decoration;
embellishment.

This *exornation* [multiplication] was first devised
and ordained to increase causes, and enrich the oration
with words and sentences.—*Petrarch, Garden*
of Eloquence, sign. N. ii. b. 1577.

It seems that all those *exornations*
should rather cease.—*Hooker, Ecclesiastical Polity*.
Hyperbolic *exornation*, elegance, &c., many
much affect.—*Barton, Anatomy of Metaphors*, to
the reader, p. 14.

Exosmose, s. [Gr. *ἐξω* = out, outwards, with-
out, and *σμός* = impet; in Endosmose,
ἐνσω = in, inwards, within.] See extract.
(Both words, of recent origin, are common
in Physics, *exosmosis* and *endosmosis* being
correlative forms. *Exosmotic* and *Endos-
motic* are derivatives; *Osmotic*, the general
term, being rarer.)

Dutrochet . . . found that small bladders of animal
and vegetable membrane, being filled with a fluid of
greater density than water, securely fastened, and
then thrown into water, acquired weight; he also
remarked that, if the experiment were reversed, by
filling them with water and immersing them in a
denser fluid, the contrary took place, and the blad-
ders lost weight. . . . From these and other experi-
ments, Dutrochet arrived at the inference that, if
two fluids of unequal density are separated by an
animal or vegetable membrane, the denser will at-
tract the less dense through the membrane that
divides them; and this property he calls *endosmose*,
when the attraction is from the outside to the in-
side; and *exosmose* when it operates from the inside
to the outside.—*Lindley, Introduction to Botany*,
ii. 331.

It has been fully established, that fluids may and
do pass into, and out of, the veins in the living body,
not by vital process, but by mere physical im-
bibition and transpiration. . . . That when the veins
are distended to a certain degree with watery fluid,
the entrance of more of the same fluid through
their sides is impeded or prevented. . . . and
that . . . when the veins are comparatively empty,
the surrounding serous fluid passes readily into
them, or, in common language is absorbed. The
885

venous absorption is explicable therefore upon the principles of *exosmosis* and *exosmosis*, as laid down by Dutrochet. *Dr. Watson, Lectures on the Principles and Practice of Physic*, lect. xvi.

Exosésion. *s.* [Lat. *exosésio*, -*osis*; from *ex* = out, *os* = bone.] Depriving of bone or its analogue. *Rare*.

Exotérie. *adj.* Public: (applied to the doubtful doctrine of certain ancient philosophers). See *Esoteric*.

The discourse was perfect, so far at least as the *exotérie* exposition of details succeeded in concealing the real or supposed *esotérie* stream of truth, which certainly was sufficiently concealed. *J. Fisher, Essays*, iii.

Among the habitual dwellers in these delicate halls, there was a tacit understanding, a prevalent doctrine that required no formal exposition, no proofs and illustrations, no comment and no gloss; which was indeed rather a traditional conviction than an important dogma; that the *exotérie* public were on many subjects the victims of very subtle prejudices, which these enlightened persons wished neither to disturb nor to adopt. *Diarrict the young, Comingsby*.

Exotérique. *adj.* Same as *Exotérie*.

Aristotle was wont to divide his lectures and readings into *exotériques* and *esotériques*. Some of them contained only choice matter, and they were read privately to a select auditory; others contained but ordinary stuff, and were promiscuously and in public exposed to the hearing of all that would. *Sir M. Hale, Golden Remains*, p. 149.

Exotery. *s.* What is obvious or common. *Rare*.

Reserving their *esoteries* for adepts, and dealing out *exoteries* only to the vulgar. *Note in Search's Fervid*, &c., p. 172.

Mr. Schlen, the ornament of our nation for *exotick* learning. *Bishop Meade, Episcopacy asserted*, p. 51.

Some learned men treat of the nature of letters as of some remote *exotick* thing, whereof we had no knowledge but by fabulous relations. *Hobbes, Elements of Speech*.

Continue fresh hot-beds to entertain such *exotick* plants as arrive not to their perfection without them. *Evelyn, Calendarium hortense*.

Having examined the means of fertilization in so many British orchids, belonging to fourteen genera, I was anxious to ascertain whether the *exotie* forms, belonging to quite distinct tribes, equally required insect agency. . . . By the kindness of many friends and strangers I have been enabled to examine fresh flowers of several species belonging to forty-three *exotie* genera, well dispersed through the sublimities of the vast orchidic series. *Darwin, Fertilization of Orchids*, ch. v.

Our national solidity never wandered into these *exotie* extravagances. *C. H. Pearson, The early and middle ages of England*, ch. xxiv.

Exotie. *s.* That which is foreign: (generally applied to plants, as opposed to *nutrices*).

Claudian was seated on the other summit, which was barren, and purchased, on some spots, plants that are unknown to Italy, and such as the gardeners call *exoticks*. *Addison, Guardian*.

Exotical. *adj.* Same as *Exotie*. *Rare*.

How many have we seen, and jotted, which have brought nothing from foreign countries but misshapen clothes, or *exotical* gestures, or new manners, or affected lipsm, or the diseases of the place, or (which is worst) the vices! *Bishop Hall, Letters to the Earl of Essex*, ep. 8.

Should they, who have been trained up in so clear a light of the Gospel, begin to cast wanton eyes upon their (the papists') glorious superstitions? and contrary to the law of God, and our sovereign, through their *exotical* devotions? *Id., Remains*, p. 51.

What is the reason that in a box where there are
nine black balls and one white, we expect to draw
a black ball nine times as much (in other words,
nine times as often, frequency being the gauge of
intensity in *expectation*) as a white? Obviously be-
cause the local conditions are nine times as favour-
able, because the hand may alight in nine places
and get a black ball, while it can only alight in
one place and find a white ball. . . . It is, in fact, evident,
that when once causation is admitted as an universal
law, our *expectation* of events can only be rationally
grounded on that law. — *J. S. Mill.*

Expectorant. s. Medicine which promotes
expectoration.

Expectorants are those medicines which rather
promote the secretion of the viscid phlegm with
which the bronchiae are loaded than simply inviscid
or dilute it; though these are also treated as *expec-*
torants by many writers. The list of the proper *ex-*
pectorants employed formerly was very voluminous;
... we see evident proofs of an *expectant* power in
many medicines, as in gum ammoniac, where we
have no proof whatever of increased exhalation from
the surface of the body. — *Mason Good.*

Expédiency. s. Same as Expediency;
(than which, in some senses at least, it is
a commoner word).

Solemn dedication of things set apart for divine
worship, could never have been universally prac-
tised, had not right reason dictated the high *ex-*
pediency and great use of such practices. — *South,*
Sermons.

An instance occurs in Thucydides, in which this
is very judiciously and neatly pointed out: in the
debate respecting the Mityleneans, who had been
slandered after a revolt, when is introduced contend-
ing for the justice of inflicting on them capital
punishment; to which Demosthenes is made to reply,
that the Athenians are not sitting in judgment on
the offenders, but in deliberation as to their own
interest, and ought therefore to consider, not
right they may have to put the revellers to death,
but the *expédiency* or expediency of such a pro-
cedure. . . . Much declamation may be heard in the

present day against *expédiency*, as if it were not the
proper object of a deliberative assembly, and as if it
were only pursued by the unprincipled. — *Whately,*
Elements of Rhetoric, pt. ii. ch. i. § 1, and note.

Expédient. adj. [Lat. *expedire* = fit, suit, be
advantageous: the opposite of *impedio* =

employing certain *expédients* (as money, credit, &c.)
to facilitate the distribution. — *J. S. Mill, System of*
Logic, ii. 482.

This may be called the theory of development;
and, before proceeding to treat of it, two remarks
may be in place. First, it is undoubtedly an hypo-
thesis to account for a difficulty; and such too are
the various explanations given by astronomers from
Ptolemy to Newton of the apparent motions of the
heavenly bodies. But it is as unphilosophical on
that account to object to the one as to object to the
other. . . . Doubtless, the theory of the second and the
theory of development are *expédients*, and so is the
dictum of Vincentius; so is the art of grammar, or
the use of the quadrant; it is an *expédient* to enable
us to solve what has now become a necessary and an
anxious problem. — *W. W. Rieu, Development of Chris-*
tian Doctrine, introd.

The *expédient* adopted showed the urgency of the
danger. — *Leaugh, History of Rome, ch. xlv.*

The king of England wasted the French king's country, and thereby caused him to *expens* such sums of money as exceeded the debt.—*Sir J. Heywood*.**Expensiture. s.** Cost; disbursement.

I cannot forget the joy with which I exchanged a bank-note of twenty pounds for the twenty of the Memoirs of the Academy of Inscriptions; it would have been easy, by any other way, of the same sum, to have procured no larger and lasture a fund of rational amusement.—*Gibbon, Memoirs*, p. 37.

A single dot would overpay

The *expensiture* of every day.—*Comper*. A state cannot have more wealth at its command than may be employed for the general good, a liberal *expensiture* in national works being one of the surest means of promoting national prosperity; and the benefit being still more obvious, of an *expensiture* directed to the purposes of national improvement, but a people may be too rich.—*Southey, Colloquia on Society*.

To raise its body through a given space, its muscles have to be contracted with twice the intensity, at a double cost of matter expended. This necessity will be seen still more clearly if we leave out the motor apparatus, and consider only the forces required and the means of supplying them. For since, in similar bodies, the areas vary as the squares of the dimensions, and the masses vary as the cubes; it follows that the absorbing surface has become four times as great, while the weight to be moved by the motor absorbed has become eight times as great. If then, at twice as much nutriment as was needed for *expensiture*, this having one-half for growth, it is now able only just to meet *expensiture*, and can provide nothing for growth. However great the excess of assimilation over waste may be during the early life of an active organism, we see that because a series of numbers increasing as the cubes, overtakes a series increasing as the squares, even though starting from a much smaller number, there must be reached, if the organism lives long enough, a point at which the surplus assimilation is brought down to nothing—a point at which *expensiture* balances nutrition—a state of moving equilibrium.—*Herbert Spencer, Inductions of Biology*.

Expense. s. Cost; charge; money expended.

As a party man, his character stood lower than it deserved, chiefly from certain personal dislikes towards him; for, with the perhaps doubtful exception of his entire popularity at his party *expens* on the two occasions already mentioned, and of the much more serious charge against him of betraying his party in the Carlton House negotiation of 1812, there can nothing be laid to his charge as inconsistent with the rules of the strictest party duty and honour.—*Lord Brougham, Historical Sketches of Statesmen of the Reign of George III.*, Mr. Sheridan.

cal Sketches of Statesmen of the Reign of George III., Mr. Sheridan.

Expensful. adj. Costly; chargeable: (Expensive commoner).

Expensive. adj.

Experience is the daughter of time.—*Dr. H. More, Disc. of Christian Picty*, p. 164.

But if you'll prosper, mark what I advise.

Whom age and long experience render wise. *Pope*.

The laws of mind . . . compose the universal or abstract portion of the philosophy of human nature; and all the truths of common experience, constituting a practical knowledge of mankind, must, to the extent to which they are truths, be results or consequences of these. Such familiar maxims, when collected a posteriori from observation of life, occupy among the truths of the science the place of what, in our analysis of induction, have so often been spoken of under the title of empirical laws. . . .

The observations concerning human affairs collected from common experience, are precisely of this nature. Even if they were universally and exactly true within the bounds of experience, which they never are, still they are not the ultimate laws of human action; they are not the principles of human nature, but results of those principles under the circumstances in which mankind have happened to be placed. When the Philosopher said in his wrath that all men are liars, he enumerated what is true of all men; but he did not say that all men are liars; and it is not a law of man's nature to lie; though it is one of the consequences of the laws of human nature, that lying is nearly universal when certain external circumstances exist universally, especially circumstances productive of habitual distrust and fear. When the character of the old is asserted to be cautious, and of the young impetuous, this, again, is but an empirical law; for it is not because of their youth that the young are impetuous, nor because of their age that the old are cautious. It is chiefly, if not wholly, because the old, during their many years of life, have generally had much experience of its various evils, and having suffered or seen others suffer much from imprudent exposure to them, have acquired associations . . . to the circumstance . . . while the young, as well from the absence of . . . far experience as from the greater strength of the impressions which urge them to enterprise, escape themselves in it more readily. Here, then, is the explanation of the empirical law: here are the conditions which ultimately determine whether the law holds good or not. *J. S. Mill, System of Logic*, b. i. ch. v. § 1.

3. Individual or particular instance of trial or observation.

Ordinarily all proverbs are very true, being certain brief sentences collected out of long and direct experience. *Sheldon, Translation of Don Quixote*, p. 161.

Experience. n. a. Try; practise; know by practice. See Experiment.

This, according to the view entertained by Curtius, and by several other writers, both ancient and modern, would be the first indication of an unalloyed change which was beginning to show itself in Alexander's character: an effect, either of his interrupted prosperity, or, as others have conceived, of the partial failure and disappointment which he had experienced in India.—*Thirlwall, History of Greece*, ch. liv.

Experienced. part. adj. Provided with the data of, taught or made sagacious or skillful by, experience.

O friend, what narrow dash thou bring'st to mind! *Pope*.

Experiencer. s. One who experiences; (in the following extract, Experimenter).

A curious experience I did admit, that the likeness of any object, if strongly exhibited, will appear to another in the eye of him that looks strongly and steadily upon it, till he be dazzled by it; even after he shall have turned his eyes from it.—*Sir E. Dwyer, Treatise on the Nature of India*.

Experienc'd. adj. Having experience; (Experienced commoner).

Experiential. adj. Derived from experience; empirical; (as opposed to Necessary or Intuitive).

It is evident that this distinction of necessary and experiential truths involves the same antithesis which we have already considered:—the antithesis of thoughts and things. Necessary truths are derived from our own thoughts; experiential truths are derived from our observation of things about us. The opposition of necessary and experiential truth is another aspect of the fundamental antithesis of philosophy.—*Wheatell, History of Scientific Ideas*, l. 27.

Vol. I.

Experiment. s.

1. Trial or test of anything; something done in order to discover an uncertain or unknown effect.

That which sheweth them to be wise, is the gathering of principles out of their own particular experiments; and the framing of our particular experiments, according to the rule of their principles, shall make us such as they are. *Hooker, Ecclesiastical Polity*.

It is good also not to try experiments in states, except the necessity be urgent, or the utility evident. *Bacon*.

Till his fall, man's mind was ignorant of nothing but of sin; or at least, it rested in the notion without the smart of the experiment. *South, Sermons*.

When we are searching out the nature or properties of any being by various methods of trial, this sort of observation is called experiment. *Watts, Improvement of the Mind*.

2. Special act of experience.

Adam! by said experiment I ken

How little weight with thee my words can find. *Milton, Paradise Lost*, x. 367.

To have had many experiments is what we call experience.—*Hobbes, On Human Nature*, ch. iv. § 2.

In the earlier writers, *experiment*, both as a noun and a verb, more closely coincided with *experience* than it does now.

And that on good grounds. An *experiment*, at present, means a special observation in which the conditions are determined by the observer or experimenter, instead of one, which is taken as the ordinary course of nature presents it. To make this synonymous with the abstract *Experience* is inconvenient; but, on the other hand, it is exceptional to make the abstract *experience* serve for concrete instances, and become plural. Still, *experience* is the term which gains ground.

And moreover, in respect of the medical profession, there is an obvious danger of a man's being regarded as a dangerous *experimentalist* who adopts any novelty, and of his thus losing practice even among such as may regard him with admiration as a philosopher.—*Whately, Elements of Rhetoric*, pt. i. ch. in § 2.

Experimentally. adv. In an experimental manner; by experience; by trial; by experiment; by observation.

Solid divines *experimentally* know what belongs to the healing of a sinful soul.—*Bishop Hall, Reformation*, p. 110.

While Flarrow was an isle, the true distance between it and the city, as it hath been usually and *experimentally* ascertained, was about seven furlongs. *Corydon, Poethuma*, p. 23.

The intercourse being sometimes universal, has made no impart what we have *experimentally* learned by our own observations.—*Keight, Caladonian herbarium*.

While the man is under the scourge of affliction, he is willing to endure those sins which he now *experimentally* finds attended with such bitter consequences.—*Rogers, Sermons*.

Paralytic discovered by experiment that voltaic electricity could be evolved from a natural magnet, provided a conducting body were set in motion at right angles to the direction of the magnet; and, this he found to hold not only of small magnets, but of that great magnet, the earth. The law being thus established *experimentally*, that electricity is evolved, by a magnet, and a conductor moving at right angles to the direction of its poles, we may now look out for fresh instances in which these conditions meet. *J. S. Mill, System of Logic*.

Experimentarian. adj. and s. Adept in experiments.

Another thing that disposes an *experimentarian* philosopher to embrace religion is that his genius and course of studies accustom him to value and delight in abstracted truths. *Boyle, Works*, v. 22. (Rich.)

Another thing that qualifies an *experimentarian* for the reception of revealed religion is, &c.—*Ibid.* p. 537. (Rich.)

Experimentation. s. Exercise or practice in experiment.

Further, even if we could have ascertained, by the method of agreement, that oxygen and hydrogen were both present when water is produced, no *experimentation* on oxygen and hydrogen separately, to knowledge of their laws, could have enabled us deductively to infer that they would produce water. We require a specific experiment on the two combined. *J. S. Mill, System of Logic*, b. iii. ch. x. § 4.

Thus far the advantages of *experimentation* over simple observation is universally recognised: all are aware that it enables us to obtain numerous conditions of circumstances which are not to be found in nature, and so add to nature's experiments a multitude of experiments of our own.—*Ibid.* b. iii. ch. vii. § 3.

Experimentator. s. Experimenter.

The examination of some of them was protracted for many days, the nature of the experiments themselves and also the design of the experiments requiring such class.—*Boyle, Works*, iv. 307. (Rich.)

Experimented. part. adj. Experienced; tried. *Obsolete*.

Let the orations of wise princes, or *experimental* counsellors in council or parliament, and the final sentences of grave and learned judges in weighty

possible that all the experiments which have been tried, might have been produced by the mere desire to ascertain what would happen under certain circumstances, without any previous conjecture as to the result; yet in point of fact those unobvious, delicate, and often cumbersome and tedious processes of experiment, which have thrown most light upon the general constitution of nature, would hardly ever have been undertaken by the persons or at the time they were, unless it had seemed to depend on them whether some general doctrine or theory which had been suggested, but not yet proved, should be admitted or not. If this be true even of merely *experimental* inquiry, the conversion of *experimental* into deductive truths could still less have been effected without three temporary assistance from hypotheses. *J. S. Mill, System of Logic*, § 5.

Experimentalist. s. One who makes experiments.

It was usual, we are told, with the *experimentalists* in physics in the last age, to labour their experiments with the most diligent exactness. *Bishop Bergeon, On the Divinity of Christ*, p. 21; 179.

If a bird is taken from a cage, and instantly plunged into carbonic acid gas, the *experimentalist* may be fully assured (at all events after one or two repetitions) that no circumstance capable of causing suffocation had supervened in the interim, except the change from immersion in the atmosphere to immersion in carbonic acid gas.—*J. S. Mill, System of Logic*.

And that on good grounds. An *experimentalist*, at present, means a special observation in which the conditions are determined by the observer or experimenter, instead of one, which is taken as the ordinary course of nature presents it. To make this synonymous with the abstract *Experience* is inconvenient; but, on the other hand, it is exceptional to make the abstract *experience* serve for concrete instances, and become plural. Still, *experience* is the term which gains ground.

More, Relation of a Voyage to the Coast of Africa and the Great Asia*, p. 182.

Experiment. n. n. Make experiment.

The plan to which I allude is, that when any subject becomes incommensurate by the inductive method, whether from the impossibility of *experimenting* upon it, or from its extreme natural complexity, or from the presence of immense and bewildering details collected around it, we may, in all such cases, make an imaginary separation of inseparable facts; and reason upon trains of events which have no real and independent existence, and which are nowhere to be found except in the mind of the inquirer.—*Buckle, History of Civilization in England*, vol. ii. ch. vi.

Experimental. adj. Pertaining to, built upon, or known by, experiment; formed by observation.

When engaged in the investigation of table-turning, I constructed a very simple apparatus, serving as an index, to show the unconscious motions of the hands upon the table. The results were either that the index moved before the table, or that neither index nor table moved; and in numerous cases all moving power was annihilated. A universal objection was made to it by the table-turners. It was said to paralyze the powers of the mind; but the experimenters need not see the index.—*Foraday, Lectures on Mental Education*.

Uniformity in religious and ecclesiastical matters sure is an excellent and desirable gain, that certainly an establishment, somewhat less perfect, with 'being of the same mind as far as we have attained,' and with a regular and effectual observation of good laws, is more *expetible* than an appointment in some circumstances more perfect, without the same uniform order and power therewith. *Poller, Moderation of the Church of England*, p. 410.

—*Boyle*.

Ex- Over and above the remarks made on Ex- as a prefix, the present complication needs notice. It presents itself when the second element of any compound begins with the sound of *s*. As *ex* (*eks*) ends in this, two *ss* come together. Furthermore; *e* before a small vowel is sounded as *s*; hence *centre* preceded by *ce-* or *ex-* is in the same condition as if it were spelt *scentre*. So is *se;* *scripte* being sounded as if written either *ceptre* or *septe*. To write these sounds of *s* in full has often been considered superfluous; the result being that, in many words, no difference is made between *ex-* followed with a vowel, and *ex* followed by *s*. This is the case when *ex-solution* is spelt *ex-solution*. As a matter of etymology, the latter form is, of course, objectionable. In practice, too, it has a tendency to prove mischievous. *Ex*, as a matter of pronunciation, is generally, when followed by a vowel, sounded as *e + g + z*. Nine men say *Aly-zander* for one who says *Alexander* (*Alexander*). Now, the spelling which encourages this is bad. Hence, in many cases, even when the examples go the other way, the entries in the present edition preserve the *s* wherever the custom of omitting it has not become too inveterate to be set aside, or the word be rare.

Perhaps the *spur of the moment* is the best approximate translation of it, regard being had to the sense it bears in English. The extract from Dryden is simply a translation of *ex tempore ciris*: just as the occasion prompts. It is a Latin rather than an English word; or rather it is a pair of words, like *a priori*, *a posteriori*, and others which can scarcely be dispensed with, and which, in English, we must treat as single words.

As a part of speech, *extempore* is, in the first instance, an adverb. Its use as an adjective is condemned by Johnson, who cites the authority of Addison only. The addition of that of Dryden is Todd's. The recognition of it as a substantive is Todd's. That it is all three is beyond doubt. For further remarks see the observations on Contemporary.]

Dryden, Persius's Satires.

My regret when, under the most melancholy circumstances, I ascertained what had occurred was serious indeed; and my resolution never again to make acquaintance *extempore*, was coupled with the conviction that a practical joke is, in fact, no joke at all;—and yet, such is the influence of agreeable manners and lively conversation, that I am subsequently become my greatest friend, at least in the worldly acceptance of that most equivocal word.—*Thomson Hook, Gilbert Gurney*, vol. Normal psychology can be constructed save on the basis of some acknowledged relation between thought and the subject-matter of thought between mind and nature. No explanation whatever can be given of any act of intelligence, but what implicitly affirms or denies certain ontological propositions. Hence, unless some such propositions can be established, no superstructure of sciences is possible. This must remain true, whatever be the special character of the psychology to be developed. Is it realistic? Its argument may be taken in flank by a denial of the *externality* of things. If it be any elaboration of idealism, it takes for granted mind and personality, and is liable to sceptical criticism on these assumptions. If it be argued that this is assumed of course, and that it therefore is superfluous to note them, I cannot assent to this explanation of their absence; and seeing that 'forbiter,' 'lapper,' 'thirster,' and other little-used words of the same formation, are introduced, there is at least an inconsistency in omitting these, as they have been omitted by tens and by hundreds. . . . As, however, the quantity of iron required for ship-building forms but a small part of the total quantity required for all purposes, the extra demand on the iron-makers can be nothing like so great in proportion as is the extra demand on the ship-builders. Extractive. *s.* In Chemistry. See example.

The older apothecaries used this term [extract] to designate the product of the evaporation of any volatile juice, infusion, or decoction, whether the latter two were made with water, alcohol, or ether; whence arose the distinction of aqueous, alcoholic, and ethereal extracts. Pharmacy made many reserves upon these preparations, and supposed that they had all a common basis, which he called the *extractive* principle. But Chevreul and other chemists have since proved that this pretended principle is a heterogeneous and very variable compound. By the term *extract*, therefore, is now meant merely the whole of the soluble matters obtained from vegetables, reduced by careful evaporation to either a pasty or solid consistence. The watery extracts, which are those most commonly made, are as various as the vegetables which yield them; some containing chiefly sugar or gum in great abundance, and are therefore innocent or inert; while others contain very energetic ingredients. The conduct of the evaporating heat is the capital point in the preparation of extracts. - *Encyclopaedia of Arts, Manufactures, and Mines*, Extract.

Notwithstanding the extreme diversity of the facial parts of the skull in the order Bruta, the marks of inferiority of position in the mammalian series, according to the cranial character, are constant throughout. The terminal position of the occipital condyles and the aspect of the occipital surface, the degree in which the parts of the complex temporal bone of higher mammals retain their primitive separation, the position of veins radiating from the cerebral sinuses, the low facial angle and small proportional size of the cranial cavity, the small share in which the squamous contributes to its walls—all exemplify the inferiority of the present mammalian group of animals to the cynocephalous ungulates.—*Owen, Anatomy of Vertebrates*.

Fact, *s.* [Lat. *factum*.] Effect produced; action; deed: (common as the element of a contrast, a matter of *fact* being opposed to one of law; *facts* being opposed to fancies, fictions, or theories, and the like).

We have spoken of the common opposition of theory and *fact* as important, and as involving what we have called the Fundamental Antithesis of Philosophy. But after all, it may be asked, is the distinction of theory and *fact* a real one? Is it a mere verbal distinction? —*Author of a special part of knowledge*.

theory that the earth is a globe revolving on its axis? Is it a *fact* or a theory? that the earth travels in an ellipse round the sun? Is it a *fact* or a theory that the sun attracts the earth? Is it a *fact* or a theory that the loadstone attracts the needle? In all these cases, probably some persons would answer one way, and some persons the other. There are many persons by whom the doctrine of the globular form of the earth, the doctrine of the earth's elliptical orbit, the doctrine of the sun's attraction on the earth, would be called theories, even if they allowed them to be true theories. But yet if each of these propositions be true, is it not a *fact*? ... It would seem, then, that we cannot in such cases expect general assent, if we say, 'This is a *fact* and not a theory,' or 'This is a theory and not a *fact*.' And the same is true in a vast range of cases. It would seem, therefore, that we cannot rest any reasoning upon this distinction of theory and *fact*, and we cannot avoid asking whether there is any real distinction in this antithesis, and if so, what it is. To this I reply: the distinction between theory (that is, true theory) and *fact*, is this: that in theory the ideas are considered as distinct from the *facts*; in *facts*, though ideas may be involved, they are not, in our apprehension, separated from the sensations. ... A person to whom the grounds of believing the earth to travel round the sun are as familiar as the grounds for believing the movements of the mail-coaches in this country, looks upon the former even as a *fact*, just as he looks upon the latter events as *facts*. And a person who, knowing the *fact* of the earth's annual motion, refers it distinctly to its mechanical causes, conceives the sun's attraction as a *fact*, just as he conceives as a *fact* the action of the wind which turns the sails of a mill. He cannot see the force in either case; he supplies it out of his own ideas. And thus, a true theory is a *fact*; a *fact* is a familiar theory. That which is a *fact* under one aspect, is a theory under another. The most venerable theories when firmly established are *facts*; the simplest *facts* involve something of the nature of theory. Theory and *fact* correspond, in a certain degree, with ideas and sensations, as to the nature of their opposition. ... We are often told that such a thing is a *fact*; a *fact* and not a theory, with all the emphasis which, in speaking or writing, tone or italics or capitals can give. We see from what has been said, that when this is urged, before we can estimate the truth, or the value of the assertion, we must ask to whom is it a *fact*? —*Whewell, History of Scientific Ideas*, vol. I. pt. I. b. l. ch. I. § 10.

In *fact* = in reality, as opposed to supposition or speculation.

If this were true in *fact*, I do not see any colour for such a conclusion. —*Addison, Present State of the War*.

Man has a *facility* of apprehending time, and a *facility* of reckoning numbers: are these distinct, or are they *faculties* derived from the other? To analyze the various combinations of our ideas and observations into the original *faculties* which they involve; to show that these *faculties* are original, and not capable of further analysis; to point out the characters which mark these *faculties* and lead to the most important features of our knowledge; these are the kind of researches on which we have now to enter, and these, we trust, will be found to be far from idle or useless parts of our plan. If we succeed in such attempts, it will appear that it is by no means a frivolous or superficial step to distinguish separate *faculties* in the mind. If we do not learn much by being told that we have a *facility* of forming the idea of space, we at least, by such a common-sense, circumscriptive, certain portion of the field of our investigations, which, we shall afterwards endeavour to show, requires and rewards a special examination. And though we shall thus have to separate the domain of our philosophy into many provinces, these are, as we trust it will appear, neither arbitrarily assigned, nor vague in their limits, nor infinite in number.—*Whewell, History of Scientific Ideas*, vol. i. pt. i. b. i. ch. vi. § 3.

That many terms of art and manufacture are omitted, must be frankly acknowledged; but for this defect I may boldly allege that it is avoidable; I could not visit caverns to learn the miner's language, nor take a voyage to perfect my skill in the dialect of navigation, nor visit the warehouses of merchants, and shops of artificers, to gain the names of wares, tools, and operations, of which no mention is found in books; what favourable accident, or easy inquiry, brought within my reach, has not been neglected; but it had been a hopeless labour to glean up words, by counting living information, and contending with the selfishness of one, and the roughness of another. To furnish the ætymologies della Crusca with words of this kind, a series of congeries called by Piero, or the *Fair*, was professedly written by Buonarroti; but I had no such assistant, and therefore was content to want what they must have wanted likewise, had they not luckily been so supplied. — *Johnson, Preface to Dictionary.*

So hane I laboured to do in the person of Arthur; whom I conceive, after his long education by Timon, to whom he was by Merlin delivered to be brought up as soon as he was borne of the Lady Igraine, to have seen in a dream or vision the fairy queen, with whose excellent beauty raptured, he awaking resolved to seek her out; and so being by Merlin armed, and by Timon thoroughly instructed, he went to seek her forth in *ferge land*. — *Spenser, Letter (Prefatory to the Faerie Queene) to Sir W.
